Dear Editor,

We would like to ask you about our manuscript submitted to your journal.

Article title:

***From Liability Based on Fault Principle Towards Presumption of Liability Principle in Medical Disputes***

Authors:

***Ari Purwadi, Umi Enggarsasi, Suhandi***

Please send the review results form reviewer as soon as possible.

We are looking forward to hearing from you soon.

Sincerely yours,

Ari

## **Abstract**

The Medical Practice Law provides the right to claim a civil suit to the court. In general, compensation claims are based on civil liability using Article 1365 BW. Article 1365 BW contains liability based on errors and it is not easy to determine when professional errors occur. Article 66 paragraph (3) of the Medical Practice Law stipulates that if there is a malpractice event, there is a possibility that the patient has the right to claim a civil suit to the court. The plaintiff (patient) will get compensation if he succeeds in proving the defendant's (doctor's) mistake, which is difficult for the patient to prove the doctor's fault. To provide objective and balanced legal protection for patients and doctors, the use of the presumption principle is always liable because it is difficult to prove the errors of the doctors.

Keywords: fault principle, medical disputes, liability presumptions.

## **Introduction**

In the concept of civil law, compensation can be submitted because there is default or because of an unlawful act. Therefore, the form of responsibility in civil law can be classified into two, namely first, contractual responsibilities, and second, responsibility for unlawful actions. The difference between contractual responsibility and the responsibility for illegal actions is whether or not there is an agreement in legal relations. If there is agreement,

responsibility is contractual responsibility<sup>1</sup> (Agustina et al., 2012; Hernoko, 2016) Whereas if there is no agreement, there are parties who harm other parties with the principle of illegal acts. Examples of unlawful actions are if a surgeon for negligence has left gauze or tools in the patient's body so that the patient has an infection which results in the patient suffering even because the complications that occur cause the patient to die.<sup>2</sup>

In a contractual legal perspective, it is said that "Contract agreement obligation is the primary means for the parties to create their legal norms that will rule the behavior of their own. Rights and obligations arising from the contract are determined by what is mutually agreed (exchanged) by the parties through their statements".<sup>3</sup> The relationship between doctors and patients in the implementation of medical practice is known as legal relations. Legal relations in the context of engagement law constitute an agreement that occurs from the agreement. Therefore the legal relationship between doctors and patients occurs from a therapeutic agreement. The agreement known in the field of health services is a therapeutic agreement (transaction). Therapeutic agreements are agreements between doctors and patients, in the form of legal relationships that cause rights and obligations for both parties. Objects in this agreement are therapeutic efforts for patient recovery.<sup>4</sup> In the therapeutic agreement, both doctors and patients have the rights and obligations that must be fulfilled. The rights and obligations of doctors and patients are regulated in Articles 50 to 53 of Law Number 29 of 2004.<sup>5</sup> Thus, if the therapeutic agreement is not met by a doctor, the patient will claim on the legal basis that there is an omission or error.

In agreement legal theory, there are 2 (two) types of agreements, namely: 1. Business engagement, it is an agreement where each party gives maximum effort to reach the intended agreement. In this case, the priority is business, and 2. Engagement of results, it is an agreement based on agreed results, meaning that each party gives the best effort to achieve what has been agreed. In this case, the priority is results.

In such contractual relationships, there may be achievements provided by service providers that cannot be measured but there are also benefits provided by service providers that can be measured (some of which are generated by businesses). In line with Sidharta, which states that the types of services provided in the relationship between professional service providers and users of professional services can be divided into two types of services: promised services to produce something and services that are committed to striving for something.<sup>6</sup> If the two types of agreements above are linked to a therapeutic agreement, then the therapeutic agreement can be categorized in the business agreement, because the doctor will be difficult or impossible to be required to be able to cure his patients. So what is

demanded from a doctor is maximum effort and earnest in doing healing based on good medical science standards. Likewise for patients, they are required to try to carry out recommendations and doctor's orders so that the pain can be cured. Both parties, namely doctors and patients are required to try as much as possible to cure an illness. Although the legal relationship between the patient and the doctor is not based on the results but rather on the effort that must be made, it is implied that the effort that must be made is an effort that is in accordance with the applicable standards. Even though the legal relationship between doctors and patients is a maximum effort, it is possible for compensation claims to be based on violating the law that the doctor must account for from the aspect of civil law.

Whereas the lawsuit filed under the law violates the law based on Article 1365 BW, generally addressed to doctors who perform medical malpractice. According to Munir Fuady, as quoted by Bambang Heryanto, that malpractice has an understanding that every medical action is carried out by doctors for patients, both in terms of diagnosis, therapy and management of diseases carried out in violation of law, propriety, decency, and professional principles intentional or not intentional or misdirected which causes pain, disability, bodily injury, death and other damage that causes the doctor to be responsible for administrative, civil or criminal responsibility, generally carried out in cases of medical malpractice. Hermien Hadiati Koeswadji quoted the opinion of John D. Blum as saying that medical malpractice is one form of professional negligence that patients can be asked to compensate for in the event of an injury or disability caused directly by the doctor in performing measurable professional actions.<sup>7</sup> In fact, it is not easy to establish the existence of malpractice that there is professional negligence carried out by the doctor at the time of the treatment and there are others who are harmed by the actions of the doctor.

The law does not impose restrictions on illegal acts, which must be interpreted by the court. Initially it was intended that anything that was against the law would be illegal. However, since 1919, a court ruling that has given an understanding that an act or negligence with one of:

- (1) Violates the rights of others
- (2) Contrary to the legal obligations of the perpetrator
- (3) Violating morals is generally adopted from good habits
- (4) Not in accordance with propriety in social life. A doctor can be wrong.

To determine the offender must pay compensation, there must be a close relationship between errors and losses that occur. That in order to be able to claim losses (compensation) due to negligence of the doctor, the patient must be able to prove the following four elements:

- (1) There is an obligation for doctors to service their patients
- (2) Doctors have violated the usual medical service standards

---

<sup>7</sup> Heryanto, B. Malpractice Doctors in Legal Perspectives. (Jurnal Dinamika Hukum, 2010), 10(2), 183-191.

(3) Plaintiffs (patients) suffer losses that can be requested for compensation from pain, disability, bodily injury, death and other damage

(4) The fact that pain, disability, bodily injury, death and other damage is caused by sub-standard actions.

To prove the existence of an action below the standard of health services by the patient (plaintiff) is an effort that is not easy because the patient has no knowledge of it. The case involving Dr. Yenny Wiyarni Abbas, Spa who was sued by Ibrahim Blegur for the death of his son named Ananda Falya Rafani Blegur based on illegal acts for medical treatment. By Dr. Yenny Wiyarni Abbas, Spa was appealed with a lawsuit Number 462/Pdt/2016/PT.BDG and was decided by the Bandung High Court, that Dr. Yenny Wiyarni Abbas, Spa found no errors, because there was no substantial medical evidence.

Based on the description above, legal issues are formulated as follows:

1. What are the elements of liability based on faults in medical disputes?
2. What is the urgency to use the principle of presumption of liability principle to medical disputes?

## **Elements Liability based on fault on Medical Dispute**

Implicitly Article 66 paragraph (1) of Law No. 29 of 2004 concerning Medical Practice explains that medical disputes are disputes that occur because the interests of patients are harmed by the actions of doctors who carry out these medical practices. Medical disputes in health services provide legal consequences that require the responsibility of the doctor. The legal responsibility of a doctor arises when medical negligence occurs with a doctor. The attitude or action can be interpreted as doing something that is not supposed to be done or not doing something that should be done or not doing something that is a reasonable person based on ordinary considerations that generally regulates human events, will do, or have done something natural and heart careful it just won't do. In fact, in handling patients, there is often a different perspective between patients and doctors with lawsuits or claims to doctors who have committed medical negligence (Nasser, 2011).

The aspect of civil law regarding a patient's claim to a doctor who handles it is almost a matter of compensation claims. Article 1365 BW states that every act that violates the law, which brings harm to another person, requires that the person who caused the wrongdoing to issue the loss compensates for the loss. Unlawful acts in its development have developed into 4 (four) criteria,

first, violating the rights of others; or

second, contrary to the legal obligations of the perpetrator; or

third, violating the rules of moral conduct; or

fourth, which contradicts courtesy, carefulness and caution that a person must have in relation to fellow citizens or with other people's property.

If a patient who feels aggrieved wants to file a lawsuit based on an unlawful act against the doctor, then he must prove that there has been an unlawful act with the criteria mentioned above. In addition, patients also have to prove that there is a causal relationship between violating the law and the loss suffered. A claim that is based on an unlawful act can be directed against the perpetrator of the act itself, because he made a mistake, negligence, was not careful which caused harm to others. Claims can also be directed against people responsible for their dependents or their items under their control.

Therefore, the reason for the lawsuit is not appropriate if it is only based on Article 1365 Burgerlijk Wetboek (Indonesian Civil Code), but also based on Article 1366 Burgerlijk Wetboek. This is caused by theory or doctrine, medical malpractice by doctors, consists of three things.<sup>8</sup>

First, Intentional Professional Misconducts, who are found guilty/bad practice if the doctor practices violations of standards and is done intentionally. Doctors practice by ignoring standards and intentional. Practice doctors by ignoring standards in existing rules and there is no element of negligence.

Secondly, Negligence or unintentional negligence, namely a doctor who is due to negligence resulting in a patient's disability or death. A doctor fails to do something that must be done in accordance with medical science. This category of malpractice can be prosecuted, or punished if proven in court.

Third, Lack of Skill, ie doctors take medical action but are incompetent or less competent.

The definition of the element of error referred to in Article 1365 BW based on the concept of civil law about this error can be distinguished between the definition of errors in the broadest sense and understanding errors in the narrow sense. The meaning of error in the broadest sense is to enter intentions and neglect. The meaning of intention is that the action taken is known and desired by the perpetrator. Whereas negligent understanding is an action in which the perpetrator knows the possible consequences that harm others.<sup>9</sup>

Negligence is a form of accidental error, but it is also not something that happens by accident. In this omission, there is no malice from the perpetrator. Negligence in carrying out medical actions causes patient dissatisfaction with doctors in making treatment efforts in accordance with the medical profession. Such negligence causes loss on the part of the patient. Thus, a doctor other than being the subject of civil liability on the basis of default and violating the law can also be prosecuted on the basis of negligence, which results in a loss. The claim on the basis of this negligence is provided in Article 1366 BW, which reads as

---

<sup>8</sup> Wahyudi, S. Hospital Responsibility for Losses Due to Negligence of Health Workers and Their Implications. (Jurnal Dinamika Hukum, 2011), 11(3), 505-521.

<sup>9</sup> Setiawan, R. Principles of Engagement Law. (Binacipta, 2008).

follows: "A person is responsible, not only for damage caused by his actions but also for those caused by negligence or carelessness."

Law Number 36 of 2009 concerning Health regulates matters relating to the issue of negligence of health personnel in Article 29 and Article 58. Article 29 of Law Number 36 of 2009 stipulates that in the case of health workers suspected of committing negligence in carrying out their profession, Such negligence must be resolved before mediation. Article 58 of Law Number 36 Year 2009 regulates the right of every person to claim compensation to someone, health worker, and/or health service provider who experiences loss due to intentional or negligent health services received. Based on this provision, it appears that prosecution is directed at a person, health worker or health provider (hospital). In the context of violating the law, the hospital can be said to be a "participating (guilty)" party. Unlawful acts committed by two or more people cause there are parties who are referred to as participating (participating) guilty. When there are parties declared guilty, then the determination of liability is based on 1. How much each joint actor must compensate for the loss suffered by the injured party (patient) and 2. Determination of the joint actors dividing the burden of losses among them. Regarding the first thing, each actor is liable for the loss for all losses, with the understanding that if one of them has paid, the other is free from the obligation to pay, while in terms of the two obligations each actor is determined by the weight of each mistake.<sup>10</sup>

Meanwhile, based on Law Number 44 of 2009 concerning Hospitals, compensation claims are only addressed to hospitals, which are caused by negligence of health workers in the hospital. If the losses incurred by intentional health workers at the hospital, compensation claims cannot be made to the hospital. The hospital will not be responsible if the loss is caused by an error in the meaning of an intentional health worker in the hospital.<sup>11</sup> The patient will file a lawsuit to the hospital if the patient knows and feels aggrieved by the actions of the health worker in the hospital. It is not easy for patients to state that the loss is caused by the actions of health workers. It can be unfortunate to happen to patients who occur unexpectedly by health workers. Health workers have made appropriate and appropriate efforts, and permanent losses to patients, this does not include negligence of health workers. Therefore the patient must know the medical record so that the form of action taken by the health worker can be known to him.

The burden of proof when applying Article 1365 BW is given to patients or families of patients so that they will have difficulty in proving an element of error with the doctor. Thus, it is necessary to think about the use of other concepts of responsibility, meaning that they are not based on the element of error.

---

<sup>11</sup> Wahyudi, S. Hospital Responsibility for Losses Due to Negligence of Health Workers and Their Implications. (Jurnal Dinamika Hukum, 2011), 11(3), 505-521.

## **The Presumption of Liability Principle in Medical Disputes**

The use of Article 1365 BW gives the position of 2 parties, namely the perpetrator and the victim. The system of proof of the concept of liability based on errors incriminates victims as plaintiffs. The new plaintiff will receive compensation if he succeeds in proving the defendant's wrongdoing. In addition, proof of the element of causality between the act and the loss of the victim is borne by the victim as the plaintiff. This is in accordance with the evidentiary load system regulated in BW, namely Article 1865 BW. The proof system as stipulated in Article 1865 BW is also regulated equally in the Civil Procedure Law, namely Article 163 Herziene Inlandsch Reglement (HIR) or Article 283 Rechtreglement voor de Buitengewesten (RBg).

Filing a claim using Article 1365 BW for civil cases or civil disputes faces juridical weaknesses, namely the burden of proof of the element of error and the causal relationship made by the plaintiff. In a civil case, it is very difficult for the victim when he has to explain scientifically or technically the causal relationship between the defendant's actions (which contain elements of error Article 1365 BW or negligence Article 1366 BW) and the loss of the victim.

Basically, legal protection for doctors and patients is placed in an objective and balanced position. If you use the concept of liability based on errors (Article 1365 BW) it will be very difficult for the position of the patient (victim) to be able to prove the doctor's fault when the doctor does malpractice. According to Peter Mahmud Marzuki, liability is a certain form of responsibility. The definition of liability refers to the position of a person or legal entity that is considered to have to pay compensation after a legal event or legal action. For example, a person or other legal entity for committing an illegal act so that it can endanger the person or other legal entity. The term liability lies in the scope of private law.<sup>12</sup> Therefore, in order to face difficulties in proving errors (including proof of negligence based on Article 1366 BW), then the principle of presumption by liability principle is carried out using the principle of presumption. The principle of presumption of liability principle states that the defendant is always liable, until he can prove that he is innocent. Thus, the burden of proof is with the defendant.<sup>13</sup>

The use of the presumption principle is always liable because it is difficult to prove medical errors or medical negligence to the doctor or hospital. The relationship between the doctor and the hospital is based on the implementation of the task. Thus, patients can also be protected by the burden of liability to the hospital based on the principle of vicarious liability/corporate liability. It is fair and reasonable to impose vicarious liability on employers, because employers are more likely to have the means to compensate victims than employees, a claim has been made as a result of activities carried out by employees on behalf of the employer. Employee activity tends to be part of the business activity of the employer, the employer by hiring employees to carry out activities will create illegal acts based on the

---

<sup>12</sup> Marzuki, P.M. Introduction to Legal Studies. (Kencana, 2008).

<sup>13</sup> Shidarta. Indonesian Consumer Protection Law. (Grasindo, 2009).

risks carried out by the employee, the employee will, to a greater or lesser extent, be under the control of the employer.

The difficulty in proving the existence of malpractice requires complex and complex medical knowledge, and difficulties in obtaining the patient's medical records. The use of the principle of presumption of being always liable will not burden doctors and/or hospitals because it is possible to use the principle of reversing the burden of proof. Thus, doctors and/or hospitals can use the principle of reversing the burden of proof if the doctor and/or hospital do not feel guilty or negligent of malpractice, on the grounds that the doctor and/or hospital have done the job correctly.

The European Group on Tort Law (EGTL) publishes the Principles of European Tort Law (PETL). PETL as a starting point for the future discussion about the possibility of harmonization or even the unification of law violating the law (tort law) in Europe. The PETL text about proof load is described in the provisions set out in Part 2 of Chapter 4 PETL which reads as follows:

Article 4: 201 Reversal of the burden of proving fault in general

(1) The burden of proving fault may be reversed in the light of the gravity of the danger presented by the activity.

(2) The gravity of the danger is determined according to the seriousness of possible damage in such cases as well as the likelihood that such damage might actually occur.

Provisions relating to Article 4: 201 PELT are provisions concerning 'evidence' in Article 2: 105 PETL which states: "Damage must be proved according to normal procedural standards. "The damage is too difficult or too costly".<sup>14</sup>

Ivo Giesen states that the reason for including the principle of the burden of reverse proof in PETL is:<sup>15</sup>

First, trying to improve the plaintiff's position due to unreasonable difficulties for the plaintiff because of the technical complexity of the defendant's activities and difficult facts to prove. Furthermore it is said that the reversal of the burden of proof leads to tightening of responsibility and this must be able to be normatively justified.

Second, that the burden of this reverse proof implies that the court was given discretionary power. In this case, the Dutch legal regulations are full of discretionary authority with the principle of fairness and justice mentioned in Article 150 of the Civil Procedure Code (Wetboek van Burgerlijke Rechtsvordering), which allows Dutch courts to

---

<sup>14</sup> Giesen, I. The Reversal of the Burden of Proof in the Principles of European Tort Law-A Comparison with Dutch Tort Law and Civil Procedure Rules. (Utrecht L. Rev., 2010), 6, 22.

<sup>15</sup> Giesen, I. The Reversal of the Burden of Proof in the Principles of European Tort Law-A Comparison with Dutch Tort Law and Civil Procedure Rules. (Utrecht L. Rev., 2010), 6, 22.

use their discretionary powers, but provides little guidance on the application of provisions intended.

If the principle of the burden of reverse proof is used in medical disputes, the obligation to prove the element of medical error or medical negligence is carried out by the doctor and/or hospital as the defendant. The defendant must show proof that he is innocent or innocent. This manifests distributive justice by using the principle of difference and the principle of equal and fair opportunities, and fulfilling the requirements of good and reasonable intention.

Medical disputes are unpleasant events for doctors. Medical disputes are the occurrence of clinical risks in patients, such as adverse clinical events or medical errors. The Indonesian Medical Council has provided guidelines in the form of Medical Practice Guidelines, Doctors and Dentists in Indonesia, which prevent clinical risk by applying the precautionary principle. The principle of prudence includes (1) trying to remain a good doctor (2) trying to always practice good medicine (3) Coupled with implementing special programs, such as: Patient Safety, Quality Assurance, Continuous Medical Education, Development Continuing Professionals, Sustainable Clinical Risk Management, Medical/Clinical Audit, Performance Audit, Learning from one's own mistakes and those of others.

## **Conclusion**

The use of responsibility based on the principle of error will make it difficult for patients to prove a doctor's or hospital's fault or negligence in the event of malpractice. The use of the presumption principle is always liable for asking for civil liability for doctors and/or hospitals if malpractice occurs will provide legal protection between doctors and or hospitals with patients in proportion and balance.

Doctors and/or hospitals are given the means to prove that they are innocent of malpractice with the principle of the burden of reversed proof. Indeed the use of the principle of the burden of reversing proof will conflict with the principle of presumption of innocence.

However, to protect patients due to unreasonable difficulties for patients due to the technical complexity of doctor's activities and difficult facts to prove, then the courage of judges to use the principle of the burden of reverse proof based on discretion and freedom of judges.

For doctors in conducting medical practice, they must pay attention to the principle of caution by applying guidelines issued by the Indonesian Medical Council.

# From Liability Based on Fault Principle Towards Presumption of Liability Principle in Medical Disputes

## Abstract

The Medical Practice Law provides the right to claim a civil suit to the court. In general, compensation claims are based on civil liability using Article 1365 BW. Article 1365 BW contains liability based on errors and it is not easy to determine when professional errors occur. Article 66 paragraph (3) of the Medical Practice Law stipulates that if there is a malpractice event, there is a possibility that the patient has the right to claim a civil suit to the court. The plaintiff (patient) will get compensation if he succeeds in proving the defendant's (doctor's) mistake, which is difficult for the patient to prove the doctor's fault. To provide objective and balanced legal protection for patients and doctors, the use of the presumption principle is always liable because it is difficult to prove the errors of the doctors.

Keywords: fault principle, medical disputes, liability presumptions.

## Introduction

In the concept of civil law, compensation can be submitted because there is default or because of an unlawful act. Therefore, the form of responsibility in civil law can be classified into two, namely first, contractual responsibilities, and second, responsibility for unlawful actions. The difference between contractual responsibility and the responsibility for illegal actions is whether or not there is an agreement in legal relations. If there is agreement, responsibility is contractual responsibility<sup>1</sup> (Agustina et al., 2012; Hernoko, 2016) Whereas if there is no agreement, there are parties who harm other parties with the principle of illegal acts. Examples of unlawful actions are if a surgeon for negligence has left gauze or tools in the patient's body so that the patient has an infection which results in the patient suffering even because the complications that occur cause the patient to die.<sup>2</sup>

In a contractual legal perspective, it is said that “Contract agreement obligation is the primary means for the parties to create their legal norms that will rule the behavior of their

### Commented [U3]: 1

The introduction should lay the ground-work for why the article is worth reading, and describe where the work fits within the existing literature. Introduce the novel elements of the paper in the introduction, thus providing motivation for the reader to penetrate the main text.

own. Rights and obligations arising from the contract are determined by what is mutually agreed (exchanged) by the parties through their statements".<sup>3</sup> The relationship between doctors and patients in the implementation of medical practice is known as legal relations. Legal relations in the context of engagement law constitute an agreement that occurs from the agreement. Therefore the legal relationship between doctors and patients occurs from a therapeutic agreement. The agreement known in the field of health services is a therapeutic agreement (transaction). Therapeutic agreements are agreements between doctors and patients, in the form of legal relationships that cause rights and obligations for both parties. Objects in this agreement are therapeutic efforts for patient recovery.<sup>4</sup> In the therapeutic agreement, both doctors and patients have the rights and obligations that must be fulfilled. The rights and obligations of doctors and patients are regulated in Articles 50 to 53 of Law Number 29 of 2004.<sup>5</sup> Thus, if the therapeutic agreement is not met by a doctor, the patient will claim on the legal basis that there is an omission or error.

In agreement legal theory, there are 2 (two) types of agreements, namely: 1. Business engagement, it is an agreement where each party gives maximum effort to reach the intended agreement. In this case, the priority is business, and 2. Engagement of results, it is an agreement based on agreed results, meaning that each party gives the best effort to achieve what has been agreed. In this case, the priority is results.

In such contractual relationships, there may be achievements provided by service providers that cannot be measured but there are also benefits provided by service providers that can be measured (some of which are generated by businesses). In line with Sidharta, which states that the types of services provided in the relationship between professional service providers and users of professional services can be divided into two types of services: promised services to produce something and services that are committed to striving for something.<sup>6</sup> If the two types of agreements above are linked to a therapeutic agreement, then the therapeutic agreement can be categorized in the business agreement, because the doctor will be difficult or impossible to be required to be able to cure his patients. So what is demanded from a doctor is maximum effort and earnest in doing healing based on good medical science standards. Likewise for patients, they are required to try to carry out recommendations and doctor's orders so that the pain can be cured. Both parties, namely doctors and patients are required to try as much as possible to cure an illness. Although the legal relationship between the patient and the doctor is not based on the results but rather on the effort that must be made, it is implied that the effort that must be made is an effort that is in accordance with the applicable standards. Even though the legal relationship between doctors and patients is a maximum effort, it is possible for compensation claims to be based on violating the law that the doctor must account for from the aspect of civil law.

<sup>5</sup> Nuryanto, A. 2012. Model of Professional Doctor Legal Protection.

<sup>6</sup> Shidarta. Indonesian Consumer Protection Law. (Grasindo, 2009).

Whereas the lawsuit filed under the law violates the law based on Article 1365 BW, generally addressed to doctors who perform medical malpractice. According to Munir Fuady, as quoted by Bambang Heryanto, that malpractice has an understanding that every medical action is carried out by doctors for patients, both in terms of diagnosis, therapy and management of diseases carried out in violation of law, propriety, decency, and professional principles intentional or not intentional or misdirected which causes pain, disability, bodily injury, death and other damage that causes the doctor to be responsible for administrative, civil or criminal responsibility, generally carried out in cases of medical malpractice. Hermien Hadiati Koeswadji quoted the opinion of John D. Blum as saying that medical malpractice is one form of professional negligence that patients can be asked to compensate for in the event of an injury or disability caused directly by the doctor in performing measurable professional actions.<sup>7</sup> In fact, it is not easy to establish the existence of malpractice that there is professional negligence carried out by the doctor at the time of the treatment and there are others who are harmed by the actions of the doctor.

The law does not impose restrictions on illegal acts, which must be interpreted by the court. Initially it was intended that anything that was against the law would be illegal. However, since 1919, a court ruling that has given an understanding that an act or negligence with one of:

- (1) Violates the rights of others
- (2) Contrary to the legal obligations of the perpetrator
- (3) Violating morals is generally adopted from good habits
- (4) Not in accordance with propriety in social life. A doctor can be wrong.

To determine the offender must pay compensation, there must be a close relationship between errors and losses that occur. That in order to be able to claim losses (compensation) due to negligence of the doctor, the patient must be able to prove the following four elements:

- (1) There is an obligation for doctors to service their patients
- (2) Doctors have violated the usual medical service standards
- (3) Plaintiffs (patients) suffer losses that can be requested for compensation from pain, disability, bodily injury, death and other damage
- (4) The fact that pain, disability, bodily injury, death and other damage is caused by sub-standard actions.

