ABSTRACT

This study looks at how using PowerPoint presentations can improve reading comprehension for 7th-grade students at SMPN 50 Surabaya. The research was done in two cycles, each with planning, acting, observing, and reflecting stages. Early findings showed that many students had trouble understanding what they read, so PowerPoint was used as a teaching tool. In Cycle 1, interactive and visual elements were added, but results showed more changes were needed. In Cycle 2, these changes helped make the lessons more engaging and easier to understand. The results showed a significant improvement in students' reading scores, proving that PowerPoint can be a helpful teaching tool for boosting reading skills.