To prove the existence of an action below the standard of health services by the patient (plaintiff) is an effort that is not easy because the patient has no knowledge of it. The case involving Dr. Yenny Wiyarni Abbas, Spa who was sued by Ibrahim Blegur for the death of his son named Ananda Falya Rafani Blegur based on illegal acts for medical treatment. By Dr. Yenny Wiyarni Abbas, Spa was appealed with a lawsuit Number 462/Pdt/2016/PT.BDG and

**Commented [U6]: 1**  
Rewrite it and make it into one whole paragraph

was decided by the Bandung High Court, that Dr. Yenny Wiyarni Abbas, Spa found no errors, because there was no substantial medical evidence.

Based on the description above, legal issues are formulated as follows:

1. What are the elements of liability based on faults in medical disputes?
2. What is the urgency to use the principle of presumption of liability principle to medical disputes?

## Elements Liability based on fault on Medical Dispute

Implicitly Article 66 paragraph (1) of Law No. 29 of 2004 concerning Medical Practice explains that medical disputes are disputes that occur because the interests of patients are harmed by the actions of doctors who carry out these medical practices. Medical disputes in health services provide legal consequences that require the responsibility of the doctor. The legal responsibility of a doctor arises when medical negligence occurs with a doctor. The attitude or action can be interpreted as doing something that is not supposed to be done or not doing something that should be done or not doing something that is a reasonable person based on ordinary considerations that generally regulates human events, will do, or have done something natural and heart careful it just won't do. In fact, in handling patients, there is often a different perspective between patients and doctors with lawsuits or claims to doctors who have committed medical negligence (Nasser, 2011).

The aspect of civil law regarding a patient's claim to a doctor who handles it is almost a matter of compensation claims. Article 1365 BW states that every act that violates the law, which brings harm to another person, requires that the person who caused the wrongdoing to issue the loss compensates for the loss. Unlawful acts in its development have developed into 4 (four) criteria,

first, violating the rights of others; or

second, contrary to the legal obligations of the perpetrator; or

third, violating the rules of moral conduct; or

fourth, which contradicts courtesy, carefulness and caution that a person must have in relation to fellow citizens or with other people's property.

If a patient who feels aggrieved wants to file a lawsuit based on an unlawful act against the doctor, then he must prove that there has been an unlawful act with the criteria mentioned above. In addition, patients also have to prove that there is a causal relationship between violating the law and the loss suffered. A claim that is based on an unlawful act can be directed against the perpetrator of the act itself, because he made a mistake, negligence, was not careful

**Commented [U7]: 1**  
Rewrite it and make it into one whole paragraph

which caused harm to others. Claims can also be directed against people responsible for their dependents or their items under their control.

Therefore, the reason for the lawsuit is not appropriate if it is only based on Article 1365 Burgerlijk Wetboek (Indonesian Civil Code), but also based on Article 1366 Burgerlijk Wetboek. This is caused by theory or doctrine, medical malpractice by doctors, consists of three things.<sup>8</sup>

First, Intentional Professional Misconducts, who are found guilty/bad practice if the doctor practices violations of standards and is done intentionally. Doctors practice by ignoring standards and intentional. Practice doctors by ignoring standards in existing rules and there is no element of negligence.

Secondly, Negligence or unintentional negligence, namely a doctor who is due to negligence resulting in a patient's disability or death. A doctor fails to do something that must be done in accordance with medical science. This category of malpractice can be prosecuted, or punished if proven in court.

Third, Lack of Skill, ie doctors take medical action but are incompetent or less competent.

The definition of the element of error referred to in Article 1365 BW based on the concept of civil law about this error can be distinguished between the definition of errors in the broadest sense and understanding errors in the narrow sense. The meaning of error in the broadest sense is to enter intentions and neglect. The meaning of intention is that the action taken is known and desired by the perpetrator. Whereas negligent understanding is an action in which the perpetrator knows the possible consequences that harm others.<sup>9</sup>

Negligence is a form of accidental error, but it is also not something that happens by accident. In this omission, there is no malice from the perpetrator. Negligence in carrying out medical actions causes patient dissatisfaction with doctors in making treatment efforts in accordance with the medical profession. Such negligence causes loss on the part of the patient. Thus, a doctor other than being the subject of civil liability on the basis of default and violating the law can also be prosecuted on the basis of negligence, which results in a loss. The claim on the basis of this negligence is provided in Article 1366 BW, which reads as follows: "A person is responsible, not only for damage caused by his actions but also for those caused by negligence or carelessness."

Law Number 36 of 2009 concerning Health regulates matters relating to the issue of negligence of health personnel in Article 29 and Article 58. Article 29 of Law Number 36 of 2009 stipulates that in the case of health workers suspected of committing negligence in carrying out their profession, Such negligence must be resolved before mediation. Article 58 of Law Number 36 Year 2009 regulates the right of every person to claim compensation to someone, health worker, and/or health service provider who experiences loss due to intentional or negligent health services received. Based on this provision, it appears that prosecution is

<sup>9</sup> Setiawan, R. Principles of Engagement Law. (Binacipta, 2008).

**Commented [U8]: 1**  
Rewrite it and make it into one whole paragraph

directed at a person, health worker or health provider (hospital). In the context of violating the law, the hospital can be said to be a "participating (guilty)" party. Unlawful acts committed by two or more people cause there are parties who are referred to as participating (participating) guilty. When there are parties declared guilty, then the determination of liability is based on 1. How much each joint actor must compensate for the loss suffered by the injured party (patient) and 2. Determination of the joint actors dividing the burden of losses among them. Regarding the first thing, each actor is liable for the loss for all losses, with the understanding that if one of them has paid, the other is free from the obligation to pay, while in terms of the two obligations each actor is determined by the weight of each mistake.<sup>10</sup>

Meanwhile, based on Law Number 44 of 2009 concerning Hospitals, compensation claims are only addressed to hospitals, which are caused by negligence of health workers in the hospital. If the losses incurred by intentional health workers at the hospital, compensation claims cannot be made to the hospital. The hospital will not be responsible if the loss is caused by an error in the meaning of an intentional health worker in the hospital.<sup>11</sup> The patient will file a lawsuit to the hospital if the patient knows and feels aggrieved by the actions of the health worker in the hospital. It is not easy for patients to state that the loss is caused by the actions of health workers. It can be unfortunate to happen to patients who occur unexpectedly by health workers. Health workers have made appropriate and appropriate efforts, and permanent losses to patients, this does not include negligence of health workers. Therefore the patient must know the medical record so that the form of action taken by the health worker can be known to him.

The burden of proof when applying Article 1365 BW is given to patients or families of patients so that they will have difficulty in proving an element of error with the doctor. Thus, it is necessary to think about the use of other concepts of responsibility, meaning that they are not based on the element of error.

## **The Presumption of Liability Principle in Medical Disputes**

The use of Article 1365 BW gives the position of 2 parties, namely the perpetrator and the victim. The system of proof of the concept of liability based on errors incriminates victims as plaintiffs. The new plaintiff will receive compensation if he succeeds in proving the defendant's wrongdoing. In addition, proof of the element of causality between the act and the loss of the victim is borne by the victim as the plaintiff. This is in accordance with the evidentiary load system regulated in BW, namely Article 1865 BW. The proof system as stipulated in Article 1865 BW is also regulated equally in the Civil Procedure Law, namely Article 163 Herzienne Inlandsch Reglement (HIR) or Article 283 Rechtreglement voor de Buitengewesten (RBg).

Filing a claim using Article 1365 BW for civil cases or civil disputes faces juridical weaknesses, namely the burden of proof of the element of error and the causal relationship

---

<sup>10</sup> Nieuwenhuis, J.H. Principles of Engagement Law. (Faculty of Law, Airlangga University, 1985).

<sup>11</sup> Wahyudi, S. Hospital Responsibility for Losses Due to Negligence of Health Workers and Their Implications. (Jurnal Dinamika Hukum, 2011), 11(3), 505-521.

made by the plaintiff. In a civil case, it is very difficult for the victim when he has to explain scientifically or technically the causal relationship between the defendant's actions (which contain elements of error Article 1365 BW or negligence Article 1366 BW) and the loss of the victim.

Basically, legal protection for doctors and patients is placed in an objective and balanced position. If you use the concept of liability based on errors (Article 1365 BW) it will be very difficult for the position of the patient (victim) to be able to prove the doctor's fault when the doctor does malpractice. According to Peter Mahmud Marzuki, liability is a certain form of responsibility. The definition of liability refers to the position of a person or legal entity that is considered to have to pay compensation after a legal event or legal action. For example, a person or other legal entity for committing an illegal act so that it can endanger the person or other legal entity. The term liability lies in the scope of private law.<sup>12</sup> Therefore, in order to face difficulties in proving errors (including proof of negligence based on Article 1366 BW), then the principle of presumption by liability principle is carried out using the principle of presumption. The principle of presumption of liability principle states that the defendant is always liable, until he can prove that he is innocent. Thus, the burden of proof is with the defendant.<sup>13</sup>

The use of the presumption principle is always liable because it is difficult to prove medical errors or medical negligence to the doctor or hospital. The relationship between the doctor and the hospital is based on the implementation of the task. Thus, patients can also be protected by the burden of liability to the hospital based on the principle of vicarious liability/corporate liability. It is fair and reasonable to impose vicarious liability on employers, because employers are more likely to have the means to compensate victims than employees, a claim has been made as a result of activities carried out by employees on behalf of the employer. Employee activity tends to be part of the business activity of the employer, the employer by hiring employees to carry out activities will create illegal acts based on the risks carried out by the employee, the employee will, to a greater or lesser extent, be under the control of the employer.

The difficulty in proving the existence of malpractice requires complex and complex medical knowledge, and difficulties in obtaining the patient's medical records. The use of the principle of presumption of being always liable will not burden doctors and/or hospitals because it is possible to use the principle of reversing the burden of proof. Thus, doctors and/or hospitals can use the principle of reversing the burden of proof if the doctor and/or hospital do not feel guilty or negligent of malpractice, on the grounds that the doctor and/or hospital have done the job correctly.

The European Group on Tort Law (EGTL) publishes the Principles of European Tort Law (PETL). PETL as a starting point for the future discussion about the possibility of harmonization or even the unification of law violating the law (tort law) in Europe. The PETL

---

<sup>12</sup> Marzuki, P.M. Introduction to Legal Studies. (Kencana, 2008).

<sup>13</sup> Shidarta. Indonesian Consumer Protection Law. (Grasindo, 2009).

text about proof load is described in the provisions set out in Part 2 of Chapter 4 PETL which reads as follows:

Article 4: 201 Reversal of the burden of proving fault in general

(1) The burden of proving fault may be reversed in the light of the gravity of the danger presented by the activity.

(2) The gravity of the danger is determined according to the seriousness of possible damage in such cases as well as the likelihood that such damage might actually occur.

Provisions relating to Article 4: 201 PELT are provisions concerning 'evidence' in Article 2: 105 PETL which states: "Damage must be proved according to normal procedural standards. "The damage is too difficult or too costly".<sup>14</sup>

Ivo Giesen states that the reason for including the principle of the burden of reverse proof in PETL is:<sup>15</sup>

First, trying to improve the plaintiff's position due to unreasonable difficulties for the plaintiff because of the technical complexity of the defendant's activities and difficult facts to prove. Furthermore it is said that the reversal of the burden of proof leads to tightening of responsibility and this must be able to be normatively justified.

Second, that the burden of this reverse proof implies that the court was given discretionary power. In this case, the Dutch legal regulations are full of discretionary authority with the principle of fairness and justice mentioned in Article 150 of the Civil Procedure Code (Wetboek van Burgerlijke Rechtsvordering), which allows Dutch courts to use their discretionary powers, but provides little guidance on the application of provisions intended.

If the principle of the burden of reverse proof is used in medical disputes, the obligation to prove the element of medical error or medical negligence is carried out by the doctor and/or hospital as the defendant. The defendant must show proof that he is innocent or innocent. This manifests distributive justice by using the principle of difference and the principle of equal and fair opportunities, and fulfilling the requirements of good and reasonable intention.

Medical disputes are unpleasant events for doctors. Medical disputes are the occurrence of clinical risks in patients, such as adverse clinical events or medical errors. The Indonesian Medical Council has provided guidelines in the form of Medical Practice Guidelines, Doctors and Dentists in Indonesia, which prevent clinical risk by applying the precautionary principle. The principle of prudence includes (1) trying to remain a good doctor (2) trying to always practice good medicine (3) Coupled with implementing special programs, such as: Patient

Rewrite it and make it into one whole paragraph

Safety, Quality Assurance, Continuous Medical Education, Development Continuing Professionals, Sustainable Clinical Risk Management, Medical/Clinical Audit, Performance Audit, Learning from one's own mistakes and those of others.

## Conclusion

The use of responsibility based on the principle of error will make it difficult for patients to prove a doctor's or hospital's fault or negligence in the event of malpractice. The use of the presumption principle is always liable for asking for civil liability for doctors and/or hospitals if malpractice occurs will provide legal protection between doctors and or hospitals with patients in proportion and balance.

Doctors and/or hospitals are given the means to prove that they are innocent of malpractice with the principle of the burden of reversed proof. Indeed the use of the principle of the burden of reversing proof will conflict with the principle of presumption of innocence.

However, to protect patients due to unreasonable difficulties for patients due to the technical complexity of doctor's activities and difficult facts to prove, then the courage of judges to use the principle of the burden of reverse proof based on discretion and freedom of judges.

For doctors in conducting medical practice, they must pay attention to the principle of caution by applying guidelines issued by the Indonesian Medical Council.

# From Liability Based on Fault Principle Towards Presumption of Liability Principle in Medical Disputes

## Abstract

The Medical Practice Law provides the right to claim a civil suit to the court. In general, compensation claims are based on civil liability using Article 1365 BW. Article 1365 BW contains liability based on errors and it is not easy to determine when professional errors occur. Article 66 paragraph (3) of the Medical Practice Law stipulates that if there is a malpractice event, there is a possibility that the patient has the right to claim a civil suit to the court. The plaintiff (patient) will get compensation if he succeeds in proving the defendant's (doctor's) mistake, which is difficult for the patient to prove the doctor's fault. To provide objective and balanced legal protection for patients and doctors, the use of the presumption principle is always liable because it is difficult to prove the errors of the **doctors**.

Keywords: fault principle, medical disputes, liability presumptions.

JEL Classification:

## Introduction

In the concept of civil law, compensation can be submitted because there is default or because of an unlawful act. Therefore, the form of responsibility in civil law can be classified into two, namely first, contractual responsibilities, and second, responsibility for unlawful actions. The difference between contractual responsibility and the responsibility for illegal actions is whether or not there is an agreement in legal relations. If there is agreement, responsibility is contractual responsibility<sup>1</sup> (Agustina et al., 2012; Hernoko, 2016) Whereas if there is no agreement, there are parties who harm other parties with the principle of illegal acts. Examples of unlawful actions are if a surgeon for negligence has left gauze or tools in the patient's body so that the patient has an infection which results in the patient suffering even because the complications that occur cause the patient to die.<sup>2</sup>

In a contractual legal perspective, it is said that "Contract agreement obligation is the primary means for the parties to create their legal norms that will rule the behavior of their

own. Rights and obligations arising from the contract are determined by what is mutually agreed (exchanged) by the parties through their statements".<sup>3</sup> The relationship between doctors and patients in the implementation of medical practice is known as legal relations. Legal relations in the context of engagement law constitute an agreement that occurs from the agreement. Therefore the legal relationship between doctors and patients occurs from a therapeutic agreement. The agreement known in the field of health services is a therapeutic agreement (transaction). Therapeutic agreements are agreements between doctors and patients, in the form of legal relationships that cause rights and obligations for both parties. Objects in this agreement are therapeutic efforts for patient recovery.<sup>4</sup> In the therapeutic agreement, both doctors and patients have the rights and obligations that must be fulfilled. The rights and obligations of doctors and patients are regulated in Articles 50 to 53 of Law Number 29 of 2004.<sup>5</sup> Thus, if the therapeutic agreement is not met by a doctor, the patient will claim on the legal basis that there is an omission or error.

In agreement legal theory, there are 2 (two) types of agreements, namely: 1. Business engagement, it is an agreement where each party gives maximum effort to reach the intended agreement. In this case, the priority is business, and 2. Engagement of results, it is an agreement based on agreed results, meaning that each party gives the best effort to achieve what has been agreed. In this case, the priority is results.

In such contractual relationships, there may be achievements provided by service providers that cannot be measured but there are also benefits provided by service providers that can be measured (some of which are generated by businesses). In line with Sidharta, which states that the types of services provided in the relationship between professional service providers and users of professional services can be divided into two types of services: promised services to produce something and services that are committed to striving for something.<sup>6</sup> If the two types of agreements above are linked to a therapeutic agreement, then the therapeutic agreement can be categorized in the business agreement, because the doctor will be difficult or impossible to be required to be able to cure his patients. So what is demanded from a doctor is maximum effort and earnest in doing healing based on good medical science standards. Likewise for patients, they are required to try to carry out recommendations and doctor's orders so that the pain can be cured. Both parties, namely doctors and patients are required to try as much as possible to cure an illness. Although the legal relationship between the patient and the doctor is not based on the results but rather on the effort that must be made, it is implied that the effort that must be made is an effort that is in accordance with the applicable standards. Even though the legal relationship between doctors and patients is a maximum effort, it is possible for compensation claims to be based on violating the law that the doctor must account for from the aspect of civil law.

<sup>5</sup> Nuryanto, A. 2012. Model of Professional Doctor Legal Protection.

<sup>6</sup> Shidarta. Indonesian Consumer Protection Law. (Grasindo, 2009).

Whereas the lawsuit filed under the law violates the law based on Article 1365 BW, generally addressed to doctors who perform medical malpractice. According to Munir Fuady, as quoted by Bambang Heryanto, that malpractice has an understanding that every medical action is carried out by doctors for patients, both in terms of diagnosis, therapy and management of diseases carried out in violation of law, propriety, decency, and professional principles intentional or not intentional or misdirected which causes pain, disability, bodily injury, death and other damage that causes the doctor to be responsible for administrative, civil or criminal responsibility, generally carried out in cases of medical malpractice. Hermien Hadiati Koeswadji quoted the opinion of John D. Blum as saying that medical malpractice is one form of professional negligence that patients can be asked to compensate for in the event of an injury or disability caused directly by the doctor in performing measurable professional actions.<sup>7</sup> In fact, it is not easy to establish the existence of malpractice that there is professional negligence carried out by the doctor at the time of the treatment and there are others who are harmed by the actions of the doctor.

The law does not impose restrictions on illegal acts, which must be interpreted by the court. Initially it was intended that anything that was against the law would be illegal. However, since 1919, a court ruling that has given an understanding that an act or negligence with one of:

- (1) Violates the rights of others
- (2) Contrary to the legal obligations of the perpetrator
- (3) Violating morals is generally adopted from good habits
- (4) Not in accordance with propriety in social life. A doctor can be wrong.

To determine the offender must pay compensation, there must be a close relationship between errors and losses that occur. That in order to be able to claim losses (compensation) due to negligence of the doctor, the patient must be able to prove the following four elements:

- (1) There is an obligation for doctors to service their patients
- (2) Doctors have violated the usual medical service standards
- (3) Plaintiffs (patients) suffer losses that can be requested for compensation from pain, disability, bodily injury, death and other damage
- (4) The fact that pain, disability, bodily injury, death and other damage is caused by sub-standard actions.

To prove the existence of an action below the standard of health services by the patient (plaintiff) is an effort that is not easy because the patient has no knowledge of it. The case involving Dr. Yenny Wiyarni Abbas, Spa who was sued by Ibrahim Blegur for the death of his son named Ananda Falya Rafani Blegur based on illegal acts for medical treatment. By Dr. Yenny Wiyarni Abbas, Spa was appealed with a lawsuit Number 462/Pdt/2016/PT.BDG and

---

<sup>7</sup> Heryanto, B. Malpractice Doctors in Legal Perspectives. (Jurnal Dinamika Hukum, 2010), 10(2), 183-191.

was decided by the Bandung High Court, that Dr. Yenny Wiyarni Abbas, SpA found no errors, because there was no substantial medical evidence.

Based on the description above, legal issues are formulated as follows:

1. What are the elements of liability based on faults in medical disputes?
2. What is the urgency to use the principle of presumption of liability principle to medical disputes?

## Elements Liability based on fault on Medical Dispute

Implicitly Article 66 paragraph (1) of Law No. 29 of 2004 concerning Medical Practice explains that medical disputes are disputes that occur because the interests of patients are harmed by the actions of doctors who carry out these medical practices. Medical disputes in health services provide legal consequences that require the responsibility of the doctor. The legal responsibility of a doctor arises when medical negligence occurs with a doctor. The attitude or action can be interpreted as doing something that is not supposed to be done or not doing something that should be done or not doing something that is a reasonable person based on ordinary considerations that generally regulates human events, will do, or have done something natural and heart careful it just won't do. In fact, in handling patients, there is often a different perspective between patients and doctors with lawsuits or claims to doctors who have committed medical negligence (Nasser, 2011).

The aspect of civil law regarding a patient's claim to a doctor who handles it is almost a matter of compensation claims. Article 1365 BW states that every act that violates the law, which brings harm to another person, requires that the person who caused the wrongdoing to issue the loss compensates for the loss. Unlawful acts in its development have developed into 4 (four) criteria,

first, violating the rights of others; or

second, contrary to the legal obligations of the perpetrator; or

third, violating the rules of moral conduct; or

fourth, which contradicts courtesy, carefulness and caution that a person must have in relation to fellow citizens or with other people's property.

If a patient who feels aggrieved wants to file a lawsuit based on an unlawful act against the doctor, then he must prove that there has been an unlawful act with the criteria mentioned above. In addition, patients also have to prove that there is a causal relationship between violating the law and the loss suffered. A claim that is based on an unlawful act can be directed against the perpetrator of the act itself, because he made a mistake, negligence, was not careful

### Commented [U4]: 2

A good introduction is to explain why the article is of interest to the reader, why the author did the research, and explain the background so that the reader can understand and appreciate the article. Specifically, the Introduction defines the nature and scope of the problem to be studied, relates the research to previous work (usually with a brief review of the literature related to the problem at hand), describes the research objectives, and define any special terms or acronyms that will be used later in the article. Remember that the Introduction provides a clear and logical statement about the hypothesis or the main topic of the article.

which caused harm to others. Claims can also be directed against people responsible for their dependents or their items under their control.

Therefore, the reason for the lawsuit is not appropriate if it is only based on Article 1365 Burgerlijk Wetboek (Indonesian Civil Code), but also based on Article 1366 Burgerlijk Wetboek. This is caused by theory or doctrine, medical malpractice by doctors, consists of three things.<sup>8</sup>

First, Intentional Professional Misconducts, who are found guilty/bad practice if the doctor practices violations of standards and is done intentionally. Doctors practice by ignoring standards and intentional. Practice doctors by ignoring standards in existing rules and there is no element of negligence.

Secondly, Negligence or unintentional negligence, namely a doctor who is due to negligence resulting in a patient's disability or death. A doctor fails to do something that must be done in accordance with medical science. This category of malpractice can be prosecuted, or punished if proven in court.

Third, Lack of Skill, ie doctors take medical action but are incompetent or less competent.

The definition of the element of error referred to in Article 1365 BW based on the concept of civil law about this error can be distinguished between the definition of errors in the broadest sense and understanding errors in the narrow sense. The meaning of error in the broadest sense is to enter intentions and neglect. The meaning of intention is that the action taken is known and desired by the perpetrator. Whereas negligent understanding is an action in which the perpetrator knows the possible consequences that harm others.<sup>9</sup>

Negligence is a form of accidental error, but it is also not something that happens by accident. In this omission, there is no malice from the perpetrator. Negligence in carrying out medical actions causes patient dissatisfaction with doctors in making treatment efforts in accordance with the medical profession. Such negligence causes loss on the part of the patient. Thus, a doctor other than being the subject of civil liability on the basis of default and violating the law can also be prosecuted on the basis of negligence, which results in a loss. The claim on the basis of this negligence is provided in Article 1366 BW, which reads as follows: "A person is responsible, not only for damage caused by his actions but also for those caused by negligence or carelessness."

Law Number 36 of 2009 concerning Health regulates matters relating to the issue of negligence of health personnel in Article 29 and Article 58. Article 29 of Law Number 36 of 2009 stipulates that in the case of health workers suspected of committing negligence in carrying out their profession, Such negligence must be resolved before mediation. Article 58 of Law Number 36 Year 2009 regulates the right of every person to claim compensation to someone, health worker, and/or health service provider who experiences loss due to intentional or negligent health services received. Based on this provision, it appears that prosecution is

<sup>8</sup> Wahyudi, S. Hospital Responsibility for Losses Due to Negligence of Health Workers and Their Implications. (Jurnal Dinamika Hukum, 2011), 11(3), 505-521.

<sup>9</sup> Setiawan, R. Principles of Engagement Law. (Binacipta, 2008).

directed at a person, health worker or health provider (hospital). In the context of violating the law, the hospital can be said to be a "participating (guilty)" party. Unlawful acts committed by two or more people cause there are parties who are referred to as participating (participating) guilty. When there are parties declared guilty, then the determination of liability is based on 1. How much each joint actor must compensate for the loss suffered by the injured party (patient) and 2. Determination of the joint actors dividing the burden of losses among them. Regarding the first thing, each actor is liable for the loss for all losses, with the understanding that if one of them has paid, the other is free from the obligation to pay, while in terms of the two obligations each actor is determined by the weight of each mistake.<sup>10</sup>

Meanwhile, based on Law Number 44 of 2009 concerning Hospitals, compensation claims are only addressed to hospitals, which are caused by negligence of health workers in the hospital. If the losses incurred by intentional health workers at the hospital, compensation claims cannot be made to the hospital. The hospital will not be responsible if the loss is caused by an error in the meaning of an intentional health worker in the hospital.<sup>11</sup> The patient will file a lawsuit to the hospital if the patient knows and feels aggrieved by the actions of the health worker in the hospital. It is not easy for patients to state that the loss is caused by the actions of health workers. It can be unfortunate to happen to patients who occur unexpectedly by health workers. Health workers have made appropriate and appropriate efforts, and permanent losses to patients, this does not include negligence of health workers. Therefore the patient must know the medical record so that the form of action taken by the health worker can be known to him.

The burden of proof when applying Article 1365 BW is given to patients or families of patients so that they will have difficulty in proving an element of error with the doctor. Thus, it is necessary to think about the use of other concepts of responsibility, meaning that they are not based on the element of error.

## The Presumption of Liability Principle in Medical Disputes

The use of Article 1365 BW gives the position of 2 parties, namely the perpetrator and the victim. The system of proof of the concept of liability based on errors incriminates victims as plaintiffs. The new plaintiff will receive compensation if he succeeds in proving the defendant's wrongdoing. In addition, proof of the element of causality between the act and the loss of the victim is borne by the victim as the plaintiff. This is in accordance with the evidentiary load system regulated in BW, namely Article 1865 BW. The proof system as stipulated in Article 1865 BW is also regulated equally in the Civil Procedure Law, namely Article 163 Herzien Inlandsch Reglement (HIR) or Article 283 Rechtreglement voor de Buitengewesten (RBg).

Filing a claim using Article 1365 BW for civil cases or civil disputes faces juridical weaknesses, namely the burden of proof of the element of error and the causal relationship

<sup>10</sup> Nieuwenhuis, J.H. Principles of Engagement Law. (Faculty of Law, Airlangga University, 1985).

<sup>11</sup> Wahyudi, S. Hospital Responsibility for Losses Due to Negligence of Health Workers and Their Implications. (Jurnal Dinamika Hukum, 2011), 11(3), 505-521.

### Commented [U5]: 2

If so, to whom is the responsibility assigned? Generally, the responsibility is delegated to the institution or institutions that oversee them. Explain!

made by the plaintiff. In a civil case, it is very difficult for the victim when he has to explain scientifically or technically the causal relationship between the defendant's actions (which contain elements of error Article 1365 BW or negligence Article 1366 BW) and the loss of the victim.

Basically, legal protection for doctors and patients is placed in an objective and balanced position. If you use the concept of liability based on errors (Article 1365 BW) it will be very difficult for the position of the patient (victim) to be able to prove the doctor's fault when the doctor does malpractice. According to Peter Mahmud Marzuki, liability is a certain form of responsibility. The definition of liability refers to the position of a person or legal entity that is considered to have to pay compensation after a legal event or legal action. For example, a person or other legal entity for committing an illegal act so that it can endanger the person or other legal entity. The term liability lies in the scope of private law.<sup>12</sup> Therefore, in order to face difficulties in proving errors (including proof of negligence based on Article 1366 BW), then the principle of presumption by liability principle is carried out using the principle of presumption. The principle of presumption of liability principle states that the defendant is always liable, until he can prove that he is innocent. Thus, the burden of proof is with the defendant.<sup>13</sup>

The use of the presumption principle is always liable because it is difficult to prove medical errors or medical negligence to the doctor or hospital. The relationship between the doctor and the hospital is based on the implementation of the task. Thus, patients can also be protected by the burden of liability to the hospital based on the principle of vicarious liability/corporate liability. It is fair and reasonable to impose vicarious liability on employers, because employers are more likely to have the means to compensate victims than employees, a claim has been made as a result of activities carried out by employees on behalf of the employer. Employee activity tends to be part of the business activity of the employer, the employer by hiring employees to carry out activities will create illegal acts based on the risks carried out by the employee, the employee will, to a greater or lesser extent, be under the control of the employer.

The difficulty in proving the existence of malpractice requires complex and complex medical knowledge, and difficulties in obtaining the patient's medical records. The use of the principle of presumption of being always liable will not burden doctors and/or hospitals because it is possible to use the principle of reversing the burden of proof. Thus, doctors and/or hospitals can use the principle of reversing the burden of proof if the doctor and/or hospital do not feel guilty or negligent of malpractice, on the grounds that the doctor and/or hospital have done the job correctly.

The European Group on Tort Law (EGTL) publishes the Principles of European Tort Law (PETL). PETL as a starting point for the future discussion about the possibility of harmonization or even the unification of law violating the law (tort law) in Europe. The PETL

---

<sup>12</sup> Marzuki, P.M. Introduction to Legal Studies. (Kencana, 2008).

<sup>13</sup> Shidarta. Indonesian Consumer Protection Law. (Grasindo, 2009).

text about proof load is described in the provisions set out in Part 2 of Chapter 4 PETL which reads as follows:

Article 4: 201 Reversal of the burden of proving fault in general

(1) The burden of proving fault may be reversed in the light of the gravity of the danger presented by the activity.

(2) The gravity of the danger is determined according to the seriousness of possible damage in such cases as well as the likelihood that such damage might actually occur.

Provisions relating to Article 4: 201 PELT are provisions concerning 'evidence' in Article 2: 105 PETL which states: "Damage must be proved according to normal procedural standards. "The damage is too difficult or too costly".<sup>14</sup>

Ivo Giesen states that the reason for including the principle of the burden of reverse proof in PETL is:<sup>15</sup>

First, trying to improve the plaintiff's position due to unreasonable difficulties for the plaintiff because of the technical complexity of the defendant's activities and difficult facts to prove. Furthermore it is said that the reversal of the burden of proof leads to tightening of responsibility and this must be able to be normatively justified.

Second, that the burden of this reverse proof implies that the court was given discretionary power. In this case, the Dutch legal regulations are full of discretionary authority with the principle of fairness and justice mentioned in Article 150 of the Civil Procedure Code (Wetboek van Burgerlijke Rechtsvordering), which allows Dutch courts to use their discretionary powers, but provides little guidance on the application of provisions intended.

If the principle of the burden of reverse proof is used in medical disputes, the obligation to prove the element of medical error or medical negligence is carried out by the doctor and/or hospital as the defendant. The defendant must show proof that he is innocent or innocent. This manifests distributive justice by using the principle of difference and the principle of equal and fair opportunities, and fulfilling the requirements of good and reasonable intention.

Medical disputes are unpleasant events for doctors. Medical disputes are the occurrence of clinical risks in patients, such as adverse clinical events or medical errors. The Indonesian Medical Council has provided guidelines in the form of Medical Practice Guidelines, Doctors and Dentists in Indonesia, which prevent clinical risk by applying the precautionary principle. The principle of prudence includes (1) trying to remain a good doctor (2) trying to always practice good medicine (3) Coupled with implementing special programs, such as: Patient

<sup>14</sup> Giesen, I. The Reversal of the Burden of Proof in the Principles of European Tort Law-A Comparison with Dutch Tort Law and Civil Procedure Rules. (Utrecht L. Rev., 2010), 6, 22.

<sup>15</sup> Giesen, I. The Reversal of the Burden of Proof in the Principles of European Tort Law-A Comparison with Dutch Tort Law and Civil Procedure Rules. (Utrecht L. Rev., 2010), 6, 22.

**Commented [U6]: 2**  
This article repeatedly mentions the burden of reverse, but does not discuss it well.  
Provide a rich and relevant discussion on this subject.

Safety, Quality Assurance, Continuous Medical Education, Development Continuing Professionals, Sustainable Clinical Risk Management, Medical/Clinical Audit, Performance Audit, Learning from one's own mistakes and those of others.

## Conclusion

The use of responsibility based on the principle of error will make it difficult for patients to prove a doctor's or hospital's fault or negligence in the event of malpractice. The use of the presumption principle is always liable for asking for civil liability for doctors and/or hospitals if malpractice occurs will provide legal protection between doctors and or hospitals with patients in proportion and balance.

Doctors and/or hospitals are given the means to prove that they are innocent of malpractice with the principle of the burden of reversed proof. Indeed the use of the principle of the burden of reversing proof will conflict with the principle of presumption of innocence.

However, to protect patients due to unreasonable difficulties for patients due to the technical complexity of doctor's activities and difficult facts to prove, then the courage of judges to use the principle of the burden of reverse proof based on discretion and freedom of judges.

For doctors in conducting medical practice, they must pay attention to the principle of caution by applying guidelines issued by the Indonesian Medical Council.

Conclusions must have wider perspective-implications for other broader areas and domains. Future work and outstanding questions must arise from conclusions. Concluding sections also provide a venue to set the stage for future research directions. Your conclusions must be supportable and not extend beyond your results, so avoid undue speculation and bold judgments about impact. This is also a good place to suggest practical applications for your results, and to outline what the next steps in your research will be.

# From Liability Based on Fault Principle Towards Presumption of Liability Principle in Medical Disputes

## Abstract

The Medical Practice Law provides the right to claim a civil suit to the court. In general, compensation claims are based on civil liability using Article 1365 BW. Article 1365 BW contains liability based on errors and it is not easy to determine when professional errors occur. Article 66 paragraph (3) of the Medical Practice Law stipulates that if there is a malpractice event, there is a possibility that the patient has the right to claim a civil suit to the court. The plaintiff (patient) will get compensation if he succeeds in proving the defendant's (doctor's) mistake, which is difficult for the patient to prove the doctor's fault. To provide objective and balanced legal protection for patients and doctors, the use of the presumption principle is always liable because it is difficult to prove the errors of the doctors.

Keywords: fault principle, medical disputes, liability presumptions.

## Introduction

In the concept of civil law, compensation can be submitted because there is default or because of an unlawful act. Therefore, the form of responsibility in civil law can be classified into two, namely first, contractual responsibilities, and second, responsibility for unlawful actions. The difference between contractual responsibility and the responsibility for illegal actions is whether or not there is an agreement in legal relations. If there is agreement, responsibility is contractual responsibility<sup>1</sup> (Agustina et al., 2012; Hernoko, 2016) Whereas if there is no agreement, there are parties who harm other parties with the principle of illegal acts. Examples of unlawful actions are if a surgeon for negligence has left gauze or tools in the patient's body so that the patient has an infection which results in the patient suffering even because the complications that occur cause the patient to die.<sup>2</sup>

In a contractual legal perspective, it is said that "Contract agreement obligation is the primary means for the parties to create their legal norms that will rule the behavior of their own. Rights and obligations arising from the contract are determined by what is mutually

agreed (exchanged) by the parties through their statements".<sup>3</sup> The relationship between doctors and patients in the implementation of medical practice is known as legal relations. Legal relations in the context of engagement law constitute an agreement that occurs from the agreement. Therefore the legal relationship between doctors and patients occurs from a therapeutic agreement. The agreement known in the field of health services is a therapeutic agreement (transaction). Therapeutic agreements are agreements between doctors and patients, in the form of legal relationships that cause rights and obligations for both parties. Objects in this agreement are therapeutic efforts for patient recovery.<sup>4</sup> In the therapeutic agreement, both doctors and patients have the rights and obligations that must be fulfilled. The rights and obligations of doctors and patients are regulated in Articles 50 to 53 of Law Number 29 of 2004.<sup>5</sup> Thus, if the therapeutic agreement is not met by a doctor, the patient will claim on the legal basis that there is an omission or error.

In agreement legal theory, there are 2 (two) types of agreements, namely: 1. Business engagement, it is an agreement where each party gives maximum effort to reach the intended agreement. In this case, the priority is business, and 2. Engagement of results, it is an agreement based on agreed results, meaning that each party gives the best effort to achieve what has been agreed. In this case, the priority is results.

In such contractual relationships, there may be achievements provided by service providers that cannot be measured but there are also benefits provided by service providers that can be measured (some of which are generated by businesses). In line with Sidharta, which states that the types of services provided in the relationship between professional service providers and users of professional services can be divided into two types of services: promised services to produce something and services that are committed to striving for something.<sup>6</sup> If the two types of agreements above are linked to a therapeutic agreement, then the therapeutic agreement can be categorized in the business agreement, because the doctor will be difficult or impossible to be required to be able to cure his patients. So what is demanded from a doctor is maximum effort and earnest in doing healing based on good medical science standards. Likewise for patients, they are required to try to carry out recommendations and doctor's orders so that the pain can be cured. Both parties, namely doctors and patients are required to try as much as possible to cure an illness. Although the legal relationship between the patient and the doctor is not based on the results but rather on the effort that must be made, it is implied that the effort that must be made is an effort that is in accordance with the applicable standards. Even though the legal relationship between doctors and patients is a maximum effort, it is possible for compensation claims to be based on violating the law that the doctor must account for from the aspect of civil law.

Whereas the lawsuit filed under the law violates the law based on Article 1365 BW, generally addressed to doctors who perform medical malpractice. According to Munir Fuady, as quoted by Bambang Heryanto, that malpractice has an understanding that every medical

action is carried out by doctors for patients, both in terms of diagnosis, therapy and management of diseases carried out in violation of law, propriety, decency, and professional principles intentional or not intentional or misdirected which causes pain, disability, bodily injury, death and other damage that causes the doctor to be responsible for administrative, civil or criminal responsibility, generally carried out in cases of medical malpractice. Hermien Hadiati Koeswadji quoted the opinion of John D. Blum as saying that medical malpractice is one form of professional negligence that patients can be asked to compensate for in the event of an injury or disability caused directly by the doctor in performing measurable professional actions.<sup>7</sup> In fact, it is not easy to establish the existence of malpractice that there is professional negligence carried out by the doctor at the time of the treatment and there are others who are harmed by the actions of the doctor.

The law does not impose restrictions on illegal acts, which must be interpreted by the court. Initially it was intended that anything that was against the law would be illegal. However, since 1919, a court ruling that has given an understanding that an act or negligence with one of:

- (1) Violates the rights of others
- (2) Contrary to the legal obligations of the perpetrator
- (3) Violating morals is generally adopted from good habits
- (4) Not in accordance with propriety in social life. A doctor can be wrong.

To determine the offender must pay compensation, there must be a close relationship between errors and losses that occur. That in order to be able to claim losses (compensation) due to negligence of the doctor, the patient must be able to prove the following four elements:

- (1) There is an obligation for doctors to service their patients
- (2) Doctors have violated the usual medical service standards
- (3) Plaintiffs (patients) suffer losses that can be requested for compensation from pain, disability, bodily injury, death and other damage
- (4) The fact that pain, disability, bodily injury, death and other damage is caused by sub-standard actions.

To prove the existence of an action below the standard of health services by the patient (plaintiff) is an effort that is not easy because the patient has no knowledge of it. The case involving Dr. Yenny Wiyarni Abbas, Spa who was sued by Ibrahim Blegur for the death of his son named Ananda Falya Rafani Blegur based on illegal acts for medical treatment. By Dr. Yenny Wiyarni Abbas, Spa was appealed with a lawsuit Number 462/Pdt/2016/PT.BDG and was decided by the Bandung High Court, that Dr. Yenny Wiyarni Abbas, Spa found no errors, because there was no substantial medical evidence.

Based on the description above, legal issues are formulated as follows:

---

<sup>7</sup> Heryanto, B. Malpractice Doctors in Legal Perspectives. (Jurnal Dinamika Hukum, 2010), 10(2), 183-191.

1. What are the elements of liability based on faults in medical disputes?
2. What is the urgency to use the principle of presumption of liability principle to medical disputes?

## **Elements Liability based on fault on Medical Dispute**

Implicitly Article 66 paragraph (1) of Law No. 29 of 2004 concerning Medical Practice explains that medical disputes are disputes that occur because the interests of patients are harmed by the actions of doctors who carry out these medical practices. Medical disputes in health services provide legal consequences that require the responsibility of the doctor. The legal responsibility of a doctor arises when medical negligence occurs with a doctor. The attitude or action can be interpreted as doing something that is not supposed to be done or not doing something that should be done or not doing something that is a reasonable person based on ordinary considerations that generally regulates human events, will do, or have done something natural and heart careful it just won't do. In fact, in handling patients, there is often a different perspective between patients and doctors with lawsuits or claims to doctors who have committed medical negligence (Nasser, 2011).

The aspect of civil law regarding a patient's claim to a doctor who handles it is almost a matter of compensation claims. Article 1365 BW states that every act that violates the law, which brings harm to another person, requires that the person who caused the wrongdoing to issue the loss compensates for the loss. Unlawful acts in its development have developed into 4 (four) criteria,

first, violating the rights of others; or

second, contrary to the legal obligations of the perpetrator; or

third, violating the rules of moral conduct; or

fourth, which contradicts courtesy, carefulness and caution that a person must have in relation to fellow citizens or with other people's property.

If a patient who feels aggrieved wants to file a lawsuit based on an unlawful act against the doctor, then he must prove that there has been an unlawful act with the criteria mentioned above. In addition, patients also have to prove that there is a causal relationship between violating the law and the loss suffered. A claim that is based on an unlawful act can be directed against the perpetrator of the act itself, because he made a mistake, negligence, was not careful which caused harm to others. Claims can also be directed against people responsible for their dependents or their items under their control.

Therefore, the reason for the lawsuit is not appropriate if it is only based on Article 1365 Burgerlijk Wetboek (Indonesian Civil Code), but also based on Article 1366 Burgerlijk

Wetboek. This is caused by theory or doctrine, medical malpractice by doctors, consists of three things.<sup>8</sup>

First, Intentional Professional Misconducts, who are found guilty/bad practice if the doctor practices violations of standards and is done intentionally. Doctors practice by ignoring standards and intentional. Practice doctors by ignoring standards in existing rules and there is no element of negligence.

Secondly, Negligence or unintentional negligence, namely a doctor who is due to negligence resulting in a patient's disability or death. A doctor fails to do something that must be done in accordance with medical science. This category of malpractice can be prosecuted, or punished if proven in court.

Third, Lack of Skill, ie doctors take medical action but are incompetent or less competent.

The definition of the element of error referred to in Article 1365 BW based on the concept of civil law about this error can be distinguished between the definition of errors in the broadest sense and understanding errors in the narrow sense. The meaning of error in the broadest sense is to enter intentions and neglect. The meaning of intention is that the action taken is known and desired by the perpetrator. Whereas negligent understanding is an action in which the perpetrator knows the possible consequences that harm others.<sup>9</sup>

Negligence is a form of accidental error, but it is also not something that happens by accident. In this omission, there is no malice from the perpetrator. Negligence in carrying out medical actions causes patient dissatisfaction with doctors in making treatment efforts in accordance with the medical profession. Such negligence causes loss on the part of the patient. Thus, a doctor other than being the subject of civil liability on the basis of default and violating the law can also be prosecuted on the basis of negligence, which results in a loss. The claim on the basis of this negligence is provided in Article 1366 BW, which reads as follows: "A person is responsible, not only for damage caused by his actions but also for those caused by negligence or carelessness."

Law Number 36 of 2009 concerning Health regulates matters relating to the issue of negligence of health personnel in Article 29 and Article 58. Article 29 of Law Number 36 of 2009 stipulates that in the case of health workers suspected of committing negligence in carrying out their profession, Such negligence must be resolved before mediation. Article 58 of Law Number 36 Year 2009 regulates the right of every person to claim compensation to someone, health worker, and/or health service provider who experiences loss due to intentional or negligent health services received. Based on this provision, it appears that prosecution is directed at a person, health worker or health provider (hospital). In the context of violating the law, the hospital can be said to be a "participating (guilty)" party. Unlawful acts committed by two or more people cause there are parties who are referred to as participating (participating) guilty. When there are parties declared guilty, then the

---

<sup>8</sup> Wahyudi, S. Hospital Responsibility for Losses Due to Negligence of Health Workers and Their Implications. (Jurnal Dinamika Hukum, 2011), 11(3), 505-521.

<sup>9</sup> Setiawan, R. Principles of Engagement Law. (Binacipta, 2008).

determination of liability is based on 1. How much each joint actor must compensate for the loss suffered by the injured party (patient) and 2. Determination of the joint actors dividing the burden of losses among them. Regarding the first thing, each actor is liable for the loss for all losses, with the understanding that if one of them has paid, the other is free from the obligation to pay, while in terms of the two obligations each actor is determined by the weight of each mistake.<sup>10</sup>

Meanwhile, based on Law Number 44 of 2009 concerning Hospitals, compensation claims are only addressed to hospitals, which are caused by negligence of health workers in the hospital. If the losses incurred by intentional health workers at the hospital, compensation claims cannot be made to the hospital. The hospital will not be responsible if the loss is caused by an error in the meaning of an intentional health worker in the hospital.<sup>11</sup> The patient will file a lawsuit to the hospital if the patient knows and feels aggrieved by the actions of the health worker in the hospital. It is not easy for patients to state that the loss is caused by the actions of health workers. It can be unfortunate to happen to patients who occur unexpectedly by health workers. Health workers have made appropriate and appropriate efforts, and permanent losses to patients, this does not include negligence of health workers. Therefore the patient must know the medical record so that the form of action taken by the health worker can be known to him.

The burden of proof when applying Article 1365 BW is given to patients or families of patients so that they will have difficulty in proving an element of error with the doctor. Thus, it is necessary to think about the use of other concepts of responsibility, meaning that they are not based on the element of error.

## **The Presumption of Liability Principle in Medical Disputes**

The use of Article 1365 BW gives the position of 2 parties, namely the perpetrator and the victim. The system of proof of the concept of liability based on errors incriminates victims as plaintiffs. The new plaintiff will receive compensation if he succeeds in proving the defendant's wrongdoing. In addition, proof of the element of causality between the act and the loss of the victim is borne by the victim as the plaintiff. This is in accordance with the evidentiary load system regulated in BW, namely Article 1865 BW. The proof system as stipulated in Article 1865 BW is also regulated equally in the Civil Procedure Law, namely Article 163 *Herziene Inlandsch Reglement (HIR)* or Article 283 *Rechtreglement voor de Buitengewesten (RBg)*.

Filing a claim using Article 1365 BW for civil cases or civil disputes faces juridical weaknesses, namely the burden of proof of the element of error and the causal relationship made by the plaintiff. In a civil case, it is very difficult for the victim when he has to explain scientifically or technically the causal relationship between the defendant's actions (which

---

<sup>10</sup> Nieuwenhuis, J.H. *Principles of Engagement Law*. (Faculty of Law, Airlangga University, 1985).

<sup>11</sup> Wahyudi, S. *Hospital Responsibility for Losses Due to Negligence of Health Workers and Their Implications*. (*Jurnal Dinamika Hukum*, 2011), 11(3), 505-521.

contain elements of error Article 1365 BW or negligence Article 1366 BW) and the loss of the victim.

Basically, legal protection for doctors and patients is placed in an objective and balanced position. If you use the concept of liability based on errors (Article 1365 BW) it will be very difficult for the position of the patient (victim) to be able to prove the doctor's fault when the doctor does malpractice. According to Peter Mahmud Marzuki, liability is a certain form of responsibility. The definition of liability refers to the position of a person or legal entity that is considered to have to pay compensation after a legal event or legal action. For example, a person or other legal entity for committing an illegal act so that it can endanger the person or other legal entity. The term liability lies in the scope of private law.<sup>12</sup> Therefore, in order to face difficulties in proving errors (including proof of negligence based on Article 1366 BW), then the principle of presumption by liability principle is carried out using the principle of presumption. The principle of presumption of liability principle states that the defendant is always liable, until he can prove that he is innocent. Thus, the burden of proof is with the defendant.<sup>13</sup>

The use of the presumption principle is always liable because it is difficult to prove medical errors or medical negligence to the doctor or hospital. The relationship between the doctor and the hospital is based on the implementation of the task. Thus, patients can also be protected by the burden of liability to the hospital based on the principle of vicarious liability/corporate liability. It is fair and reasonable to impose vicarious liability on employers, because employers are more likely to have the means to compensate victims than employees, a claim has been made as a result of activities carried out by employees on behalf of the employer. Employee activity tends to be part of the business activity of the employer, the employer by hiring employees to carry out activities will create illegal acts based on the risks carried out by the employee, the employee will, to a greater or lesser extent, be under the control of the employer.

The difficulty in proving the existence of malpractice requires complex and complex medical knowledge, and difficulties in obtaining the patient's medical records. The use of the principle of presumption of being always liable will not burden doctors and/or hospitals because it is possible to use the principle of reversing the burden of proof. Thus, doctors and/or hospitals can use the principle of reversing the burden of proof if the doctor and/or hospital do not feel guilty or negligent of malpractice, on the grounds that the doctor and/or hospital have done the job correctly.

The European Group on Tort Law (EGTL) publishes the Principles of European Tort Law (PETL). PETL as a starting point for the future discussion about the possibility of harmonization or even the unification of law violating the law (tort law) in Europe. The PETL text about proof load is described in the provisions set out in Part 2 of Chapter 4 PETL which reads as follows:

Article 4: 201 Reversal of the burden of proving fault in general

---

<sup>12</sup> Marzuki, P.M. Introduction to Legal Studies. (Kencana, 2008).

<sup>13</sup> Shidarta. Indonesian Consumer Protection Law. (Grasindo, 2009).

(1) The burden of proving fault may be reversed in the light of the gravity of the danger presented by the activity.

(2) The gravity of the danger is determined according to the seriousness of possible damage in such cases as well as the likelihood that such damage might actually occur.

Provisions relating to Article 4: 201 PELT are provisions concerning 'evidence' in Article 2: 105 PETL which states: "Damage must be proved according to normal procedural standards. "The damage is too difficult or too costly".<sup>14</sup>

Ivo Giesen states that the reason for including the principle of the burden of reverse proof in PETL is:<sup>15</sup>

First, trying to improve the plaintiff's position due to unreasonable difficulties for the plaintiff because of the technical complexity of the defendant's activities and difficult facts to prove. Furthermore it is said that the reversal of the burden of proof leads to tightening of responsibility and this must be able to be normatively justified.

Second, that the burden of this reverse proof implies that the court was given discretionary power. In this case, the Dutch legal regulations are full of discretionary authority with the principle of fairness and justice mentioned in Article 150 of the Civil Procedure Code (*Wetboek van Burgerlijke Rechtsvordering*), which allows Dutch courts to use their discretionary powers, but provides little guidance on the application of provisions intended.

If the principle of the burden of reverse proof is used in medical disputes, the obligation to prove the element of medical error or medical negligence is carried out by the doctor and/or hospital as the defendant. The defendant must show proof that he is innocent or innocent. This manifests distributive justice by using the principle of difference and the principle of equal and fair opportunities, and fulfilling the requirements of good and reasonable intention.

Medical disputes are unpleasant events for doctors. Medical disputes are the occurrence of clinical risks in patients, such as adverse clinical events or medical errors. The Indonesian Medical Council has provided guidelines in the form of Medical Practice Guidelines, Doctors and Dentists in Indonesia, which prevent clinical risk by applying the precautionary principle. The principle of prudence includes (1) trying to remain a good doctor (2) trying to always practice good medicine (3) Coupled with implementing special programs, such as: Patient Safety, Quality Assurance, Continuous Medical Education, Development Continuing

## **Conclusion**

The use of responsibility based on the principle of error will make it difficult for patients to prove a doctor's or hospital's fault or negligence in the event of malpractice. The use of the presumption principle is always liable for asking for civil liability for doctors and/or hospitals if malpractice occurs will provide legal protection between doctors and or hospitals with patients in proportion and balance.

Doctors and/or hospitals are given the means to prove that they are innocent of malpractice with the principle of the burden of reversed proof. Indeed the use of the principle of the burden of reversing proof will conflict with the principle of presumption of innocence.

However, to protect patients due to unreasonable difficulties for patients due to the technical complexity of doctor's activities and difficult facts to prove, then the courage of judges to use the principle of the burden of reverse proof based on discretion and freedom of judges.

For doctors in conducting medical practice, they must pay attention to the principle of caution by applying guidelines issued by the Indonesian Medical Council.

## Reviewer 1

Dear reviewer,

Thank you for your comments on our articles.

Your valuable comments really help us in improving the quality of the article.

We have completed the revision and answered all your comments as shown below.

We are willing to revise again if it is still needed.

Sincerely yours,

## Abstract

### Comment:

The abstract should summarize the content and conclusions of the paper in 200 – 250 words (Typically around 10 sentences) focusing on what your research is about, what methods have been used, and the results of your research. It should not contain any references or displayed equations. You should be very clear about the purpose and outcome of the research and describe it succinctly in the abstract. Moreover, you should entice your readers by attracting their interest in the research and ensure that you clearly state your key argument or main findings in your abstract.

### Response:

Professional mistakes made by a doctor when doing patient care and causing the patient to become injured or die, then the actions of doctors are said to have committed malpractice.

The Medical Practice Law provides the right to claim a civil suit to the court. In general, compensation claims are based on civil liability using Article 1365 BW. Article 1365 BW contains liability based on errors and it is not easy to determine when professional errors occur. Article 66 paragraph (3) of the Medical Practice Law stipulates that if there is a malpractice event, there is a possibility that the patient has the right to claim a civil suit to the court. The plaintiff (patient) will get compensation if he succeeds in proving the defendant's (doctor's) mistake, which is difficult for the patient to prove the doctor's fault. To provide objective and balanced legal protection for patients and doctors, the use of the presumption principle is always liable because it is difficult to prove the errors of the doctors. The use of the principle of presumption of being always liable will not burden the doctor because it is possible to use the principle of reverse proof. Doctors can use the principle of reversed evidence if the doctor is not guilty of malpractice by arguing that the doctor has done a good and proper job working professionally, and using the priority principle.

## Introduction

**Comment:**

The introduction should lay the ground-work for why the article is worth reading, and describe where the work fits within the existing literature. Introduce the novel elements of the paper in the introduction, thus providing motivation for the reader to penetrate the main text.

**Response:**

Health care is a basic national interest, because it deals with the realization of people's welfare. Health care needs are getting better along with the progress of a nation. Referring to Article 7 of the Health Law expressly states that the government must implement equitable and affordable health efforts, and be responsible for increasing the level of public health. The meaning of Article 27 paragraph 2 of the 1945 Constitution, namely "everyone has the right to have a decent job and life or human being" implies the need for a decent life in obtaining health services. As a national interest, especially related to achieving public welfare, it is imperative that the function of law has an important role in protecting national interests and in creating public welfare (Indar, 2013). In order to realize legal functions as "social integration", it is expected that the provision of health services can be guaranteed by the patient's interests and without harming the interests of other parties. The doctor's profession is a noble profession, so doctors serve by prioritizing the interests of others and society. Therefore, the noble profession is only entrusted to people who are polite, respectable, and have a paternalistic spirit (Trisnadi, 2017). Conboy et.al. (2010), and in He and Jiwei Qian (2016), stated that "the doctor-patient relationship is central to the practice of medicine and vital for the delivery of health services. Many studies have found that healthy interactions between physicians and patients can greatly enhance the quality of care and patients' well-being". Kaba and Sooriakumaran (2007), cited in He and Jiwei Qian (2016), stated that "with the remarkable transformation of the doctor-a patient relationship from benevolent paternalism to one characterized by contractual consumerism, recent decades have witnessed a surge of medical disputes worldwide". The relationship between law and medicine is not all negative, but the law has contributed significantly to patient rights and medical practice (Rabinovich-Ein, 2011). After a doctor has a license to practice, there is a legal relationship for the implementation of medical practices that each party (patient and doctor) has autonomy (freedom, rights and obligations) in having two ways of communication and interaction. The law provides protection for both parties through a legal instrument called informed consent. According to the Minister of Health Regulation Number 290/MENKES/PER/III/2008 that medical approval is an agreement given by a patient or close family after getting a full explanation of the action of medicine or dentistry to be performed on the patient. Informed consent (or medical approval) is an agreement given by the patient or their family based on an explanation of the medical action to be performed on the patient. The object in legal relations is health services to patients (Iswandari, 2006). In contrast to the legal relationship

in general, the legal relationship between patients and doctors (and dentists) is a maximum effort for the recovery of patients who are carried out carefully (meeting with a doctor), so that the legal relationship is called a business or raises business engagement.

## Reviewer 1

Dear reviewer,

Thank you for your comments on our articles.

Your valuable comments really help us in improving the quality of the article.

We have completed the revision and answered all your comments as shown below.

We are willing to revise again if it is still needed.

Sincerely yours,

## Abstract

### Comment:

The abstract should summarize the content and conclusions of the paper in 200 – 250 words (Typically around 10 sentences) focusing on what your research is about, what methods have been used, and the results of your research. It should not contain any references or displayed equations. You should be very clear about the purpose and outcome of the research and describe it succinctly in the abstract. Moreover, you should entice your readers by attracting their interest in the research and ensure that you clearly state your key argument or main findings in your abstract.

### Response:

Professional mistakes made by a doctor when doing patient care and causing the patient to become injured or die, then the actions of doctors are said to have committed malpractice.

The Medical Practice Law provides the right to claim a civil suit to the court. In general, compensation claims are based on civil liability using Article 1365 BW. Article 1365 BW contains liability based on errors and it is not easy to determine when professional errors occur. Article 66 paragraph (3) of the Medical Practice Law stipulates that if there is a malpractice event, there is a possibility that the patient has the right to claim a civil suit to the court. The plaintiff (patient) will get compensation if he succeeds in proving the defendant's (doctor's) mistake, which is difficult for the patient to prove the doctor's fault. To provide objective and balanced legal protection for patients and doctors, the use of the presumption principle is always liable because it is difficult to prove the errors of the doctors. The use of the principle of presumption of being always liable will not burden the doctor because it is possible to use the principle of reverse proof. Doctors can use the principle of reversed evidence if the doctor is not guilty of malpractice by arguing that the doctor has done a good and proper job working professionally, and using the priority principle.

## Introduction

**Comment:**

A good introduction is to explain why the article is of interest to the reader, why the author did the research, and explain the background so that the reader can understand and appreciate the article. Specifically, the Introduction defines the nature and scope of the problem to be studied, relates the research to previous work (usually with a brief review of the literature related to the problem at hand), describes the research objectives, and define any special terms or acronyms that will be used later in the article. Remember that the Introduction provides a clear and logical statement about the hypothesis or the main topic of the article.

**Response:**

Health care is a basic national interest, because it deals with the realization of people's welfare. Health care needs are getting better along with the progress of a nation. Referring to Article 7 of the Health Law expressly states that the government must implement equitable and affordable health efforts, and be responsible for increasing the level of public health. The meaning of Article 27 paragraph 2 of the 1945 Constitution, namely "everyone has the right to have a decent job and life or human being" implies the need for a decent life in obtaining health services. As a national interest, especially related to achieving public welfare, it is imperative that the function of law has an important role in protecting national interests and in creating public welfare (Indar, 2013). In order to realize legal functions as "social integration", it is expected that the provision of health services can be guaranteed by the patient's interests and without harming the interests of other parties. The doctor's profession is a noble profession, so doctors serve by prioritizing the interests of others and society. Therefore, the noble profession is only entrusted to people who are polite, respectable, and have a paternalistic spirit (Trisnadi, 2017). Conboy et.al. (2010), and in He and Jiwei Qian (2016), stated that "the doctor-patient relationship is central to the practice of medicine and vital for the delivery of health services. Many studies have found that healthy interactions between physicians and patients can greatly enhance the quality of care and patients' well-being". Kaba and Sooriakumaran (2007), cited in He and Jiwei Qian (2016), stated that "with the remarkable transformation of the doctor-patient relationship from benevolent paternalism to one characterized by contractual consumerism, recent decades have witnessed a surge of medical disputes worldwide". The relationship between law and medicine is not all negative, but the law has contributed significantly to patient rights and medical practice (Rabinovich-Ein, 2011). After a doctor has a license to practice, there is a legal relationship for the implementation of medical practices that each party (patient and doctor) has autonomy (freedom, rights and obligations) in having two ways of communication and interaction. The law provides protection for both parties through a legal instrument called informed consent. According to the Minister of Health Regulation Number 290/MENKES/PER/III/2008 that medical approval is an agreement given by a patient or close family after getting a full explanation of the action of medicine or dentistry to be performed on the patient. Informed consent (or medical approval) is an agreement given by the patient or their family based on

an explanation of the medical action to be performed on the patient. The object in legal relations is health services to patients (Iswandari, 2006). In contrast to the legal relationship in general, the legal relationship between patients and doctors (and dentists) is a maximum effort for the recovery of patients who are carried out carefully (meeting with a doctor), so that the legal relationship is called a business or raises business engagement.

## Elements Liability based on fault on Medical Dispute

### Comment:

If so, to whom is the responsibility assigned?

Generally, the responsibility is delegated to the institution or institutions that oversee them. Explain!

### Response:

Health workers have made appropriate and appropriate efforts, and permanent losses to patients, this does not include negligence of health workers. Therefore the patient must know the medical record so that the form of action taken by the health worker can be known to him.

The liability charged to the hospital for the mistakes of doctors who work in hospitals is known as the principle of vicarious liability/corporate liability. The principle of vicarious liability means that the employer is liable for the loss of another party caused by the people/employees who are under his supervision. Meanwhile, the principle of corporate liability is defined as a corporation that houses a group of workers who have responsibility for the workers employed. In determining the existence of vicarious liability/corporate liability according to Paula Giliker it is needed "a relationship by which one may be liable for the harmful acts of others; the commission of wrongdoing by the employee or subordinate; and that liability is confined to a specific set of circumstances, be it within the course of employment" (Giliker, 2011).

## The Presumption of Liability Principle in Medical Disputes

### Comment:

This article repeatedly mentions the burden of reverse, but does not discuss it well. Provide a rich and relevant discussion on this subject.

### Response:

Ivo Giesen (2010) acknowledged that the Dutch Supreme Court was not possible to use discretion to use the principle of the burden of reversed proof, so the hope was that legislators would amend their legal regulations. Reluctance not to use the principle of burden of reverse proof is easy to understand, because the rationale for proof reversal theory is that someone is considered guilty, until the person concerned can prove otherwise. This is certainly considered to be contrary to the presumption of innocence principle. However, the principle of reverse proof that will be used by doctors and/or hospitals in medical disputes is very relevant. This is to provide legal protection between doctors and patients proportionally and balanced. Proportional and balanced legal protection creates a distribution based on the

principle of proportionality. According to Hans Kelsen, if the actions of an individual have caused a harmful effect on someone else, basically he can be free from civil sanctions by proving that he does not expect or does not want the harmful consequences of his actions and has fulfilled the legal obligation to take action under normal circumstances, it can avoid these harmful consequences (Kelsen, 1961). Proportional and balanced legal protection creates distributive justice. John Rawls tries to formulate two principles of distributive justice, as follows: First, the principle of greatest equality, that everyone must have equal rights to basic freedom to the greatest extent, the same width of freedom for all. This is the most basic (human rights) that everyone must have. In other words, only with the guarantee of the same freedom for all people will justice be realized (the principle of rights). The principle of greatest equality, is none other than the principle of equality of rights, is the principle that gives equality of rights and is of course inversely proportional to the burden of obligations that each person has (Taufik, 2013). This is according to what John Rawls (1961) stated that "First, each person is to have the same right to the most extensive compatible with a similar liberty for others. This is as stated by John Rawls that "First: each person has equal right to the most extensive liberty compatible with a similar liberty for others". Second, social inequality, the economy must be arranged in such a way. By John Rawls (1961) it is said that "Second: social and economic inequalities are to be arranged so that they are both (a), which is expected to be everyone's advantage, and (b) attached to positions and offices open to all". Thus the following two principles need to be considered, namely the principle of difference and the principle of equal and fair opportunities. Both are expected to provide the greatest benefits for the less fortunate. The principle of equal and equitable difference and principle of opportunity is the principle of objective difference, meaning that the second principle ensures the realization of proportionality of the exchange of rights and obligations of the parties, so that (objective) differences of exchange can be accepted as long as they meet the requirements of good and fair faith. Thus, the first principle and the second principle cannot be separated from the others. In accordance with the principle of proportionality, Rawls justice will be realized if both conditions are applied comprehensively. Medical disputes require respect for patient autonomy and treat patients as equal partners in managing patient health. Provide opportunities for disputing individuals to present their narratives in a non-confrontational environment (Kumaralingam, 2017). Barnes (2010) stated that "facility liability for failure to take relatively inexpensive recommended precautions is warranted".

## Conclusion

### Comment:

Conclusions must have wider perspective-implications for other broader areas and domains. Future work and outstanding questions must arise from conclusions. Concluding sections also provide a venue to set the stage for future research directions. Your conclusions must be supportable and not extend beyond your results, so avoid undue speculation and bold judgments about impact. This is also a good place to suggest practical applications for your results, and to outline what the next steps in your research will be.

### Response:

The use of responsibility based on the principle of error will make it difficult for patients to prove a doctor's or hospital's fault or negligence in the event of malpractice. The use of the presumption principle is always liable for asking for civil liability for doctors and/or hospitals if malpractice occurs will provide legal protection between doctors and or hospitals with patients in proportion and balance. Doctors and/or hospitals are given the means to prove that they are innocent of malpractice with the principle of the burden of reversed proof. Indeed the use of the principle of the burden of reversing proof will conflict with the principle of presumption of innocence. However, to protect patients due to unreasonable difficulties for patients due to the technical complexity of doctor's activities and difficult facts to prove, then the courage of judges to use the principle of the burden of reverse proof based on discretion and freedom of judges. For doctors in conducting medical practice, they must pay attention to the principle of caution by applying guidelines issued by the Indonesian Medical Council.

# From Liability Based on Fault Principle Towards Presumption of Liability Principle in Medical Disputes

## Abstract

Professional mistakes made by a doctor when doing patient care and causing the patient to become injured or die, then the actions of doctors are said to have committed malpractice. The Medical Practice Law provides the right to claim a civil suit to the court. In general, compensation claims are based on civil liability using Article 1365 BW. Article 1365 BW contains liability based on errors and it is not easy to determine when professional errors occur. Article 66 paragraph (3) of the Medical Practice Law stipulates that if there is a malpractice event, there is a possibility that the patient has the right to claim a civil suit to the court. The plaintiff (patient) will get compensation if he succeeds in proving the defendant's (doctor's) mistake, which is difficult for the patient to prove the doctor's fault. To provide objective and balanced legal protection for patients and doctors, the use of the presumption principle is always liable because it is difficult to prove the errors of the doctors. The use of the principle of presumption of being always liable will not burden the doctor because it is possible to use the principle of reverse proof. Doctors can use the principle of reversed evidence if the doctor is not guilty of malpractice by arguing that the doctor has done a good and proper job working professionally, and using the priority principle.

Keywords: fault principle, medical disputes, liability presumptions.

## Introduction

Health care is a basic national interest, because it deals with the realization of people's welfare. Health care needs are getting better along with the progress of a nation. Referring to Article 7 of the Health Law expressly states that the government must implement equitable and affordable health efforts, and be responsible for increasing the level of public health. The meaning of Article 27 paragraph 2 of the 1945 Constitution, namely "everyone has the right to have a decent job and life or human being" implies the need for a decent life in obtaining health services. As a national interest, especially related to achieving public welfare, it is imperative that the function of law has an important role in protecting national interests and in creating public welfare (Indar, 2013). In order to realize legal functions as "social integration", it is expected that the provision of health services can be guaranteed by the patient's interests and without harming the interests of other parties. The doctor's profession is a noble profession, so doctors serve by prioritizing the interests of others and society.

Therefore, the noble profession is only entrusted to people who are polite, respectable, and have a paternalistic spirit (Trisnadi, 2017). Conboy et.al. (2010), and in He and Jiwei Qian (2016), stated that “the doctor-patient relationship is central to the practice of medicine and vital for the delivery of health services. Many studies have found that healthy interactions between physicians and patients can greatly enhance the quality of care and patients’ well-being”. Kaba and Sooriakumaran (2007), cited in He and Jiwei Qian (2016), stated that “with the remarkable transformation of the doctor–a patient relationship from benevolent paternalism to one characterized by contractual consumerism, recent decades have witnessed a surge of medical disputes worldwide”. The relationship between law and medicine is not all negative, but the law has contributed significantly to patient rights and medical practice (Rabinovich-Ein, 2011). After a doctor has a license to practice, there is a legal relationship for the implementation of medical practices that each party (patient and doctor) has autonomy (freedom, rights and obligations) in having two ways of communication and interaction. The law provides protection for both parties through a legal instrument called informed consent. According to the Minister of Health Regulation Number 290/MENKES/PER/III/2008 that medical approval is an agreement given by a patient or close family after getting a full explanation of the action of medicine or dentistry to be performed on the patient. Informed consent (or medical approval) is an agreement given by the patient or their family based on an explanation of the medical action to be performed on the patient. The object in legal relations is health services to patients (Iswandari, 2006). In contrast to the legal relationship in general, the legal relationship between patients and doctors (and dentists) is a maximum effort for the recovery of patients who are carried out carefully (meeting with a doctor), so that the legal relationship is called a business or raises business engagement.

In the concept of civil law, compensation can be submitted because there is default or because of an unlawful act. Therefore, the form of responsibility in civil law can be classified into two, namely first, contractual responsibilities, and second, responsibility for unlawful actions. The difference between contractual responsibility and the responsibility for illegal actions is whether or not there is an agreement in legal relations. If there is agreement, responsibility is contractual responsibility (Agustina et al., 2012; Hernoko, 2016). Whereas if there is no agreement, there are parties who harm other parties with the principle of illegal acts. Examples of unlawful actions are if a surgeon for negligence has left gauze or tools in the patient's body so that the patient has an infection which results in the patient suffering even because the complications that occur cause the patient to die (Astuti, 2017).

In a contractual legal perspective, it is said that “Contract agreement obligation is the primary means for the parties to create their legal norms that will rule the behavior of their own. Rights and obligations arising from the contract are determined by what is mutually agreed (exchanged) by the parties through their statements” (Hernoko et al., 2017). The relationship between doctors and patients in the implementation of medical practice is known as legal relations. Legal relations in the context of engagement law constitute an agreement that occurs from the agreement. Therefore the legal relationship between doctors and patients occurs from a therapeutic agreement. The agreement known in the field of health services is a therapeutic agreement (transaction). Therapeutic agreements are agreements between doctors and patients, in the form of legal relationships that cause rights and obligations for both

parties. Objects in this agreement are therapeutic efforts for patient recovery (Nasution, 2005). In the therapeutic agreement, both doctors and patients have the rights and obligations that must be fulfilled. The rights and obligations of doctors and patients are regulated in Articles 50 to 53 of Law Number 29 of 2004 (Nuryanto, 2012). Thus, if the therapeutic agreement is not met by a doctor, the patient will claim on the legal basis that there is an omission or error.

In agreement legal theory, there are 2 (two) types of agreements, namely: 1. Business engagement, it is an agreement where each party gives maximum effort to reach the intended agreement. In this case, the priority is business, and 2. Engagement of results, it is an agreement based on agreed results, meaning that each party gives the best effort to achieve what has been agreed. In this case, the priority is results.

In such contractual relationships, there may be achievements provided by service providers that cannot be measured but there are also benefits provided by service providers that can be measured (some of which are generated by businesses). In line with Sidharta, which states that the types of services provided in the relationship between professional service providers and users of professional services can be divided into two types of services: promised services to produce something and services that are committed to striving for something (Shidarta, 2009). If the two types of agreements above are linked to a therapeutic agreement, then the therapeutic agreement can be categorized in the business agreement, because the doctor will be difficult or impossible to be required to be able to cure his patients. So what is demanded from a doctor is maximum effort and earnest in doing healing based on good medical science standards. Likewise for patients, they are required to try to carry out recommendations and doctor's orders so that the pain can be cured. Both parties, namely doctors and patients are required to try as much as possible to cure an illness. Although the legal relationship between the patient and the doctor is not based on the results but rather on the effort that must be made, it is implied that the effort that must be made is an effort that is in accordance with the applicable standards. Even though the legal relationship between doctors and patients is a maximum effort, it is possible for compensation claims to be based on violating the law that the doctor must account for from the aspect of civil law.

Whereas the lawsuit filed under the law violates the law based on Article 1365 BW, generally addressed to doctors who perform medical malpractice. According to Munir Fuady, as quoted by Bambang Heryanto, that malpractice has an understanding that every medical action is carried out by doctors for patients, both in terms of diagnosis, therapy and management of diseases carried out in violation of law, propriety, decency, and professional principles intentional or not intentional or misdirected which causes pain, disability, bodily injury, death and other damage that causes the doctor to be responsible for administrative, civil or criminal responsibility, generally carried out in cases of medical malpractice. Hermien Hadiati Koeswadji quoted the opinion of John D. Blum as saying that medical malpractice is one form of professional negligence that patients can be asked to compensate for in the event of an injury or disability caused directly by the doctor in performing measurable professional actions (Heryanto, 2010). In fact, it is not easy to establish the

existence of malpractice that there is professional negligence carried out by the doctor at the time of the treatment and there are others who are harmed by the actions of the doctor.

The law does not impose restrictions on illegal acts, which must be interpreted by the court. Initially it was intended that anything that was against the law would be illegal. However, since 1919, a court ruling that has given an understanding that an act or negligence with one of: (1) Violates the rights of others (2) Contrary to the legal obligations of the perpetrator (3) Violating morals is generally adopted from good habits (4) Not in accordance with propriety in social life. A doctor can be wrong.

To determine the offender must pay compensation, there must be a close relationship between errors and losses that occur. That in order to be able to claim losses (compensation) due to negligence of the doctor, the patient must be able to prove the following four elements: (1) There is an obligation for doctors to service their patients (2) Doctors have violated the usual medical service standards (3) Plaintiffs (patients) suffer losses that can be requested for compensation from pain, disability, bodily injury, death and other damage (4) The fact that pain, disability, bodily injury, death and other damage is caused by sub-standard actions.

To prove the existence of an action below the standard of health services by the patient (plaintiff) is an effort that is not easy because the patient has no knowledge of it. The case involving Dr. Yenny Wiyarni Abbas, Spa who was sued by Ibrahim Blegur for the death of his son named Ananda Falya Rafani Blegur based on illegal acts for medical treatment. By Dr. Yenny Wiyarni Abbas, Spa was appealed with a lawsuit Number 462/Pdt/2016/PT.BDG and was decided by the Bandung High Court, that Dr. Yenny Wiyarni Abbas, Spa found no errors, because there was no substantial medical evidence.

Based on the description above, legal issues are formulated as follows:

1. What are the elements of liability based on faults in medical disputes?
2. What is the urgency to use the principle of presumption of liability principle to medical disputes?

## **Elements Liability based on fault on Medical Dispute**

Implicitly Article 66 paragraph (1) of Law No. 29 of 2004 concerning Medical Practice explains that medical disputes are disputes that occur because the interests of patients are harmed by the actions of doctors who carry out these medical practices. Medical disputes in health services provide legal consequences that require the responsibility of the doctor. The legal responsibility of a doctor arises when medical negligence occurs with a doctor. The attitude or action can be interpreted as doing something that is not supposed to be done or not doing something that should be done or not doing something that is a reasonable person based on ordinary considerations that generally regulates human events, will do, or have done something natural and heart careful it just won't do. In fact, in handling patients, there is often

a different perspective between patients and doctors with lawsuits or claims to doctors who have committed medical negligence (Nasser, 2011).

The aspect of civil law regarding a patient's claim to a doctor who handles it is almost a matter of compensation claims. Article 1365 BW states that every act that violates the law, which brings harm to another person, requires that the person who caused the wrongdoing to issue the loss compensates for the loss. Unlawful acts in its development have developed into 4 (four) criteria, first, violating the rights of others; or second, contrary to the legal obligations of the perpetrator; or third, violating the rules of moral conduct; or fourth, which contradicts courtesy, carefulness and caution that a person must have in relation to fellow citizens or with other people's property.

If a patient who feels aggrieved wants to file a lawsuit based on an unlawful act against the doctor, then he must prove that there has been an unlawful act with the criteria mentioned above. In addition, patients also have to prove that there is a causal relationship between violating the law and the loss suffered. A claim that is based on an unlawful act can be directed against the perpetrator of the act itself, because he made a mistake, negligence, was not careful which caused harm to others. Claims can also be directed against people responsible for their dependents or their items under their control.

Therefore, the reason for the lawsuit is not appropriate if it is only based on Article 1365 Burgerlijk Wetboek (Indonesian Civil Code), but also based on Article 1366 Burgerlijk Wetboek. This is caused by theory or doctrine, medical malpractice by doctors, consists of three things (Wahyudi, 2011). First, Intentional Professional Misconducts, who are found guilty/bad practice if the doctor practices violations of standards and is done intentionally. Doctors practice by ignoring standards and intentional. Practice doctors by ignoring standards in existing rules and there is no element of negligence. Secondly, Negligence or unintentional negligence, namely a doctor who is due to negligence resulting in a patient's disability or death. A doctor fails to do something that must be done in accordance with medical science. This category of malpractice can be prosecuted, or punished if proven in court. Third, Lack of Skill, ie doctors take medical action but are incompetent or less competent.

The definition of the element of error referred to in Article 1365 BW based on the concept of civil law about this error can be distinguished between the definition of errors in the broadest sense and understanding errors in the narrow sense. The meaning of error in the broadest sense is to enter intentions and neglect. The meaning of intention is that the action taken is known and desired by the perpetrator. Whereas negligent understanding is an action in which the perpetrator knows the possible consequences that harm others (Setiawan, 2008).

Negligence is a form of accidental error, but it is also not something that happens by accident. In this omission, there is no malice from the perpetrator. Negligence in carrying out medical actions causes patient dissatisfaction with doctors in making treatment efforts in accordance with the medical profession. Such negligence causes loss on the part of the patient. Thus, a doctor other than being the subject of civil liability on the basis of default and violating the law can also be prosecuted on the basis of negligence, which results in a loss. The claim on the basis of this negligence is provided in Article 1366 BW, which reads as

follows: "A person is responsible, not only for damage caused by his actions but also for those caused by negligence or carelessness."

Law Number 36 of 2009 concerning Health regulates matters relating to the issue of negligence of health personnel in Article 29 and Article 58. Article 29 of Law Number 36 of 2009 stipulates that in the case of health workers suspected of committing negligence in carrying out their profession, Such negligence must be resolved before mediation. Article 58 of Law Number 36 Year 2009 regulates the right of every person to claim compensation to someone, health worker, and/or health service provider who experiences loss due to intentional or negligent health services received. Based on this provision, it appears that prosecution is directed at a person, health worker or health provider (hospital). In the context of violating the law, the hospital can be said to be a "participating (guilty)" party. Unlawful acts committed by two or more people cause there are parties who are referred to as participating (participating) guilty. When there are parties declared guilty, then the determination of liability is based on 1. How much each joint actor must compensate for the loss suffered by the injured party (patient) and 2. Determination of the joint actors dividing the burden of losses among them. Regarding the first thing, each actor is liable for the loss for all losses, with the understanding that if one of them has paid, the other is free from the obligation to pay, while in terms of the two obligations each actor is determined by the weight of each mistake (Nieuwenhuis, 1985).

Meanwhile, based on Law Number 44 of 2009 concerning Hospitals, compensation claims are only addressed to hospitals, which are caused by negligence of health workers in the hospital. If the losses incurred by intentional health workers at the hospital, compensation claims cannot be made to the hospital. The hospital will not be responsible if the loss is caused by an error in the meaning of an intentional health worker in the hospital (Wahyudi, 2011). The patient will file a lawsuit to the hospital if the patient knows and feels aggrieved by the actions of the health worker in the hospital. It is not easy for patients to state that the loss is caused by the actions of health workers. It can be unfortunate to happen to patients who occur unexpectedly by health workers. Health workers have made appropriate and appropriate efforts, and permanent losses to patients, this does not include negligence of health workers. Therefore the patient must know the medical record so that the form of action taken by the health worker can be known to him. The liability charged to the hospital for the mistakes of doctors who work in hospitals is known as the principle of vicarious liability/corporate liability. The principle of vicarious liability means that the employer is liable for the loss of another party caused by the people/employees who are under his supervision. Meanwhile, the principle of corporate liability is defined as a corporation that houses a group of workers who have responsibility for the workers employed. In determining the existence of vicarious liability/corporate liability according to Paula Giliker it is needed "a relationship by which one may be liable for the harmful acts of others; the commission of wrongdoing by the employee or subordinate; and that liability is confined to a specific set of circumstances, be it within the course of employment" (Giliker, 2011).

The burden of proof when applying Article 1365 BW is given to patients or families of patients so that they will have difficulty in proving an element of error with the doctor. Thus,

it is necessary to think about the use of other concepts of responsibility, meaning that they are not based on the element of error.

## **The Presumption of Liability Principle in Medical Disputes**

The use of Article 1365 BW gives the position of 2 parties, namely the perpetrator and the victim. The system of proof of the concept of liability based on errors incriminates victims as plaintiffs. The new plaintiff will receive compensation if he succeeds in proving the defendant's wrongdoing. In addition, proof of the element of causality between the act and the loss of the victim is borne by the victim as the plaintiff. This is in accordance with the evidentiary load system regulated in BW, namely Article 1865 BW. The proof system as stipulated in Article 1865 BW is also regulated equally in the Civil Procedure Law, namely Article 163 Herzien Inlandsch Reglement (HIR) or Article 283 Rechtreglement voor de Buitengewesten (RBg).

Filing a claim using Article 1365 BW for civil cases or civil disputes faces juridical weaknesses, namely the burden of proof of the element of error and the causal relationship made by the plaintiff. In a civil case, it is very difficult for the victim when he has to explain scientifically or technically the causal relationship between the defendant's actions (which contain elements of error Article 1365 BW or negligence Article 1366 BW) and the loss of the victim.

Basically, legal protection for doctors and patients is placed in an objective and balanced position. If you use the concept of liability based on errors (Article 1365 BW) it will be very difficult for the position of the patient (victim) to be able to prove the doctor's fault when the doctor does malpractice. According to Peter Mahmud Marzuki, liability is a certain form of responsibility. The definition of liability refers to the position of a person or legal entity that is considered to have to pay compensation after a legal event or legal action. For example, a person or other legal entity for committing an illegal act so that it can endanger the person or other legal entity. The term liability lies in the scope of private law (Marzuki, 2008). Therefore, in order to face difficulties in proving errors (including proof of negligence based on Article 1366 BW), then the principle of presumption by liability principle is carried out using the principle of presumption. The principle of presumption of liability principle states that the defendant is always liable, until he can prove that he is innocent. Thus, the burden of proof is with the defendant (Sidharta, 2009).

The use of the presumption principle is always liable because it is difficult to prove medical errors or medical negligence to the doctor or hospital. The relationship between the doctor and the hospital is based on the implementation of the task. Thus, patients can also be protected by the burden of liability to the hospital based on the principle of vicarious liability/corporate liability. It is fair and reasonable to impose vicarious liability on employers, because employers are more likely to have the means to compensate victims than employees, a claim has been made as a result of activities carried out by employees on behalf of the employer. Employee activity tends to be part of the business activity of the employer,

the employer by hiring employees to carry out activities will create illegal acts based on the risks carried out by the employee, the employee will, to a greater or lesser extent, be under the control of the employer.

The difficulty in proving the existence of malpractice requires complex and complex medical knowledge, and difficulties in obtaining the patient's medical records. The use of the principle of presumption of being always liable will not burden doctors and/or hospitals because it is possible to use the principle of reversing the burden of proof. Thus, doctors and/or hospitals can use the principle of reversing the burden of proof if the doctor and/or hospital do not feel guilty or negligent of malpractice, on the grounds that the doctor and/or hospital have done the job correctly.

The European Group on Tort Law (EGTL) publishes the Principles of European Tort Law (PETL). PETL as a starting point for the future discussion about the possibility of harmonization or even the unification of law violating the law (tort law) in Europe. The PETL text about proof load is described in the provisions set out in Part 2 of Chapter 4 PETL which reads as follows:

Article 4: 201 Reversal of the burden of proving fault in general

(1) The burden of proving fault may be reversed in the light of the gravity of the danger presented by the activity.

(2) The gravity of the danger is determined according to the seriousness of possible damage in such cases as well as the likelihood that such damage might actually occur.

Provisions relating to Article 4: 201 PELT are provisions concerning 'evidence' in Article 2: 105 PETL which states: "Damage must be proved according to normal procedural standards. "The damage is too difficult or too costly" (Giesen, 2010).

Ivo Giesen (2010) states that the reason for including the principle of the burden of reverse proof in PETL is First, trying to improve the plaintiff's position due to unreasonable difficulties for the plaintiff because of the technical complexity of the defendant's activities and difficult facts to prove. Furthermore it is said that the reversal of the burden of proof leads to tightening of responsibility and this must be able to be normatively justified. Second, that the burden of this reverse proof implies that the court was given discretionary power. In this case, the Dutch legal regulations are full of discretionary authority with the principle of fairness and justice mentioned in Article 150 of the Civil Procedure Code (Wetboek van Burgerlijke Rechtsvordering), which allows Dutch courts to use their discretionary powers, but provides little guidance on the application of provisions intended.

Ivo Giesen (2010) acknowledged that the Dutch Supreme Court was not possible to use discretion to use the principle of the burden of reversed proof, so the hope was that legislators would amend their legal regulations. Reluctance not to use the principle of burden of reverse

proof is easy to understand, because the rationale for proof reversal theory is that someone is considered guilty, until the person concerned can prove otherwise. This is certainly considered to be contrary to the presumption of innocence principle. However, the principle of reverse proof that will be used by doctors and/or hospitals in medical disputes is very relevant. This is to provide legal protection between doctors and patients proportionally and balanced. Proportional and balanced legal protection creates a distribution based on the principle of proportionality. According to Hans Kelsen, if the actions of an individual have caused a harmful effect on someone else, basically he can be free from civil sanctions by proving that he does not expect or does not want the harmful consequences of his actions and has fulfilled the legal obligation to take action under normal circumstances, it can avoid these harmful consequences (Kelsen, 1961). Proportional and balanced legal protection creates distributive justice. John Rawls tries to formulate two principles of distributive justice, as follows: First, the principle of greatest equality, that everyone must have equal rights to basic freedom to the greatest extent, the same width of freedom for all. This is the most basic (human rights) that everyone must have. In other words, only with the guarantee of the same freedom for all people will justice be realized (the principle of rights). The principle of greatest equality, is none other than the principle of equality of rights, is the principle that gives equality of rights and is of course inversely proportional to the burden of obligations that each person has (Taufik, 2013). This is according to what John Rawls (1961) stated that "First, each person is to have the same right to the most extensive compatible with a similar liberty for others. This is as stated by John Rawls that "First: each person has equal right to the most extensive liberty compatible with a similar liberty for others". Second, social inequality, the economy must be arranged in such a way. By John Rawls (1961) it is said that "Second: social and economic inequalities are to be arranged so that they are both (a), which is expected to be everyone's advantage, and (b) attached to positions and offices open to all". Thus the following two principles need to be considered, namely the principle of difference and the principle of equal and fair opportunities. Both are expected to provide the greatest benefits for the less fortunate. The principle of equal and equitable difference and principle of opportunity is the principle of objective difference, meaning that the second principle ensures the realization of proportionality of the exchange of rights and obligations of the parties, so that (objective) differences of exchange can be accepted as long as they meet the requirements of good and fair faith. Thus, the first principle and the second principle cannot be separated from the others. In accordance with the principle of proportionality, Rawls justice will be realized if both conditions are applied comprehensively. Medical disputes require respect for patient autonomy and treat patients as equal partners in managing patient health. Provide opportunities for disputing individuals to present their narratives in a non-confrontational environment (Kumaralingam, 2017). Barnes (2010) stated that "facility liability for failure to take relatively inexpensive recommended precautions is warranted".

If the principle of the burden of reverse proof is used in medical disputes, the obligation to prove the element of medical error or medical negligence is carried out by the doctor and/or hospital as the defendant. The defendant must show proof that he is innocent or innocent. This manifests distributive justice by using the principle of difference and the

principle of equal and fair opportunities, and fulfilling the requirements of good and reasonable intention.

Medical disputes are unpleasant events for doctors. Medical disputes are the occurrence of clinical risks in patients, such as adverse clinical events or medical errors. The Indonesian Medical Council has provided guidelines in the form of Medical Practice Guidelines, Doctors and Dentists in Indonesia, which prevent clinical risk by applying the precautionary principle. The principle of prudence includes (1) trying to remain a good doctor (2) trying to always practice good medicine (3) Coupled with implementing special programs, such as: Patient Safety, Quality Assurance, Continuous Medical Education, Development Continuing Professionals, Sustainable Clinical Risk Management, Medical/Clinical Audit, Performance Audit, Learning from one's own mistakes and those of others.

## Conclusion

The use of responsibility based on the principle of error will make it difficult for patients to prove a doctor's or hospital's fault or negligence in the event of malpractice. The use of the presumption principle is always liable for asking for civil liability for doctors and/or hospitals if malpractice occurs will provide legal protection between doctors and or hospitals with patients in proportion and balance. Doctors and/or hospitals are given the means to prove that they are innocent of malpractice with the principle of the burden of reversed proof. Indeed the use of the principle of the burden of reversing proof will conflict with the principle of presumption of innocence. However, to protect patients due to unreasonable difficulties for patients due to the technical complexity of doctor's activities and difficult facts to prove, then the courage of judges to use the principle of the burden of reverse proof based on discretion and freedom of judges. For doctors in conducting medical practice, they must pay attention to the principle of caution by applying guidelines issued by the Indonesian Medical Council.

		Are tables and figures properly made?	Yes

**Comments:**

The topic of the paper is in line with the journal focus. The title of the paper correctly states the subject of the paper. The sequence of statements in introduction lead coherently to the purpose of the study. Terms are clear for the general audience and reader. The study reveals what the researcher intend and the discussion do not merely repeat the results. However please take into consideration the following: There are some typeset and punctuation errors. Some of the sentences need to be revised. Please check the paper for grammatical or typeset errors and send it for publication.

# From Liability Based on Fault Principle Towards Presumption of Liability Principle in Medical Disputes

## Abstract

Professional mistakes made by a doctor when doing patient care and causing the patient to become injured or die, then the actions of doctors are said to have committed malpractice. The Medical Practice Law provides the right to claim a civil suit to the court. In general, compensation claims are based on civil liability using Article 1365 BW. Article 1365 BW contains liability based on errors and it is not easy to determine when professional errors occur. Article 66 paragraph (3) of the Medical Practice Law stipulates that if there is a malpractice event, there is a possibility that the patient has the right to claim a civil suit to the court. The plaintiff (patient) will get compensation if he succeeds in proving the defendant's (doctor's) mistake, which is difficult for the patient to prove the doctor's fault. To provide objective and balanced legal protection for patients and doctors, the use of the presumption principle is always liable because it is difficult to prove the errors of the doctors. The use of the principle of presumption of being always liable will not burden the doctor because it is possible to use the principle of reverse proof. Doctors can use the principle of reversed evidence if the doctor is not guilty of malpractice by arguing that the doctor has done a good and proper job working professionally, and using the priority principle.

Keywords: fault principle, medical disputes, liability presumptions.

JEL Classification: K41

## Introduction

Health care is a basic national interest, because it deals with the realization of people's welfare. Health care needs are getting better along with the progress of a nation. Referring to Article 7 of the Health Law expressly states that the government must implement equitable and affordable health efforts, and be responsible for increasing the level of public health. The meaning of Article 27 paragraph 2 of the 1945 Constitution, namely "everyone has the right to have a decent job and life or human being" implies the need for a decent life in obtaining health services. As a national interest, especially related to achieving public welfare, it is imperative that the function of law has an important role in protecting national interests and in creating public welfare (Indar, 2013). In order to realize legal functions as "social integration", it is expected that the provision of health services can be guaranteed by the patient's interests and without harming the interests of other parties. The doctor's profession is a noble profession, so doctors serve by prioritizing the interests of others and society. Therefore, the noble profession is only entrusted to people who are polite, respectable, and have a paternalistic spirit (Trisnadi, 2017). Conboy et.al. (2010), and in He and Jiwei Qian (2016), stated that "the doctor-patient relationship is central to the practice of medicine and vital for the delivery of health services. Many studies have found that healthy interactions between physicians and patients can greatly enhance the quality of care and patients' well-

being". Kaba and Sooriakumaran (2007), cited in He and Jiwei Qian (2016), stated that "with the remarkable transformation of the doctor–a patient relationship from benevolent paternalism to one characterized by contractual consumerism, recent decades have witnessed a surge of medical disputes worldwide". The relationship between law and medicine is not all negative, but the law has contributed significantly to patient rights and medical practice (Rabinovich-Ein, 2011). After a doctor has a license to practice, there is a legal relationship for the implementation of medical practices that each party (patient and doctor) has autonomy (freedom, rights and obligations) in having two ways of communication and interaction. The law provides protection for both parties through a legal instrument called informed consent. According to the Minister of Health Regulation Number 290/MENKES/PER/III/2008 that medical approval is an agreement given by a patient or close family after getting a full explanation of the action of medicine or dentistry to be performed on the patient. Informed consent (or medical approval) is an agreement given by the patient or their family based on an explanation of the medical action to be performed on the patient. The object in legal relations is health services to patients (Iswandari, 2006). In contrast to the legal relationship in general, the legal relationship between patients and doctors (and dentists) is a maximum effort for the recovery of patients who are carried out carefully (meeting with a doctor), so that the legal relationship is called a business or raises business engagement.

In the concept of civil law, compensation can be submitted because there is default or because of an unlawful act. Therefore, the form of responsibility in civil law can be classified into two, namely first, contractual responsibilities, and second, responsibility for unlawful actions. The difference between contractual responsibility and the responsibility for illegal actions is whether or not there is an agreement in legal relations. If there is agreement, responsibility is contractual responsibility (Agustina et al., 2012; Hernoko, 2016). Whereas if there is no agreement, there are parties who harm other parties with the principle of illegal acts. Examples of unlawful actions are if a surgeon for negligence has left gauze or tools in the patient's body so that the patient has an infection which results in the patient suffering even because the complications that occur cause the patient to die (Astuti, 2017).

In a contractual legal perspective, it is said that "Contract agreement obligation is the primary means for the parties to create their legal norms that will rule the behavior of their own. Rights and obligations arising from the contract are determined by what is mutually agreed (exchanged) by the parties through their statements" (Hernoko et al., 2017). The relationship between doctors and patients in the implementation of medical practice is known as legal relations. Legal relations in the context of engagement law constitute an agreement that occurs from the agreement. Therefore the legal relationship between doctors and patients occurs from a therapeutic agreement. The agreement known in the field of health services is a therapeutic agreement (transaction). Therapeutic agreements are agreements between doctors and patients, in the form of legal relationships that cause rights and obligations for both parties. Objects in this agreement are therapeutic efforts for patient recovery (Nasution, 2005). In the therapeutic agreement, both doctors and patients have the rights and obligations that must be fulfilled. The rights and obligations of doctors and patients are regulated in Articles 50 to 53 of Law Number 29 of 2004 (Nuryanto, 2012). Thus, if the therapeutic agreement is not met by a doctor, the patient will claim on the legal basis that there is an omission or error.

In agreement legal theory, there are 2 (two) types of agreements, namely: 1. Business engagement, it is an agreement where each party gives maximum effort to reach the intended agreement. In this case, the priority is business, and 2. Engagement of results, it is an

agreement based on agreed results, meaning that each party gives the best effort to achieve what has been agreed. In this case, the priority is results.

In such contractual relationships, there may be achievements provided by service providers that cannot be measured but there are also benefits provided by service providers that can be measured (some of which are generated by businesses). In line with Sidharta, which states that the types of services provided in the relationship between professional service providers and users of professional services can be divided into two types of services: promised services to produce something and services that are committed to striving for something (Shidarta, 2009). If the two types of agreements above are linked to a therapeutic agreement, then the therapeutic agreement can be categorized in the business agreement, because the doctor will be difficult or impossible to be required to be able to cure his patients. So what is demanded from a doctor is maximum effort and earnest in doing healing based on good medical science standards. Likewise for patients, they are required to try to carry out recommendations and doctor's orders so that the pain can be cured. Both parties, namely doctors and patients are required to try as much as possible to cure an illness. Although the legal relationship between the patient and the doctor is not based on the results but rather on the effort that must be made, it is implied that the effort that must be made is an effort that is in accordance with the applicable standards. Even though the legal relationship between doctors and patients is a maximum effort, it is possible for compensation claims to be based on violating the law that the doctor must account for from the aspect of civil law.

Whereas the lawsuit filed under the law violates the law based on Article 1365 BW, generally addressed to doctors who perform medical malpractice. According to Munir Fuady, as quoted by Bambang Heryanto, that malpractice has an understanding that every medical action is carried out by doctors for patients, both in terms of diagnosis, therapy and management of diseases carried out in violation of law, propriety, decency, and professional principles intentional or not intentional or misdirected which causes pain, disability, bodily injury, death and other damage that causes the doctor to be responsible for administrative, civil or criminal responsibility, generally carried out in cases of medical malpractice. Hermien Hadiati Koeswadji quoted the opinion of John D. Blum as saying that medical malpractice is one form of professional negligence that patients can be asked to compensate for in the event of an injury or disability caused directly by the doctor in performing measurable professional actions (Heryanto, 2010). In fact, it is not easy to establish the existence of malpractice that there is professional negligence carried out by the doctor at the time of the treatment and there are others who are harmed by the actions of the doctor.

The law does not impose restrictions on illegal acts, which must be interpreted by the court. Initially it was intended that anything that was against the law would be illegal. However, since 1919, a court ruling that has given an understanding that an act or negligence with one of: (1) Violates the rights of others (2) Contrary to the legal obligations of the perpetrator (3) Violating morals is generally adopted from good habits (4 ) Not in accordance with propriety in social life. A doctor can be wrong.

To determine the offender must pay compensation, there must be a close relationship between errors and losses that occur. That in order to be able to claim losses (compensation) due to negligence of the doctor, the patient must be able to prove the following four elements: (1) There is an obligation for doctors to service their patients (2) Doctors have violated the usual medical service standards (3) Plaintiffs (patients) suffer losses that can be requested for compensation from pain, disability, bodily injury, death and other damage (4) The fact that pain, disability, bodily injury, death and other damage is caused by sub-standard actions.

To prove the existence of an action below the standard of health services by the patient (plaintiff) is an effort that is not easy because the patient has no knowledge of it. The case involving Dr. Yenny Wiyarni Abbas, Spa who was sued by Ibrahim Blegur for the death of his son named Ananda Falya Rafani Blegur based on illegal acts for medical treatment. By Dr. Yenny Wiyarni Abbas, Spa was appealed with a lawsuit Number 462/Pdt/2016/PT.BDG and was decided by the Bandung High Court, that Dr. Yenny Wiyarni Abbas, Spa found no errors, because there was no substantial medical evidence.

Based on the description above, legal issues are formulated as follows:

1. What are the elements of liability based on faults in medical disputes?
2. What is the urgency to use the principle of presumption of liability principle to medical disputes?

## **Elements Liability based on fault on Medical Dispute**

Implicitly Article 66 paragraph (1) of Law No. 29 of 2004 concerning Medical Practice explains that medical disputes are disputes that occur because the interests of patients are harmed by the actions of doctors who carry out these medical practices. Medical disputes in health services provide legal consequences that require the responsibility of the doctor. The legal responsibility of a doctor arises when medical negligence occurs with a doctor. The attitude or action can be interpreted as doing something that is not supposed to be done or not doing something that should be done or not doing something that is a reasonable person based on ordinary considerations that generally regulates human events, will do, or have done something natural and heart careful it just won't do. In fact, in handling patients, there is often a different perspective between patients and doctors with lawsuits or claims to doctors who have committed medical negligence (Nasser, 2011).

The aspect of civil law regarding a patient's claim to a doctor who handles it is almost a matter of compensation claims. Article 1365 BW states that every act that violates the law, which brings harm to another person, requires that the person who caused the wrongdoing to issue the loss compensates for the loss. Unlawful acts in its development have developed into 4 (four) criteria, first, violating the rights of others; or second, contrary to the legal obligations of the perpetrator; or third, violating the rules of moral conduct; or fourth, which contradicts courtesy, carefulness and caution that a person must have in relation to fellow citizens or with other people's property.

If a patient who feels aggrieved wants to file a lawsuit based on an unlawful act against the doctor, then he must prove that there has been an unlawful act with the criteria mentioned above. In addition, patients also have to prove that there is a causal relationship between violating the law and the loss suffered. A claim that is based on an unlawful act can be directed against the perpetrator of the act itself, because he made a mistake, negligence, was not careful which caused harm to others. Claims can also be directed against people responsible for their dependents or their items under their control.

Therefore, the reason for the lawsuit is not appropriate if it is only based on Article 1365 Burgerlijk Wetboek (Indonesian Civil Code), but also based on Article 1366 Burgerlijk Wetboek. This is caused by theory or doctrine, medical malpractice by doctors, consists of

three things (Wahyudi, 2011). First, Intentional Professional Misconducts, who are found guilty/bad practice if the doctor practices violations of standards and is done intentionally. Doctors practice by ignoring standards and intentional. Practice doctors by ignoring standards in existing rules and there is no element of negligence. Secondly, Negligence or unintentional negligence, namely a doctor who is due to negligence resulting in a patient's disability or death. A doctor fails to do something that must be done in accordance with medical science. This category of malpractice can be prosecuted, or punished if proven in court. Third, Lack of Skill, ie doctors take medical action but are incompetent or less competent.

The definition of the element of error referred to in Article 1365 BW based on the concept of civil law about this error can be distinguished between the definition of errors in the broadest sense and understanding errors in the narrow sense. The meaning of error in the broadest sense is to enter intentions and neglect. The meaning of intention is that the action taken is known and desired by the perpetrator. Whereas negligent understanding is an action in which the perpetrator knows the possible consequences that harm others (Setiawan, 2008).

Negligence is a form of accidental error, but it is also not something that happens by accident. In this omission, there is no malice from the perpetrator. Negligence in carrying out medical actions causes patient dissatisfaction with doctors in making treatment efforts in accordance with the medical profession. Such negligence causes loss on the part of the patient. Thus, a doctor other than being the subject of civil liability on the basis of default and violating the law can also be prosecuted on the basis of negligence, which results in a loss. The claim on the basis of this negligence is provided in Article 1366 BW, which reads as follows: "A person is responsible, not only for damage caused by his actions but also for those caused by negligence or carelessness."

Law Number 36 of 2009 concerning Health regulates matters relating to the issue of negligence of health personnel in Article 29 and Article 58. Article 29 of Law Number 36 of 2009 stipulates that in the case of health workers suspected of committing negligence in carrying out their profession, Such negligence must be resolved before mediation. Article 58 of Law Number 36 Year 2009 regulates the right of every person to claim compensation to someone, health worker, and/or health service provider who experiences loss due to intentional or negligent health services received. Based on this provision, it appears that prosecution is directed at a person, health worker or health provider (hospital). In the context of violating the law, the hospital can be said to be a "participating (guilty)" party. Unlawful acts committed by two or more people cause there are parties who are referred to as participating (participating) guilty. When there are parties declared guilty, then the determination of liability is based on 1. How much each joint actor must compensate for the loss suffered by the injured party (patient) and 2. Determination of the joint actors dividing the burden of losses among them. Regarding the first thing, each actor is liable for the loss for all losses, with the understanding that if one of them has paid, the other is free from the obligation to pay, while in terms of the two obligations each actor is determined by the weight of each mistake (Nieuwenhuis, 1985).

Meanwhile, based on Law Number 44 of 2009 concerning Hospitals, compensation claims are only addressed to hospitals, which are caused by negligence of health workers in the hospital. If the losses incurred by intentional health workers at the hospital, compensation claims cannot be made to the hospital. The hospital will not be responsible if the loss is caused by an error in the meaning of an intentional health worker in the hospital (Wahyudi, 2011). The patient will file a lawsuit to the hospital if the patient knows and feels aggrieved by the actions of the health worker in the hospital. It is not easy for patients to state that the loss is caused by the actions of health workers. It can be unfortunate to happen to patients

who occur unexpectedly by health workers. Health workers have made appropriate and appropriate efforts, and permanent losses to patients, this does not include negligence of health workers. Therefore the patient must know the medical record so that the form of action taken by the health worker can be known to him. The liability charged to the hospital for the mistakes of doctors who work in hospitals is known as the principle of vicarious liability/corporate liability. The principle of vicarious liability means that the employer is liable for the loss of another party caused by the people/employees who are under his supervision. Meanwhile, the principle of corporate liability is defined as a corporation that houses a group of workers who have responsibility for the workers employed. In determining the existence of vicarious liability/corporate liability according to Paula Giliker it is needed "a relationship by which one may be liable for the harmful acts of others; the commission of wrongdoing by the employee or subordinate; and that liability is confined to a specific set of circumstances, be it within the course of employment" (Giliker, 2011).

The burden of proof when applying Article 1365 BW is given to patients or families of patients so that they will have difficulty in proving an element of error with the doctor. Thus, it is necessary to think about the use of other concepts of responsibility, meaning that they are not based on the element of error.

## **The Presumption of Liability Principle in Medical Disputes**

The use of Article 1365 BW gives the position of 2 parties, namely the perpetrator and the victim. The system of proof of the concept of liability based on errors incriminates victims as plaintiffs. The new plaintiff will receive compensation if he succeeds in proving the defendant's wrongdoing. In addition, proof of the element of causality between the act and the loss of the victim is borne by the victim as the plaintiff. This is in accordance with the evidentiary load system regulated in BW, namely Article 1865 BW. The proof system as stipulated in Article 1865 BW is also regulated equally in the Civil Procedure Law, namely Article 163 Herzien Inlandsch Reglement (HIR) or Article 283 Rechtreglement voor de Buitengewesten (RBg).

Filing a claim using Article 1365 BW for civil cases or civil disputes faces juridical weaknesses, namely the burden of proof of the element of error and the causal relationship made by the plaintiff. In a civil case, it is very difficult for the victim when he has to explain scientifically or technically the causal relationship between the defendant's actions (which contain elements of error Article 1365 BW or negligence Article 1366 BW) and the loss of the victim.

Basically, legal protection for doctors and patients is placed in an objective and balanced position. If you use the concept of liability based on errors (Article 1365 BW) it will be very difficult for the position of the patient (victim) to be able to prove the doctor's fault when the doctor does malpractice. According to Peter Mahmud Marzuki, liability is a certain form of responsibility. The definition of liability refers to the position of a person or legal entity that is considered to have to pay compensation after a legal event or legal action. For example, a person or other legal entity for committing an illegal act so that it can endanger the person or other legal entity. The term liability lies in the scope of private law (Marzuki, 2008). Therefore, in order to face difficulties in proving errors (including proof of negligence based on Article 1366 BW), then the principle of presumption by liability principle is carried out using the principle of presumption. The principle of presumption of liability principle

states that the defendant is always liable, until he can prove that he is innocent. Thus, the burden of proof is with the defendant (Sidharta, 2009).

The use of the presumption principle is always liable because it is difficult to prove medical errors or medical negligence to the doctor or hospital. The relationship between the doctor and the hospital is based on the implementation of the task. Thus, patients can also be protected by the burden of liability to the hospital based on the principle of vicarious liability/corporate liability. It is fair and reasonable to impose vicarious liability on employers, because employers are more likely to have the means to compensate victims than employees, a claim has been made as a result of activities carried out by employees on behalf of the employer. Employee activity tends to be part of the business activity of the employer, the employer by hiring employees to carry out activities will create illegal acts based on the risks carried out by the employee, the employee will, to a greater or lesser extent, be under the control of the employer.

The difficulty in proving the existence of malpractice requires complex and complex medical knowledge, and difficulties in obtaining the patient's medical records. The use of the principle of presumption of being always liable will not burden doctors and/or hospitals because it is possible to use the principle of reversing the burden of proof. Thus, doctors and/or hospitals can use the principle of reversing the burden of proof if the doctor and/or hospital do not feel guilty or negligent of malpractice, on the grounds that the doctor and/or hospital have done the job correctly.

The European Group on Tort Law (EGTL) publishes the Principles of European Tort Law (PETL). PETL as a starting point for the future discussion about the possibility of harmonization or even the unification of law violating the law (tort law) in Europe. The PETL text about proof load is described in the provisions set out in Part 2 of Chapter 4 PETL which reads as follows:

Article 4: 201 Reversal of the burden of proving fault in general

(1) The burden of proving fault may be reversed in the light of the gravity of the danger presented by the activity.

(2) The gravity of the danger is determined according to the seriousness of possible damage in such cases as well as the likelihood that such damage might actually occur.

Provisions relating to Article 4: 201 PELT are provisions concerning 'evidence' in Article 2: 105 PETL which states: "Damage must be proved according to normal procedural standards. "The damage is too difficult or too costly" (Giesen, 2010).

Ivo Giesen (2010) states that the reason for including the principle of the burden of reverse proof in PETL is First, trying to improve the plaintiff's position due to unreasonable difficulties for the plaintiff because of the technical complexity of the defendant's activities and difficult facts to prove. Furthermore it is said that the reversal of the burden of proof leads to tightening of responsibility and this must be able to be normatively justified. Second, that the burden of this reverse proof implies that the court was given discretionary power. In this case, the Dutch legal regulations are full of discretionary authority with the principle of fairness and justice mentioned in Article 150 of the Civil Procedure Code (Wetboek van

Burgerlijke Rechtsvordering), which allows Dutch courts to use their discretionary powers, but provides little guidance on the application of provisions intended.

Ivo Giesen (2010) acknowledged that the Dutch Supreme Court was not possible to use discretion to use the principle of the burden of reversed proof, so the hope was that legislators would amend their legal regulations. Reluctance not to use the principle of burden of reverse proof is easy to understand, because the rationale for proof reversal theory is that someone is considered guilty, until the person concerned can prove otherwise. This is certainly considered to be contrary to the presumption of innocence principle. However, the principle of reverse proof that will be used by doctors and/or hospitals in medical disputes is very relevant. This is to provide legal protection between doctors and patients proportionally and balanced. Proportional and balanced legal protection creates a distribution based on the principle of proportionality. According to Hans Kelsen, if the actions of an individual have caused a harmful effect on someone else, basically he can be free from civil sanctions by proving that he does not expect or does not want the harmful consequences of his actions and has fulfilled the legal obligation to take action under normal circumstances, it can avoid these harmful consequences (Kelsen, 1961). Proportional and balanced legal protection creates distributive justice. John Rawls tries to formulate two principles of distributive justice, as follows: First, the principle of greatest equality, that everyone must have equal rights to basic freedom to the greatest extent, the same width of freedom for all. This is the most basic (human rights) that everyone must have. In other words, only with the guarantee of the same freedom for all people will justice be realized (the principle of rights). The principle of greatest equality, is none other than the principle of equality of rights, is the principle that gives equality of rights and is of course inversely proportional to the burden of obligations that each person has (Taufik, 2013). This is according to what John Rawls (1961) stated that "First, each person is to have the same right to the most extensive compatible with a similar liberty for others. This is as stated by John Rawls that "First: each person has equal right to the most extensive liberty compatible with a similar liberty for others". Second, social inequality, the economy must be arranged in such a way. By John Rawls (1961) it is said that "Second: social and economic inequalities are to be arranged so that they are both (a), which is expected to be everyone's advantage, and (b) attached to positions and offices open to all". Thus the following two principles need to be considered, namely the principle of difference and the principle of equal and fair opportunities. Both are expected to provide the greatest benefits for the less fortunate. The principle of equal and equitable difference and principle of opportunity is the principle of objective difference, meaning that the second principle ensures the realization of proportionality of the exchange of rights and obligations of the parties, so that (objective) differences of exchange can be accepted as long as they meet the requirements of good and fair faith. Thus, the first principle and the second principle cannot be separated from the others. In accordance with the principle of proportionality, Rawls justice will be realized if both conditions are applied comprehensively. Medical disputes require respect for patient autonomy and treat patients as equal partners in managing patient health. Provide opportunities for disputing individuals to present their narratives in a non-confrontational environment (Kumaralingam, 2017). Barnes (2010) stated that "facility liability for failure to take relatively inexpensive recommended precautions is warranted".

If the principle of the burden of reverse proof is used in medical disputes, the obligation to prove the element of medical error or medical negligence is carried out by the doctor and/or hospital as the defendant. The defendant must show proof that he is innocent or innocent. This manifests distributive justice by using the principle of difference and the principle of equal and fair opportunities, and fulfilling the requirements of good and reasonable intention.

Medical disputes are unpleasant events for doctors. Medical disputes are the occurrence of clinical risks in patients, such as adverse clinical events or medical errors. The Indonesian Medical Council has provided guidelines in the form of Medical Practice Guidelines, Doctors and Dentists in Indonesia, which prevent clinical risk by applying the precautionary principle. The principle of prudence includes (1) trying to remain a good doctor (2) trying to always practice good medicine (3) Coupled with implementing special programs, such as: Patient Safety, Quality Assurance, Continuous Medical Education, Development Continuing Professionals, Sustainable Clinical Risk Management, Medical/Clinical Audit, Performance Audit, Learning from one's own mistakes and those of others.

## Conclusion

The use of responsibility based on the principle of error will make it difficult for patients to prove a doctor's or hospital's fault or negligence in the event of malpractice. The use of the presumption principle is always liable for asking for civil liability for doctors and/or hospitals if malpractice occurs will provide legal protection between doctors and or hospitals with patients in proportion and balance. Doctors and/or hospitals are given the means to prove that they are innocent of malpractice with the principle of the burden of reversed proof. Indeed the use of the principle of the burden of reversing proof will conflict with the principle of presumption of innocence. However, to protect patients due to unreasonable difficulties for patients due to the technical complexity of doctor's activities and difficult facts to prove, then the courage of judges to use the principle of the burden of reverse proof based on discretion and freedom of judges. For doctors in conducting medical practice, they must pay attention to the principle of caution by applying guidelines issued by the Indonesian Medical Council.

Distinguished Professor,

Thank you for taking into consideration for disseminate your research results with *Journal of Advanced Research in Law and Economics*!

Your paper *From Liability Based on Fault Principle Towards Presumption of Liability Principle In Medical Disputes* was accepted for publication in *Journal of Advanced Research in Law and Economics*, Volume IX, Issue 5(43), Fall 2019, scheduled for publication in the following weeks.

After the publication on the website, the metadata will be automated exported for indexation to all databases in which the Journal is currently indexed: SCOPUS, RePEc, CEEOL, EBSCO, ProQuest, Cabell's Directory.

In order to complete all the publication requirements, kindly send as soon as possible the Copyright Agreement and Publishing Agreement attached, filled and signed in handwritten by all the authors of the paper. Moreover, kindly perform the payment in as it was indicated in ProForma Invoice attached. As payment detail please specify the full name of the first author and JARLE, 5(43).

Also the reviewers indicated the following corrections to be made until 26nd August, 2019:

1. Format the paper accordingly with the Template for Authors attached;
2. Cite inside the text all the items listed in References section or removed these if you do not included in text;
3. please insert JEL Classification Codes (for more details please see: <https://www.aeaweb.org/econlit/jelCodes.php?view=econlit>)

4. In order to increase the visibility of ASERS Publishing House in European publishing industry please cite in your paper some related research papers from archive of JARLE (Journal of Advanced Research in law and Economics - <https://journals.aserspublishing.eu/jarle/issue/archive>), JAES (Journal of Applied Economic Sciences - <http://cesmaa.org/Extras/JAESArchive>), JARM (Journal of Advanced Research in Management - <https://journals.aserspublishing.eu/jarm/issue/archive>), JASF (Journal of Advanced Studies in Finance - <https://journals.aserspublishing.eu/jasf/issue/archive>), TPREF (Theoretical and Practical Research in Economic Fields - <https://journals.aserspublishing.eu/tpref/issue/archive>)

We expect all the corrections until 26nd August, 2019. after this period consider your paper postponed for publication if we will receive a feed-back from you or canceled for publication in the absence of a feed-back.

If you will have any further questions, kindly do not hesitate to ask!

Sincerely yours,

Madalina Constantinescu

**Abstract:** (Arial Narrow 10 pt, bold, alignment left, Indentation None, Spacing 6pt After and Before)

The abstract should summarize the content and conclusions of the paper in less than 200 words (Typically around 10 sentences) focusing on what your research is about, what methods have been used, and the results of your research. It should not contain any references or displayed equations. (Typeset the abstract in 10 pt, regular, justify alignment, First paragraph Indentation None, next paragraph Indentation 1 cm, Line spacing Single).

**Keywords:** (Arial Narrow 10 pt, bold, alignment left, Indentation None, Spacing 6pt After and Before): keyword 1; keyword 2; ...keyword 6. (Arial Narrow 10 pt, regular, alignment left, Indentation None, Spacing 6pt After and Before)

Keywords will be used to index the article in scientific databases and on search engines. These keywords will help others to find your article quickly and accurately, so think of them as the labels for your article. Moreover, a strong correlation exists between online hits and subsequent citations for journal articles.

**JEL Classification:** (Arial Narrow 10 pt, bold, alignment left, Indentation None, Spacing 6pt After and Before): JEL Code1; JEL Code2; .....; JEL Code6 (Arial Narrow 10 pt, regular, alignment left, Indentation None, Spacing 6pt After and Before).

The JEL Classification System is a standard method of classifying scholarly literature in the field of economics. The guide provides JEL Codes application guidelines, keywords, and examples of items within each classification is available at: <https://www.aeaweb.org/econlit/jelCodes.php?view=jel>

**Introduction** (Arial Narrow 11 pt, bold, alignment left, Indentation None, Spacing 6pt After and Before)

Text of the introduction. No more than 15 lines. (Arial Narrow, 11 pt, regular, Alignment justify, First paragraph Indentation None, next paragraph Indentation 1 cm, Line spacing Single).

**1. Literature Review / State-of-Arts / Research Background** (Arial Narrow 11 pt, bold, alignment left, Indentation None, Spacing 6 pt After and Before)

In the context of your research paper the literature review should be a critical synthesis of previous research in the subject field. The evaluation of the literature leads logically to the research question. Who is doing what? Who has done what? Who first did it or published it? Taken from published papers, research monographs, catalogues etc. based on primary sources. Offering a, probably new, structured view of the field of study.

(Text should be written in Arial Narrow, 11 pt, Alignment Justify, Line spacing Single, First Paragraph Indentation None, in rest of the text, First line Indentation at 1cm).

**2. Methodology** (Arial Narrow 11 pt, bold, alignment left, Indentation None, Spacing 6 pt After and Before)

Description and justification of the research methods used. Normally, the methods will be selected from known and proven examples. In special cases the development of a method may be a key part of the research, but then this will have been described in Introduction section and reviewed in first one.

---

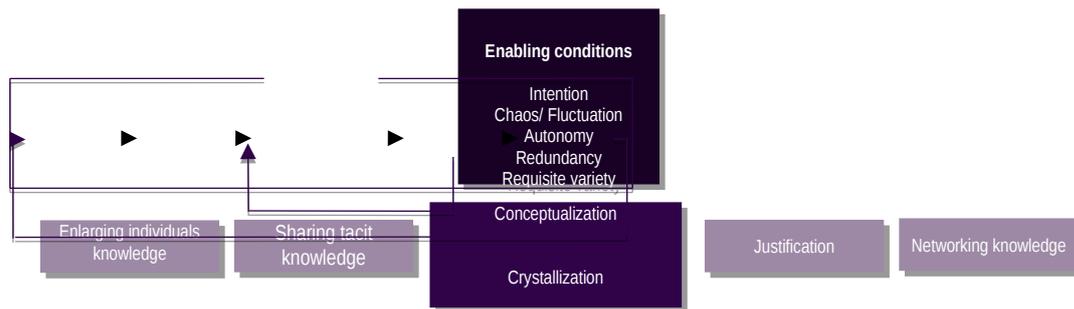

<sup>1</sup> Institutional postal address (Typeset in Arial Narrow, 10 pt, justify, Indentation 1 cm, line space Single).

Authors are encouraged to have their contribution checked for grammar. (The text should be typeset in Arial Narrow, 11 pt, Line spaces Single, Alignment justify, First Paragraph Indentation None, in rest of the text, First line Indentation at 1cm).

**Figures** should be inserted in the text nearest their first references. All components should be grouping. Figures are to be sequentially numbered in Arabic Numeral, at 10 pt, regular. All the Figures must be in editable format and not presented as an image. Obtain permission and include the acknowledgement required by the copyright holder if a figure is being reproduced from another source, as we specify in Publishing Agreement and Copyright Agreement.

*Sample:*

**Figure 1.** Title of the Figure (Typeset in Arial Narrow 10 pt, cantered, Indentation none, Spacing 6 pt After and Before)

**Source:** .... (Arial Narrow 10 pt, Alignment justify, Indentation First line None).

**Tables** should be numbered sequentially in the text. The tables must have a title, centralized above. Typeset tables and captions in 10 pt. Displayed tables are to be centred on the page width. Row Specify Height 0,7 cm, AutoFit to Window, data inside the Table must be written in American English, using comma separators.

*Sample:*

**Table 1.** Title of the Table (Arial Narrow, 10 pt, Alignment Centred, Regular, Spacing 6 pt After and Before)

Tranche	Spread (basis point) (Gaussian copula)	Spread (basis point) (Student copulas)
0% à 10% (Equity)	2,952.4	3,172.895
10% à 30% (Mezzanine)	779.3024	762.065
30% à 100 % (Senior)	43.4713	30.210

**Source:** .... (Arial Narrow 10 pt, Alignment justify, Indentation First line None, Spacing 6 pt After and Before).

**Mathematical Expressions.** Displayed equations (Arial Narrow 11 pt, Regular, Alignment Justify, Indentation First line 1 cm) should be numbered consecutively, with the number set in right sight and enclosed in parentheses. Equations should be referred to in abbreviated form, e.g. Equation (1), (2), ... (n). in multiple/line equations, the number should be given on the last line.

**3. Case studies/experiments/ demonstrations/ application functionality** (Arial Narrow 11 pt, bold, alignment left, Indentation None, Spacing 6 pt After and Before)

Description of the new studies/ software/ artwork and the process of production. What has been done, how was it achieved and what was the rationale? This can be, for example, a report on the design and execution of a set of experiments, the development of an innovative software system or the making of innovative art works. If so, this chapter will illuminate it by explaining, at the very least, what is important and new about it.

(The text should be typeset in Arial Narrow, 11 pt, Line spaces Single, Alignment justify, First Paragraph Indentation None, in rest of the text, First line Indentation at 1cm).

**Conclusions and Further Research** (Arial Narrow 11 pt, bold, alignment left, Indentation None, Spacing 6 pt After and Before)

Conclusions must have wider perspective-implications for other broader areas and domains. Future Work and Outstanding Questions must arise from Conclusions.

(The text should be typeset in Arial Narrow, 11 pt, Line spaces Single, Alignment justify, First Paragraph Indentation None, in rest of the text, First line Indentation at 1cm).

**References** (Arial Narrow 11 pt, bold, alignment left, Indentation None, Spacing 6 pt After and Before)

References are to be listed in the alphabetically order and numbered in Arabic numerals in brackets, e.g. [1], (Typeset in Arial Narrow, 11 pt, Justify alignment, Indentation Hanging 0,63 cm, Spacing: Before 0 pt; After 6 pt.) References are strictly defined. Follow the style shown in these examples:

**Submissions Format:** *Journal of Advanced Research in Law and Economics* follows the format of the Chicago Manual of Style, 15th edition, Chapter 16. A brief guide to citation style may be found at [http://www.chicagomanualofstyle.org/tools\\_citationguide.html](http://www.chicagomanualofstyle.org/tools_citationguide.html).

**Works Cited entries** should contain author, year, title, volume, and page numbers for articles. Below are some common examples of materials. Each example is given first in humanities style (a note [N], followed by a bibliographic entry [B]) and then in author-date style (an in-text citation [T], followed by a reference-list entry [R]). For numerous specific examples, see chapters 16 and 17 of *The Chicago Manual of Style*, 15th edition.

Online sources that are analogous to print sources (such as articles published in online journals, magazines, or newspapers) should be cited similarly to their print counterparts but with the addition of a URL. Some publishers or disciplines may also require an access date. For online or other electronic sources that do not have a direct print counterpart (such as an institutional Web site or a Weblog), give as much information as you can in addition to the URL. The following examples include some of the most common types of electronic sources.

## Abstract:

Professional mistakes made by a doctor when doing patient care and causing the patient to become injured or die, then the actions of doctors are said to have committed malpractice. The Medical Practice Law provides the right to claim a civil suit to the court. In general, compensation claims are based on civil liability using Article 1365 BW. Article 1365 BW contains liability based on errors and it is not easy to determine when professional errors occur. Article 66 paragraph (3) of the Medical Practice Law stipulates that if there is a malpractice event, there is a possibility that the patient has the right to claim a civil suit to the court. The plaintiff (patient) will get compensation if he succeeds in proving the defendant's (doctor's) mistake, which is difficult for the patient to prove the doctor's fault. To provide objective and balanced legal protection for patients and doctors, the use of the presumption principle is always liable because it is difficult to prove the errors of the doctors. The use of the principle of presumption of being always liable will not burden the doctor because it is possible to use the principle of reverse proof. Doctors can use the principle of reversed evidence if the doctor is not guilty of malpractice by arguing that the doctor has done a good and proper job working professionally, and using the priority principle.

**Keywords:** fault principle, medical disputes, liability presumptions.

**JEL Classification:** K41

## Introduction

Health care is a basic national interest, because it deals with the realization of people's welfare. Health care needs are getting better along with the progress of a nation. Referring to Article 7 of the Health Law expressly states that the government must implement equitable and affordable health efforts, and be responsible for increasing the level of public health. The meaning of Article 27 paragraph 2 of the 1945 Constitution, namely "everyone has the right to have a decent job and life or human being" implies the need for a decent life in obtaining health services. As a national interest, especially related to achieving public welfare, it is imperative that the function of law has an important role in protecting national interests and in creating public welfare (Indar, 2013). In order to realize legal functions as "social integration", it is expected that the provision of health services

<sup>1</sup> Jl. Dukuh Kupang XXV No.54, Dukuh Kupang, Kec. Dukuhpakis, Kota SBY, Jawa Timur 60225

<sup>2</sup> Jl. Dukuh Kupang XXV No.54, Dukuh Kupang, Kec. Dukuhpakis, Kota SBY, Jawa Timur 60225

<sup>3</sup> Jl. Dukuh Kupang XXV No.54, Dukuh Kupang, Kec. Dukuhpakis, Kota SBY, Jawa Timur 60225

can be guaranteed by the patient's interests and without harming the interests of other parties. The doctor's profession is a noble profession, so doctors serve by prioritizing the interests of others and society. Therefore, the noble profession is only entrusted to people who are polite, respectable, and have a paternalistic spirit (Trisnadi, 2017). Conboy et.al. (2010), and in He and Jiwei Qian (2016), stated that "the doctor-patient relationship is central to the practice of medicine and vital for the delivery of health services. Many studies have found that healthy interactions between physicians and patients can greatly enhance the quality of care and patients' well-being". Kaba and Sooriakumaran (2007), cited in He and Jiwei Qian (2016), stated that "with the remarkable transformation of the doctor–a patient relationship from benevolent paternalism to one characterized by contractual consumerism, recent decades have witnessed a surge of medical disputes worldwide". The relationship between law and medicine is not all negative, but the law has contributed significantly to patient rights and medical practice (Rabinovich-Ein, 2011). After a doctor has a license to practice, there is a legal relationship for the implementation of medical practices that each party (patient and doctor) has autonomy (freedom, rights and obligations) in having two ways of communication and interaction. The law provides protection for both parties through a legal instrument called informed consent. According to the Minister of Health Regulation Number 290/MENKES/PER/III/2008 that medical approval is an agreement given by a patient or close family after getting a full explanation of the action of medicine or dentistry to be performed on the patient. Informed consent (or medical approval) is an agreement given by the patient or their family based on an explanation of the medical action to be performed on the patient. The object in legal relations is health services to patients (Iswandari, 2006). In contrast to the legal relationship in general, the legal relationship between patients and doctors (and dentists) is a maximum effort for the recovery of patients who are carried out carefully (meeting with a doctor), so that the legal relationship is called a business or raises business engagement.

In the concept of civil law, compensation can be submitted because there is default or because of an unlawful act. Therefore, the form of responsibility in civil law can be classified into two, namely first, contractual responsibilities, and second, responsibility for unlawful actions. The difference between contractual responsibility and the responsibility for illegal actions is whether or not there is an agreement in legal relations. If there is agreement, responsibility is contractual responsibility (Agustina et al., 2012; Hernoko, 2016). Whereas if there is no agreement, there are parties who harm other parties with the principle of illegal acts. Examples of unlawful actions are if a surgeon for negligence has left gauze or tools in the patient's body so that the patient has an infection which results in the patient suffering even because the complications that occur cause the patient to die (Astuti, 2017).

In a contractual legal perspective, it is said that "Contract agreement obligation is the primary means for the parties to create their legal norms that will rule the behavior of their own. Rights and obligations arising from the contract are determined by what is mutually agreed (exchanged) by the parties through their statements" (Hernoko et al., 2017). The relationship between doctors and patients in the implementation of medical practice is known as legal relations. Legal relations in the context of engagement law constitute an agreement that occurs from the agreement. Therefore the legal relationship between doctors and patients occurs from a therapeutic agreement. The agreement known in the field of health services is a therapeutic agreement (transaction). Therapeutic agreements are agreements between doctors and patients, in the form of legal relationships that cause rights and obligations for both parties. Objects in this agreement are therapeutic efforts for patient recovery (Nasution, 2005). In the therapeutic agreement, both doctors and patients have the rights and obligations that must be fulfilled. The rights and obligations of doctors and patients are regulated in Articles 50 to 53 of Law Number 29 of 2004 (Nuryanto, 2012). Thus, if the therapeutic agreement is not met by a doctor, the patient will claim on the legal basis that there is an omission or error.

In agreement legal theory, there are 2 (two) types of agreements, namely: 1. Business engagement, it is an agreement where each party gives maximum effort to reach the intended agreement. In this case, the priority is business, and 2. Engagement of results, it is an agreement based on agreed results, meaning that each party gives the best effort to achieve what has been agreed. In this case, the priority is results.

In such contractual relationships, there may be achievements provided by service providers that cannot be measured but there are also benefits provided by service providers that can be measured (some of which are generated by businesses). In line with Sidharta, which states that the types of services provided in the relationship between professional service providers and users of professional services can be divided into two types of services: promised services to produce something and services that are committed to striving for something (Shidarta, 2009). If the two types of agreements above are linked to a therapeutic agreement, then the therapeutic agreement can be categorized in the business agreement, because the doctor will be difficult or impossible to be required to be able to cure his patients. So what is demanded from a doctor is maximum effort

and earnest in doing healing based on good medical science standards. Likewise for patients, they are required to try to carry out recommendations and doctor's orders so that the pain can be cured. Both parties, namely doctors and patients are required to try as much as possible to cure an illness. Although the legal relationship between the patient and the doctor is not based on the results but rather on the effort that must be made, it is implied that the effort that must be made is an effort that is in accordance with the applicable standards. Even though the legal relationship between doctors and patients is a maximum effort, it is possible for compensation claims to be based on violating the law that the doctor must account for from the aspect of civil law.

Whereas the lawsuit filed under the law violates the law based on Article 1365 BW, generally addressed to doctors who perform medical malpractice. According to Munir Fuady, as quoted by Bambang Heryanto, that malpractice has an understanding that every medical action is carried out by doctors for patients, both in terms of diagnosis, therapy and management of diseases carried out in violation of law, propriety, decency, and professional principles intentional or not intentional or misdirected which causes pain, disability, bodily injury, death and other damage that causes the doctor to be responsible for administrative, civil or criminal responsibility, generally carried out in cases of medical malpractice. Hermien Hadiati Koeswadji quoted the opinion of John D. Blum as saying that medical malpractice is one form of professional negligence that patients can be asked to compensate for in the event of an injury or disability caused directly by the doctor in performing measurable professional actions (Heryanto, 2010). In fact, it is not easy to establish the existence of malpractice that there is professional negligence carried out by the doctor at the time of the treatment and there are others who are harmed by the actions of the doctor.

The law does not impose restrictions on illegal acts, which must be interpreted by the court. Initially it was intended that anything that was against the law would be illegal. However, since 1919, a court ruling that has given an understanding that an act or negligence with one of: (1) Violates the rights of others (2) Contrary to the legal obligations of the perpetrator (3) Violating morals is generally adopted from good habits (4) Not in accordance with propriety in social life. A doctor can be wrong. To determine the offender must pay compensation, there must be a close relationship between errors and losses that occur. That in order to be able to claim losses (compensation) due to negligence of the doctor, the patient must be able to prove the following four elements: (1) There is an obligation for doctors to service their patients (2) Doctors have violated the usual medical service standards (3) Plaintiffs (patients) suffer losses that can be requested for compensation from pain, disability, bodily injury, death and other damage (4) The fact that pain, disability, bodily injury, death and other damage is caused by sub-standard actions. To prove the existence of an action below the standard of health services by the patient (plaintiff) is an effort that is not easy because the patient has no knowledge of it. The case involving Dr. Yenny Wiyarni Abbas, Spa who was sued by Ibrahim Blegur for the death of his son named Ananda Falya Rafani Blegur based on illegal acts for medical treatment. By Dr. Yenny Wiyarni Abbas, Spa was appealed with a lawsuit Number 462/Pdt/2016/PT.BDG and was decided by the Bandung High Court, that Dr. Yenny Wiyarni Abbas, Spa found no errors, because there was no substantial medical evidence.

Based on the description above, legal issues are formulated as follows:

1. What are the elements of liability based on faults in medical disputes?
2. What is the urgency to use the principle of presumption of liability principle to medical disputes?

### **Elements Liability based on fault on Medical Dispute**

Implicitly Article 66 paragraph (1) of Law No. 29 of 2004 concerning Medical Practice explains that medical disputes are disputes that occur because the interests of patients are harmed by the actions of doctors who carry out these medical practices. Medical disputes in health services provide legal consequences that require the responsibility of the doctor. The legal responsibility of a doctor arises when medical negligence occurs with a doctor. The attitude or action can be interpreted as doing something that is not supposed to be done or not doing something that should be done or not doing something that is a reasonable person based on ordinary considerations that generally regulates human events, will do, or have done something natural and heart careful it just won't do. In fact, in handling patients, there is often a different perspective between patients and doctors with lawsuits or claims to doctors who have committed medical negligence (Nasser, 2011).

The aspect of civil law regarding a patient's claim to a doctor who handles it is almost a matter of compensation claims. Article 1365 BW states that every act that violates the law, which brings harm to another person, requires that the person who caused the wrongdoing to issue the loss compensates for the loss. Unlawful acts in its development have developed into 4 (four) criteria, first, violating the rights of others; or second, contrary to the

legal obligations of the perpetrator; or third, violating the rules of moral conduct; or fourth, which contradicts courtesy, carefulness and caution that a person must have in relation to fellow citizens or with other people's property.

If a patient who feels aggrieved wants to file a lawsuit based on an unlawful act against the doctor, then he must prove that there has been an unlawful act with the criteria mentioned above. In addition, patients also have to prove that there is a causal relationship between violating the law and the loss suffered. A claim that is based on an unlawful act can be directed against the perpetrator of the act itself, because he made a mistake, negligence, was not careful which caused harm to others. Claims can also be directed against people responsible for their dependents or their items under their control.

Therefore, the reason for the lawsuit is not appropriate if it is only based on Article 1365 Burgerlijk Wetboek (Indonesian Civil Code), but also based on Article 1366 Burgerlijk Wetboek. This is caused by theory or doctrine, medical malpractice by doctors, consists of three things (Wahyudi, 2011). First, Intentional Professional Misconducts, who are found guilty/bad practice if the doctor practices violations of standards and is done intentionally. Doctors practice by ignoring standards and intentional. Practice doctors by ignoring standards in existing rules and there is no element of negligence. Secondly, Negligence or unintentional negligence, namely a doctor who is due to negligence resulting in a patient's disability or death. A doctor fails to do something that must be done in accordance with medical science. This category of malpractice can be prosecuted, or punished if proven in court. Third, Lack of Skill, ie doctors take medical action but are incompetent or less competent.

The definition of the element of error referred to in Article 1365 BW based on the concept of civil law about this error can be distinguished between the definition of errors in the broadest sense and understanding errors in the narrow sense. The meaning of error in the broadest sense is to enter intentions and neglect. The meaning of intention is that the action taken is known and desired by the perpetrator. Whereas negligent understanding is an action in which the perpetrator knows the possible consequences that harm others (Setiawan, 2008).

Negligence is a form of accidental error, but it is also not something that happens by accident. In this omission, there is no malice from the perpetrator. Negligence in carrying out medical actions causes patient dissatisfaction with doctors in making treatment efforts in accordance with the medical profession. Such negligence causes loss on the part of the patient. Thus, a doctor other than being the subject of civil liability on the basis of default and violating the law can also be prosecuted on the basis of negligence, which results in a loss. The claim on the basis of this negligence is provided in Article 1366 BW, which reads as follows: "A person is responsible, not only for damage caused by his actions but also for those caused by negligence or carelessness."

Law Number 36 of 2009 concerning Health regulates matters relating to the issue of negligence of health personnel in Article 29 and Article 58. Article 29 of Law Number 36 of 2009 stipulates that in the case of health workers suspected of committing negligence in carrying out their profession, Such negligence must be resolved before mediation. Article 58 of Law Number 36 Year 2009 regulates the right of every person to claim compensation to someone, health worker, and/or health service provider who experiences loss due to intentional or negligent health services received. Based on this provision, it appears that prosecution is directed at a person, health worker or health provider (hospital). In the context of violating the law, the hospital can be said to be a "participating (guilty)" party. Unlawful acts committed by two or more people cause there are parties who are referred to as participating (participating) guilty. When there are parties declared guilty, then the determination of liability is based on 1. How much each joint actor must compensate for the loss suffered by the injured party (patient) and 2. Determination of the joint actors dividing the burden of losses among them. Regarding the first thing, each actor is liable for the loss for all losses, with the understanding that if one of them has paid, the other is free from the obligation to pay, while in terms of the two obligations each actor is determined by the weight of each mistake (Nieuwenhuis, 1985).

Meanwhile, based on Law Number 44 of 2009 concerning Hospitals, compensation claims are only addressed to hospitals, which are caused by negligence of health workers in the hospital. If the losses incurred by intentional health workers at the hospital, compensation claims cannot be made to the hospital. The hospital will not be responsible if the loss is caused by an error in the meaning of an intentional health worker in the hospital (Wahyudi, 2011). The patient will file a lawsuit to the hospital if the patient knows and feels aggrieved by the actions of the health worker in the hospital. It is not easy for patients to state that the loss is caused by the actions of health workers. It can be unfortunate to happen to patients who occur unexpectedly by health workers. Health workers have made appropriate and appropriate efforts, and permanent losses to patients, this does not include negligence of health workers. Therefore the patient must know the medical record so that the form of action taken by the health worker can be known to him. The liability charged to the hospital for the mistakes of doctors who work in hospitals is known as the principle of vicarious liability/corporate liability. The principle of vicarious liability

means that the employer is liable for the loss of another party caused by the people/employees who are under his supervision. Meanwhile, the principle of corporate liability is defined as a corporation that houses a group of workers who have responsibility for the workers employed. In determining the existence of vicarious liability/corporate liability according to Paula Giliker it is needed "a relationship by which one may be liable for the harmful acts of others; the commission of wrongdoing by the employee or subordinate; and that liability is confined to a specific set of circumstances, be it within the course of employment" (Giliker, 2011).

The burden of proof when applying Article 1365 BW is given to patients or families of patients so that they will have difficulty in proving an element of error with the doctor. Thus, it is necessary to think about the use of other concepts of responsibility, meaning that they are not based on the element of error.

### **The Presumption of Liability Principle in Medical Disputes**

The use of Article 1365 BW gives the position of 2 parties, namely the perpetrator and the victim. The system of proof of the concept of liability based on errors incriminates victims as plaintiffs. The new plaintiff will receive compensation if he succeeds in proving the defendant's wrongdoing. In addition, proof of the element of causality between the act and the loss of the victim is borne by the victim as the plaintiff. This is in accordance with the evidentiary load system regulated in BW, namely Article 1865 BW. The proof system as stipulated in Article 1865 BW is also regulated equally in the Civil Procedure Law, namely Article 163 Herzien Inlandsch Reglement (HIR) or Article 283 Rechtreglement voor de Buitengewesten (RBg).

Filing a claim using Article 1365 BW for civil cases or civil disputes faces juridical weaknesses, namely the burden of proof of the element of error and the causal relationship made by the plaintiff. In a civil case, it is very difficult for the victim when he has to explain scientifically or technically the causal relationship between the defendant's actions (which contain elements of error Article 1365 BW or negligence Article 1366 BW) and the loss of the victim.

Basically, legal protection for doctors and patients is placed in an objective and balanced position. If you use the concept of liability based on errors (Article 1365 BW) it will be very difficult for the position of the patient (victim) to be able to prove the doctor's fault when the doctor does malpractice. According to Peter Mahmud Marzuki, liability is a certain form of responsibility. The definition of liability refers to the position of a person or legal entity that is considered to have to pay compensation after a legal event or legal action. For example, a person or other legal entity for committing an illegal act so that it can endanger the person or other legal entity. The term liability lies in the scope of private law (Marzuki, 2008). Therefore, in order to face difficulties in proving errors (including proof of negligence based on Article 1366 BW), then the principle of presumption by liability principle is carried out using the principle of presumption. The principle of presumption of liability principle states that the defendant is always liable, until he can prove that he is innocent. Thus, the burden of proof is with the defendant (Sidharta, 2009).

The use of the presumption principle is always liable because it is difficult to prove medical errors or medical negligence to the doctor or hospital. The relationship between the doctor and the hospital is based on the implementation of the task. Thus, patients can also be protected by the burden of liability to the hospital based on the principle of vicarious liability/corporate liability. It is fair and reasonable to impose vicarious liability on employers, because employers are more likely to have the means to compensate victims than employees, a claim has been made as a result of activities carried out by employees on behalf of the employer. Employee activity tends to be part of the business activity of the employer, the employer by hiring employees to carry out activities will create illegal acts based on the risks carried out by the employee, the employee will, to a greater or lesser extent, be under the control of the employer.

The difficulty in proving the existence of malpractice requires complex and complex medical knowledge, and difficulties in obtaining the patient's medical records. The use of the principle of presumption of being always liable will not burden doctors and/or hospitals because it is possible to use the principle of reversing the burden of proof. Thus, doctors and/or hospitals can use the principle of reversing the burden of proof if the doctor and/or hospital do not feel guilty or negligent of malpractice, on the grounds that the doctor and/or hospital have done the job correctly.

The European Group on Tort Law (EGTL) publishes the Principles of European Tort Law (PETL). PETL as a starting point for the future discussion about the possibility of harmonization or even the unification of law violating the law (tort law) in Europe. The PETL text about proof load is described in the provisions set out in Part 2 of Chapter 4 PETL which reads as follows:

Article 4: 201 Reversal of the burden of proving fault in general

- (1) The burden of proving fault may be reversed in the light of the gravity of the danger presented by the activity.
- (2) The gravity of the danger is determined according to the seriousness of possible damage in such cases as well as the likelihood that such damage might actually occur.

Provisions relating to Article 4: 201 PELT are provisions concerning 'evidence' in Article 2: 105 PETL which states: "Damage must be proved according to normal procedural standards. "The damage is too difficult or too costly" (Giesen, 2010).

Ivo Giesen (2010) states that the reason for including the principle of the burden of reverse proof in PETL is First, trying to improve the plaintiff's position due to unreasonable difficulties for the plaintiff because of the technical complexity of the defendant's activities and difficult facts to prove. Furthermore it is said that the reversal of the burden of proof leads to tightening of responsibility and this must be able to be normatively justified. Second, that the burden of this reverse proof implies that the court was given discretionary power. In this case, the Dutch legal regulations are full of discretionary authority with the principle of fairness and justice mentioned in Article 150 of the Civil Procedure Code (Wetboek van Burgerlijke Rechtsvordering), which allows Dutch courts to use their discretionary powers, but provides little guidance on the application of provisions intended.

Ivo Giesen (2010) acknowledged that the Dutch Supreme Court was not possible to use discretion to use the principle of the burden of reversed proof, so the hope was that legislators would amend their legal regulations. Reluctance not to use the principle of burden of reverse proof is easy to understand, because the rationale for proof reversal theory is that someone is considered guilty, until the person concerned can prove otherwise. This is certainly considered to be contrary to the presumption of innocence principle. However, the principle of reverse proof that will be used by doctors and/or hospitals in medical disputes is very relevant. This is to provide legal protection between doctors and patients proportionally and balanced. Proportional and balanced legal protection creates a distribution based on the principle of proportionality. According to Hans Kelsen, if the actions of an individual have caused a harmful effect on someone else, basically he can be free from civil sanctions by proving that he does not expect or does not want the harmful consequences of his actions and has fulfilled the legal obligation to take action under normal circumstances, it can avoid these harmful consequences (Kelsen, 1961). Proportional and balanced legal protection creates distributive justice. John Rawls tries to formulate two principles of distributive justice, as follows: First, the principle of greatest equality, that everyone must have equal rights to basic freedom to the greatest extent, the same width of freedom for all. This is the most basic (human rights) that everyone must have. In other words, only with the guarantee of the same freedom for all people will justice be realized (the principle of rights). The principle of greatest equality, is none other than the principle of equality of rights, is the principle that gives equality of rights and is of course inversely proportional to the burden of obligations that each person has (Taufik, 2013). This is according to what John Rawls (1961) stated that "First, each person is to have the same right to the most extensive compatible with a similar liberty for others. This is as stated by John Rawls that "First: each person has equal right to the most extensive liberty compatible with a similar liberty for others". Second, social inequality, the economy must be arranged in such a way. By John Rawls (1961) it is said that "Second: social and economic inequalities are to be arranged so that they are both (a), which is expected to be everyone's advantage, and (b) attached to positions and offices open to all". Thus the following two principles need to be considered, namely the principle of difference and the principle of equal and fair opportunities. Both are expected to provide the greatest benefits for the less fortunate. The principle of equal and equitable difference and principle of opportunity is the principle of objective difference, meaning that the second principle ensures the realization of proportionality of the exchange of rights and obligations of the parties, so that (objective) differences of exchange can be accepted as long as they meet the requirements of good and fair faith. Thus, the first principle and the second principle cannot be separated from the others. In accordance with the principle of proportionality, Rawls justice will be realized if both conditions are applied comprehensively. Medical disputes require respect for patient autonomy and treat patients as equal partners in managing patient health. Provide opportunities for disputing individuals to present their narratives in a non-confrontational environment (Kumaralingam, 2017). Barnes (2010) stated that "facility liability for failure to take relatively inexpensive recommended precautions is warranted".

If the principle of the burden of reverse proof is used in medical disputes, the obligation to prove the element of medical error or medical negligence is carried out by the doctor and/or hospital as the defendant. The defendant must show proof that he is innocent or innocent. This manifests distributive justice by using the principle of difference and the principle of equal and fair opportunities, and fulfilling the requirements of good and reasonable intention.

Medical disputes are unpleasant events for doctors. Medical disputes are the occurrence of clinical risks in patients, such as adverse clinical events or medical errors. The Indonesian Medical Council has provided guidelines in the form of Medical Practice Guidelines, Doctors and Dentists in Indonesia, which prevent clinical risk by applying the precautionary principle. The principle of prudence includes (1) trying to remain a good doctor (2) trying to always practice good medicine (3) Coupled with implementing special programs, such as: Patient Safety, Quality Assurance, Continuous Medical Education, Development Continuing Professionals, Sustainable Clinical Risk Management, Medical/Clinical Audit, Performance Audit, Learning from one's own mistakes and those of others.

## Conclusion

The use of responsibility based on the principle of error will make it difficult for patients to prove a doctor's or hospital's fault or negligence in the event of malpractice. The use of the presumption principle is always liable for asking for civil liability for doctors and/or hospitals if malpractice occurs will provide legal protection between doctors and or hospitals with patients in proportion and balance. Doctors and/or hospitals are given the means to prove that they are innocent of malpractice with the principle of the burden of reversed proof. Indeed the use of the principle of the burden of reversing proof will conflict with the principle of presumption of innocence. However, to protect patients due to unreasonable difficulties for patients due to the technical complexity of doctor's activities and difficult facts to prove, then the courage of judges to use the principle of the burden of reverse proof based on discretion and freedom of judges. For doctors in conducting medical practice, they must pay attention to the principle of caution by applying guidelines issued by the Indonesian Medical Council.

From which, **corresponding author:**

First name: **Ari**

Last name: **Purwadi**

to be published by **ASERS Publishing** (hereinafter 'Publisher') in: ***Journal of Advanced Research in Law and Economics***, ISSN: 2068-696X, Journal DOI: <https://doi.org/10.14505/jarle>, website: <http://journals.aserspublishing.eu/jarle>, e-mail: jarle@aserspublishing.eu.

**Non-Exclusive License:**

We hereby grant to ASERS Publishing ('Publisher') a non-exclusive license to publish and distribute the article(s) referenced above and any supplemental tables, illustrations or other information submitted therewith that are intended for publication as part of the article (the 'Article') in all forms and media (whether now known or hereafter developed), throughout the world, in all

languages, for the full term of copyright, effective when and if the 'Article' is accepted for publication. This license includes the right to provide the 'Article' in electronic and online forms and systems. With respect to supplemental data that we wish to make accessible through a link in the 'Article', we hereby grant a non-exclusive license for such linking. If we have agreed with the 'Publisher' to make available such supplemental data on a site or through a service of ASERS Publishing, we hereby grant a non-exclusive license for such publication, posting and making available, and further permit indexing and archiving.

We agree that the 'Publisher' shall have first publication rights in the 'Article' and that ASERS Publishing retains exclusive rights in the definitive final version of the 'Article' that appears in the Newsletter and embodies all value-adding publisher activities including copy-editing, formatting and (if relevant) pagination ('the Published Article'). With respect to versions of the Article other than the Published Article, if we reproduce or authorize reproduction of the Article following publication, ASERS Publishing will be acknowledged as the first publisher of the Article and a link to the appropriate bibliographic citation (authors, newsletter, article title, volume issue, page numbers, DOI, and the link to the Published Article on ASERS Publishing' Platform) should be maintained.

**Authorship:**

If copyright is held by the employer, the employer or an authorized representative of the employer must sign. If the corresponding author signs, it is understood that this is with the authorization of the employer and the employer's acceptance of the terms of the transfer. Please confirm by marking the appropriate box following the signature line.

**Author Warranties:**

The undersigned Author(s) of the above-mentioned 'Article' here transfer any and all copyright-rights of the 'Article' to the 'Publisher'. The Author(s) warrants that the 'Article' is based on their original work and that the undersigned has the power and authority to make and execute this assignment. It is the author's responsibility to obtain written permission to quote material that has been previously published in any form. The 'Publisher' recognizes the retained rights noted below and grants to the above authors and employers for whom the work performed royalty-free permission to reuse their materials below. Authors may reuse all or portions of the above 'Article' in other works, excepting the publication of the 'Article' in the same form. Authors may reproduce or authorize others to reproduce the above 'Article' for the Author's personal use or for internal company use, provided that the source and 'Publisher' copyright notice are mentioned, that the copies are not used in any way that implies the 'Publisher' endorsement of a product or service of an employer, and that the copies are not offered for sale as such. Authors are not permitted to grant third party requests for reprinting, republishing or other types of reuse of the published 'Article'. The Authors may make limited distribution of all or portions of the above 'Article' prior to publication if they inform The 'Publisher' of the nature and extent of such limited distribution prior there to. Authors retain all proprietary rights in any process, procedure, or article of manufacture described in the 'Article'. This agreement becomes null and void if and only if the above 'Article' is not accepted and published by the 'Publisher', or is withdrawn by the author(s) before acceptance by the 'Publisher'.

If the 'Article' was prepared jointly with other authors, the corresponding author have informed the co-author(s) of the terms of this Copyright Agreement and that he/she is signing on their behalf as their agent, and represent that he/ she is authorized to do so.

## Journal of Advanced Research in Law and Economics Publishing Agreement

Copyright owner: ASERS Publishing

### Introductory clauses:

This Publishing Agreement (hereinafter 'Agreement') is entered into as of (insert date) Aug 24, 2019 (hereinafter 'Effective Date') by and between ASERS Ltd., doing business as ASERS Publishing (hereinafter 'Publisher'), for publishing in *Journal of Advanced Research in Law and Economics*, ISSN: 2068-696X, Journal DOI: <https://doi.org/10.14505/jarle>, website: <http://journals.aserspublishing.eu/jarle>, e-mail: jarle@aserspublishing.eu

and

### Author(s):

#1. First name:	<u>Ari</u>	Last name:	<u>Purwadi</u>
#2. First name:	<u>Umi</u>	Last name:	<u>Enggarsasi</u>
#3. First name:	<u>Suhandi</u>	Last name:	<u>Suhandi</u>
#4. First name:	_____	Last name:	_____
#5. First name:	_____	Last name:	_____
#6. First name:	_____	Last name:	_____

From which, **corresponding author**:

First name: Ari Last name: Purwadi

(hereinafter named as 'Author') concerning the publication of the article, a work currently titled (hereinafter 'Article'):  
***From Liability Based on Fault Principle Towards Presumption of Liability Principle in Medical Disputes***

and described as a research article accepted for publication in *Journal of Advanced Research in Law and Economics*, Volume ***IX***, Issue ***5(43), 2019***.

### 1. Data protection and Privacy:

The 'Author' understands that staff of ASERS Publishing, the 'Publisher' and its affiliated companies worldwide will be contacting him/ her concerning the publishing of the 'Article' and occasionally for marketing purposes (unless, with respect to such marketing, I tick the box below), and in case of publication of the 'Article', 'Author's' full name, and affiliation will be published in 'Journal' webpage and will be sent by the 'Publisher' to a third party as a metadata, to be indexed and abstracted.

I do not wish to receive news, promotions and special offers about products and services of ASERS Publishing and its affiliates worldwide.

### 2. Grant of rights

#### 2.1. Assignment of Copyright

We hereby assign to the Copyright Owner the copyright in the manuscript identified above and any tables, illustrations or other material submitted for publication as part of the manuscript (the 'Article'). This assignment of rights means that we have granted to the Copyright Owner the exclusive right to publish and reproduce the 'Article', or any part of the 'Article', in print, electronic and all other media (whether now known or later developed), in any form, in all languages, throughout the world, for the full term of copyright, and the right to license others to do the same, effective when the 'Article' is accepted for publication. This includes the right to enforce the rights granted hereunder against third parties. We completed and signed the Copyright Agreement.

## **2.2. Supplemental Materials**

With respect to Supplemental Materials that we wish to make accessible either through a link in the Article or on a site or through a service of the Copyright Owner, the Copyright Owner shall be entitled to publish, post, reformat, index, archive, make available and link to such Supplemental Materials on a non-exclusive basis in all forms and media (whether now known or later developed), and to permit others to do so. 'Supplemental Materials' shall mean additional materials that are not an intrinsic part of the 'Article', including but not limited to experimental data, e-components, encodings and software, and enhanced graphical, illustrative, video and audio material.

## **2.3. Reversion of rights**

Articles may sometimes be accepted for publication, but later rejected in the publication process, even in some cases after public posting, in which case all rights will revert to the author (see ASERS Publishing' withdrawal policy).

## **2.4. Revisions and addenda**

The 'Author(s)' understands that no revisions, additional terms or addenda to this Journal Publishing Agreement can be accepted without the Copyright Owner's express written consent. I understand that this Journal Publishing Agreement supersedes any previous agreements I have entered into with the Copyright Owner in relation to the Article from the date hereof.

## **2.5. Author Rights for Scholarly Purposes**

The 'Author(s)' understands that he/she retains or is hereby granted (without the need to obtain further permission) the Author Rights (see description below), and that no rights in patents, trademarks or other intellectual property rights are transferred to the Copyright Owner. The Author Rights include the right to use the Preprint, Accepted Manuscript and the Published Journal Article for Personal Use, Internal Institutional Use and for Scholarly Sharing.

In the case of the Accepted Manuscript and the Published Journal Article the Author Rights exclude Commercial Use (unless expressly agreed in writing by the Copyright Owner), other than use by the author in a subsequent compilation of the author's works or to extend the Article to book length form or re-use by the author of portions or excerpts in other works (with full acknowledgment of the original publication of the Article).

## **2.6. Other Rights**

All rights not expressly granted to the 'Publisher' shall be wholly reserved by the 'Author'. The 'Publisher' acknowledges that the general ideas and concepts contained in the 'Article' may be used by the 'Author' in the normal course of the Author's day-to-day business.

## **2.7. Territory**

The rights granted to the 'Publisher' in this 'Agreement' may be exploited throughout the world.

## **3. Author Representations/Ethics and Disclosure/Sanctions**

The 'Author(s)' affirms the Author Representations noted below, and confirm that he/she has reviewed and complied with the relevant Instructions to Authors, Ethics in Publishing policy, Declarations of Interest disclosure and information for authors from countries affected by sanctions (Iran, Cuba, Sudan, Burma, Syria, or Crimea). Please note that the 'Publisher' may require that all co-authors sign and submit Declarations of Interest disclosure forms. The 'Author(s)' is also aware of the publisher's policies with respect to:

### **▪ Retractions and withdrawal:**

#### **Article Withdrawal by ASERS Publishing**

Only used for Articles in Press which represent early versions of articles and sometimes contain errors, or may have been accidentally submitted twice. Occasionally, but less frequently, the articles may represent infringements of professional ethical codes, such as multiple submission, bogus claims of authorship, plagiarism, fraudulent use of data or the like. Articles in Press (articles that have been accepted for publication but which have not been formally published and will not yet have the complete volume/issue/page information) that include errors, or are discovered to be accidental duplicates of other published article(s), or are determined to violate our journal publishing ethics guidelines in the view of the editors (such as multiple submission, bogus claims of authorship, plagiarism, fraudulent use of data or the like), may be 'Withdrawn' from ASERS Publishing. Withdrawn means that the article content (HTML and PDF) is removed and replaced with a HTML page and PDF simply stating that the article has been withdrawn according to the ASERS Publishing Policy on Article in Press Withdrawal with a link to the current policy document.

#### **Article Withdrawal by 'Author(s)'**

The 'Author(s)' could withdrawal the 'Article' before acceptance for publication for objective reasons, and the withdrawal must be made written to the Editor in Chief of the Journal. In case that the 'Author(s)' withdrawal the 'Article' after the acceptance and the payment of publication fee has been performed, ASERS Publishing will not refund the publication fee.

The refund of publication fee could be possible only in case in which the 'Publisher' will not publish the 'Article' for any reasons, except the situation of plagiarism detection after the payment, or dual publication in any language of the same 'Article'. In such a cases, the 'Publisher' will retract the paper from the Journal, webpage and databases in which the Journal is indexed without any compensation for the 'Author(s)'.

### **Article Retraction**

Infringements of professional ethical codes, such as multiple submission, bogus claims of authorship, plagiarism, fraudulent use of data or the like. Occasionally a retraction will be used to correct errors in submission or publication. The retraction of an article by its authors or the editor under the advice of members of the scholarly community has long been an occasional feature of the learned world. Standards for dealing with retractions have been developed by a number of library and scholarly bodies, and this best practice is adopted for article retraction by ASERS Publishing:

- A retraction note titled 'Retraction: \_\_\_\_\_ [article title]' signed by the authors and/or the editor is published in the paginated part of a subsequent issue of the journal and listed in the contents list.
- In the electronic version, a link is made to the original article.
- The online article is preceded by a screen containing the retraction note. It is to this screen that the link resolves; the reader can then proceed to the article itself.
- The original article is retained unchanged save for a watermark on the .pdf indicating on each page that it is 'retracted'.
- The HTML version of the document is removed.

### **Article Removal: Legal limitations**

In an extremely limited number of cases, it may be necessary to remove an article from the online database. This will only occur where the article is clearly defamatory, or infringes others' legal rights, or where the article is, or we have good reason to expect it will be, the subject of a court order, or where the article, if acted upon, might pose a serious health risk. In these circumstances, while the metadata (Title and Authors) will be retained, the text will be replaced with a screen indicating the article has been removed for legal reasons.

### **Article Replacement**

In cases where the article, if acted upon, might pose a serious health risk, the authors of the original article may wish to retract the flawed original and replace it with a corrected version. In these circumstances the procedures for retraction will be followed with the difference that the database retraction notice will publish a link to the corrected re-published article and a history of the document.

### **Refund policy**

- It is a general principle of scholarly communication that the editor of a learned journal is solely and independently responsible for deciding which articles submitted to the journal shall be published. In making this decision the editor is guided by policies of the journal's editorial board and constrained by such legal requirements in force regarding libel, copyright infringement and plagiarism. An outcome of this principle is the importance of the scholarly archive as a permanent, historic record of the transactions of scholarship. Articles that have been published shall remain extant, exact and unaltered as far as is possible. However, very occasionally circumstances may arise where an article is published that must later be retracted or even removed. Such actions must not be undertaken lightly and can only occur under exceptional circumstances.
- In case of article withdrawal, article retraction, article removal from legal limitations, article replacement the author will not be refund, only if the withdrawal of the paper is made because of the delay in publishing which is more than 12 months from the moment of payment, by the fault of ASERS Publishing.
- The refund policy is not applicable in the following situations: the author(s) put pressure on Editorial Board's members or/and the Editor in Chief of the Journal to publish faster; bully Editorial Board's members or/and the Editor in Chief of the Journal; defamation and/or injuries brought to the Journal's or Publisher's reputation by the author(s). This will be applicable in cases in which the 'Publisher' respect the clauses and schedules of the 'Agreement' and the 'Author' understand and agree this clause by signing the 'Agreement'.

### **Malpractice Statement of ASERS Publishing**

ASERS Publishing is committed to pursuing the highest standards of probity and the elimination of malpractice in research presented within own journals. It is ultimately the responsibility of the editors-in-chief to ensure that this policy is disseminated to all and followed through. If any third party believes that malpractice has occurred, they are encouraged to

contact the Editors-in-Chief of the journal. Where malpractice has been found to occur, the article in question will be removed from the journal. Individuals found to have deliberately undertaken actions that result in malpractice will be excluded from publishing in the Journal in the future.

▪ **Information on sanctions:**

**Trade Sanctions and Publishing**

ASERS Publishing is committed to the principles of freedom of expression and we believe strongly in the international dimension of science. Sharing information about science and health improves lives and creates new insight and value. We acknowledge that governments have legitimate interests in promoting human rights, security and terrorism concerns, the rule of law, and preventing the proliferation of weapons of mass destruction. We are committed to finding a balance between these interests, which will sometimes involve challenging government over-reach or over-interpretation.

**Countries/Entities affected**

It is important to understand that several countries maintain lists of individuals and entities with whom it is illegal to conduct business, and more than one law can apply to an individual transaction. Additionally, several countries also implement controls on the export of 'dual use' items (goods, services and technologies): these are items which have commercial but also potentially military or proliferation applications, even if not obvious, for instance nuclear related software like MCNP-derivate codes and ORIGEN code. If you are a customer or an author from one of the following countries, you might be affected by these trade sanctions and export control laws: Iran, Cuba, Sudan, Burma, Syria or Crimea. Further, if you have been identified by such governments as a person or an entity involved in some of the activities noted above, you may also be affected by such laws.

**Information Materials Exemption/General Publishing License re US imposed Embargoes**

The US sanctions laws include an Information Materials Exemption and a General License for Publishing. Such exemption and license permits a broad range of publishing activities for academic researchers for book and journal publishing, and also permits the sale of such material into countries where such US sanctions apply. Certain services such as training are not allowed, and software may also have some restrictions.

The exemption does not apply to, and therefore an embargo applies to, individuals or legal entities specifically identified (by either the US or the EU) as being involved in security or rights issues ('Specially Designated Nationals'). Individuals employed by a Specially Designated National would fall under this embargo, unless the individual is acting, and e.g. submits a manuscript on its own behalf and not on behalf of the Specially Designated National.

If you are an author located in a sanctioned country, and you are not a Specially Designated National, your article may be edited or published in an ASERS Publishing journal or book if:

- You are acting in your personal capacity, in other words 'not as an official representative or otherwise on behalf of a sanctioned government'; or
- You are acting on behalf of your government institution, where the primary function of the institution is education or research; or
- You are publishing on behalf of your government agency, where that agency is not primarily an educational or research institution and the editor, reviewer or publisher does not provide substantive editing (i.e. substantive or artistic alteration or enhancement of the work).

**4. The Manuscript**

**4.1. Delivery of Manuscript**

The 'Author' agrees to deliver the manuscript of the 'Article' to the 'Publisher' in the US English language in its entirety (hereinafter 'Manuscript') in .doc(x) format file and formatted as in the requirements of Author's Guideline of the Journal via the Platform by *Registering* and *Logging in* <https://journals.aserspublishing.eu/jarle/index> (the Date of Submission of the 'Manuscript' is 'Initial Delivery Date'). The 'Manuscript' shall otherwise be acceptable to Publisher in form and content, after a double – blind peer review process.

**4.2. Artwork, Permissions, and Other Materials**

The 'Author' shall deliver to the 'Publisher', at Author's sole expense, not later than the Initial Delivery Date or such other date(s) as may be designated by 'Publisher', each of the following:

**4.2.1.** Original art, illustrations, maps, charts, photographs, or other artwork (collectively 'Artwork'), in a form suitable for reproduction, in editable format.

**4.2.2.** Acknowledgements; Abstract; Introduction; Sections entitled in relevant way for the research; Conclusions and Further Research; References.

**4.2.3.** Written authorizations and permissions for the use of any copyrighted or other proprietary materials (including but not limited to Artwork) owned by any third party which appear in the 'Article' and written releases or consents by any person or entity described, quoted, or depicted in the 'Article' (collectively 'Permissions').

**4.2.4.** If the 'Author' fails or refuses to deliver the Artwork, Permissions, or other material required to be delivered by the Author under this Agreement, the 'Publisher' shall have the right, but not the obligation, to acquire or prepare any and all such matter, or to engage a skilled person to do so, and the 'Author' shall reimburse the 'Publisher' for all costs and expenses incurred by the Publisher in doing so or to refuse to publish the 'Article'.

**4.2.5.** The 'Author' acknowledges and confirms that the 'Publisher' shall have no liability of any kind for the loss or destruction of the Manuscript, Artwork, or any other documents or materials provided by the 'Author' to the 'Publisher', and agrees to make and maintain copies of all such documents and materials for use in the event of such loss or destruction.

#### **4.3. Publisher's Rights on Delivery**

If the 'Publisher', in its sole discretion, deems the 'Manuscript', Artwork, Permissions and/or any other materials delivered by the 'Author' under this Agreement to be unacceptable in form or substance, then the Publisher shall so advise the 'Author' by written notice, and the 'Author' shall have the opportunity to cure any defects and generally revise, correct, and/or supplement the Manuscript, Artwork, Permissions and/or other materials to the satisfaction of the 'Publisher', and deliver the fully revised, corrected and/or supplemented Manuscript, Artwork, Permissions and/or other materials no later than 30 days after receipt of the Publisher's notice ('Final Delivery Date'). If such revised, corrected and/or supplemented materials are not delivered in a timely manner, or if they are deemed unsatisfactory in form or substance by the 'Publisher', then the 'Publisher' shall have the unqualified right to terminate this Agreement without further obligation to the 'Author'.

#### **4.4. Termination for Non-delivery or Unsatisfactory Delivery**

If the 'Author' fails to deliver the Manuscript, Artwork, Permissions, and/or other materials required under this Agreement, and/or any revisions and corrections thereof as requested by the 'Publisher', on the dates designated by the 'Publisher', or if the 'Author' fails to do so in a form and substance satisfactory to the 'Publisher', then the 'Publisher' shall have the right to terminate this Agreement by so informing the 'Author' by e-mail to the 'Author' set forth below. Upon termination by the Publisher, the 'Author' shall, without prejudice to any other right or remedy of the 'Publisher', all rights granted to the 'Publisher' under this Agreement shall revert to the 'Author'.

### **5. Reviewing process**

#### **5.1. Reviewing process follows these steps:**

- 1st Step: The Editor in Chief will make an initial screening of the paper submitted in order to determine if it is suitable with the scope and the aims of the journal.
- 2nd Step: The submission received will be checked with the anti-plagiarism software before will undergo a double blind peer reviewing process. If the report indicates suspicious, the paper will be rejected, else will follows next stage.
- 3rd Step: The paper is double-blind peer reviewed by the members of Editorial Advisory Board, according with the area of research indicated by the JEL Classification specified by the author in its paper.
- 4th Step: The final decision is made by the Editor in Chief based on the recommendations and comments of reviewers. The Editor in Chief decides whether the paper should be accepted as it is, revised (with minor or major corrections) or rejected. Any changes which affecting the substance of the text will, of course, only be made in agreement with the author.

The reviewing process usually takes between 3 and 6 weeks but sometimes, due to number of papers, complexity of research submitted could be up to 10 weeks. If the Reviewing process takes more than 10 weeks, the 'Author' could withdrawal the 'Article' without any claim from the 'Publisher'.

#### **5.2. Duties of Authors:**

- Submitted manuscripts must be the original work of the author(s);
- Only unpublished manuscripts should be submitted;
- It is unethical to submit a manuscript to more than one journal concurrently;
- Any conflict of interests must be clearly stated;
- Acknowledge the sources of data used in the development of the manuscript;
- All the errors discovered in the manuscript after submission must be swiftly communicated to the Editor in Chief of the Journal.

#### **5.3. Duties of Reviewers:**

- That all the manuscripts are reviewed in fairness based on the intellectual content of the paper regardless of gender, race, ethnicity, religion, citizenry nor political values of author(s);
- That any observed conflict of interest during the review process must be communicated to the Editor in Chief of the Journal;
- That all information pertaining to the manuscript is kept confidential;

- That any information that may be the reason for the rejection of publication of a manuscript must be communicated to the Editor.

#### **5.4. Duties of Editors:**

- That all the manuscripts are evaluated in fairness based on the intellectual content of the paper regardless of gender, race, ethnicity, religion, citizenry nor political values of authors;
- Any observed conflict of interest pertaining manuscripts must be disclosed;
- That information pertaining manuscripts are kept confidential;
- The editor should respect the intellectual independence of authors.

The Editorial Board takes responsibility for making publication decisions for submitted manuscripts based on the reviewer's evaluation of the manuscript, policies of the journal editorial board and legal restraint acting against plagiarism, libel and copyright infringement.

### **6. Acceptation for publication and editorial fees**

#### **6.1. Acceptation/Rejection for publication**

The Editor in Chief of the Journal will inform the 'Author' about the reviewers' feed-back regarding the Acceptation with minor or major corrections/ or without corrections, or about the rejection of the 'Manuscript'.

In case of corrections, the 'Author' shall make all the necessarily corrections mentioned by the Editor in Chief as the feed-back from the reviewing process, in the frame of time mentioned by the Editor in Chief. If for objective reasons, the 'Author' could not perform the corrections, the 'Article' will be postponed for publication in the following issue of the Journal.

#### **6.2. Publication and Editorial Fee**

Editorial fee for publication is 400 euro. This fee includes: editorial services, double peer review services for each submitted research, proof-reading in US English, indexation services in scientific databases in which the Journal is currently indexed, each published research will have assigned a DOI for a better dissemination and visibility of the author(s) in global academic community, and a better ranking of citations of Research Centre's authors.

### **7. Publication**

#### **7.1. Editing**

The 'Publisher' shall have the right to edit and revise the 'Article' for any and all uses contemplated under this Agreement, and the 'Author' will have the right to review and alter the editing so that the edited 'Manuscript' is reasonably and substantially acceptable to the 'Author'.

#### **7.2. Publishing Details**

The 'Publisher' agrees that the 'Author' shall have the right to review and approve or disapprove the title of the 'Article' or sections of the 'Article' or any other parts of the 'Article', and the 'Author' shall be reasonably consulted on 'Article' design in Journal form. The 'Publisher' shall have the right to manufacture, distribute, advertise, promote, and publish the 'Article' in a style and manner which the 'Publisher' deems appropriate, including typesetting, paper, printing, binding, cover and/or jacket design, imprint, title, and price. Not with standing any editorial changes or revisions by the 'Publisher', the 'Author's' warranties and indemnities under this Agreement shall remain in full force and effect.

#### **7.3. Proofs**

'Publisher' shall furnish the 'Author' with page proofs of the 'Article', including Cover, Contents of the Issue and Artwork. The Author agrees to read, correct, and return all page proofs within 7 calendar days after receipt thereof. If any changes in the page proofs (other than corrections of typographical errors) are made at the 'Author's' request or with the 'Author's' consent, then the cost of such changes in excess of 5% of the cost of typesetting (exclusive of the cost of setting corrections) shall be paid by the 'Author'. If the 'Author' fails to return the corrected page proofs within the time set forth above, the 'Publisher' may publish the 'Article' without the 'Author's' approval of the page proofs.

#### **7.4. Time of Publication**

The 'Publisher' agrees that the 'Article', if published, shall be published within 12 months of the Final Delivery Date, except as the date of publication may be extended by forces beyond 'Publisher's' control. The date of publication as designated by the 'Publisher', but not later than the date of first delivery of bound volumes, shall be the 'Publication Date' for all purposes under this Agreement.

#### **7.5. Author's Copies**

The Author shall receive the galley in .pdf format, free of charge, of the initial edition of the Journal's Issue for personal and marketing use and to send to persons who have endorsed, contributed to, or otherwise supported the 'Article'.

### 7.6. Use of Author's Name and Likeness

The 'Publisher' shall have the right to use, and to license others to use, the 'Author's' name, image, likeness, and biographical material for advertising, promotion, and other exploitation of the 'Article' and the other rights granted under this Agreement.

### 8. Indexing and Abstracting

The 'Publisher' will send the metadata for indexing and abstracting the 'Article' in the current databases in which the Journal is indexed. The databases in which the Journal is indexed are posted in a visible place on the Journals' website, and inside the Journal first pages. Moreover, the 'Publisher' will make all the diligences in order to index the Journal in all the databases in which is currently indexed.

### 9. Applicable Law

Regardless of the place of its physical execution, this Agreement shall be interpreted, construed, and governed in all respects by the laws of Romania and European Union.

### 10. Execution

IN WITNESS WHEREOF, the 'Corresponding Author' and the 'Publisher' have executed this Agreement on the day and year below, to be effective immediately if the dates are the same, or on the date of the later signature if the dates are not the same. If either the 'Author' or the 'Publisher' has electronic signature capabilities and both agree to accept an electronic signature as valid, that electronic signature will be considered of identical weight to a handwritten signature.

# Call for Papers

## Volume IX, Issue 7(45) and Issue 8(46), Winter 2019

### Journal of Advanced Research in Law and Economics

*Journal of Advanced Research in Law and Economics* is designed to provide an outlet for theoretical and empirical research on the interface between economics and law. The Journal explores the various understandings that economic approaches shed on legal institutions.

*Journal of Advanced Research in Law and Economics* publishes theoretical and empirical peer-reviewed research in law and economics-related subjects. Referees are chosen with one criterion in mind: simultaneously, one should be a lawyer and the other an economist. The journal is edited for readability both lawyers and economists scholars and specialized practitioners count among its readers.

To explore the various understandings that economic approaches shed on legal institutions, the Review applies to legal issues the insights developed in economic disciplines such as microeconomics and game theory, finance, econometrics, and decision theory, as well as in related disciplines such as political economy and public choice, behavioral economics and social psychology. Also, *Journal of Advanced Research in Law and Economics* publishes research on a broad range of topics including the economic analysis of regulation and the behavior of regulated firms, the political economy of legislation and legislative processes, law and finance, corporate finance and governance, and industrial organization.

Its approach is broad-ranging with respect both to methodology and to subject matter. It embraces interrelationships between economics and procedural or substantive law (including international and European Community law) and also legal institutions, jurisprudence, and legal and politico – legal theory.

The quarterly journal reaches an international community of scholars in law and economics.

Submissions to *Journal of Advanced Research in Law and Economics* are welcome. The paper must be an original unpublished work written in English (consistent British or American), not under consideration by other journals.

*Journal of Advanced Research in Law and Economics* is currently indexed in SCOPUS, EconLit, RePec, CEEOL, EBSCO, ProQuest, and Cabell's Directory.

Invited manuscripts will be due till September 1<sup>st</sup>, 2019, and shall go through the usual, albeit somewhat expedited, refereeing process.

Deadline for submission of proposals:	1 <sup>st</sup> September 2019
Expected Publication Date:	December 2019
Web:	<a href="http://journals.aserspublishing.eu">http://journals.aserspublishing.eu</a>
E-mail:	<a href="mailto:jarle@aserspublishing.eu">jarle@aserspublishing.eu</a>

### Abstract:

Professional mistakes made by a doctor when doing patient care and causing the patient to become injured or die, then the actions of doctors are said to have committed malpractice. The Medical Practice Law provides the right to claim a civil suit to the court. In general, compensation claims are based on civil liability using Article 1365 BW. Article 1365 BW contains liability based on errors and it is not easy to determine when professional errors occur. Article 66 paragraph (3) of the Medical Practice Law stipulates that if there is a malpractice event, there is a possibility that the patient has the right to claim a civil suit to the court. The plaintiff (patient) will get compensation if he succeeds in proving the defendant's (doctor's) mistake, which is difficult for the patient to prove the doctor's fault. To provide objective and balanced legal protection for patients and doctors, the use of the presumption principle is always liable because it is difficult to prove the errors of the doctors. The use of the principle of presumption of being always liable will not burden the doctor because it is possible to use the principle of reverse proof. Doctors can use the principle of reversed evidence if the doctor is not guilty of malpractice by arguing that the doctor has done a good and proper job working professionally, and using the prudential principle.

**Keywords:** fault principle; medical disputes; liability presumptions.

### Introduction

Health care is a basic national interest, because it deals with the realization of people's welfare. Health care needs are getting better along with the progress of a nation. Referring to Article 7 of the Health Law expressly states that the government must implement equitable and affordable health efforts, and be responsible for increasing the level of public health. The meaning of Article 27 paragraph 2 of the 1945 Constitution, namely 'everyone has the right to have a decent job and life or human being' implies the need for a decent life in obtaining health services. As a national interest, especially related to achieving public welfare, it is imperative that the function of law has an important role in protecting national interests and in creating public welfare (Indar, 2013). In order to realize legal functions as 'social integration', it is expected that the provision of health services can be guaranteed by the patient's

interests and without harming the interests of other parties. The doctor's profession is a noble profession, so doctors serve by prioritizing the interests of others and society. Therefore, the noble profession is only entrusted to people who are polite, respectable, and have a paternalistic spirit (Trisnadi 2017). Conboy *et.al.* (2010), and in He and Jiwei Qian (2016), stated that *'the doctor-patient relationship is central to the practice of medicine and vital for the delivery of health services. Many studies have found that healthy interactions between physicians and patients can greatly enhance the quality of care and patients' well-being'*. Kaba and Sooriakumaran (2007), cited in He and Jiwei Qian (2016), stated that *'with the remarkable transformation of the doctor-a patient relationship from benevolent paternalism to one characterized by contractual consumerism, recent decades have witnessed a surge of medical disputes worldwide'*. The relationship between law and medicine is not all negative, but the law has contributed significantly to patient rights and medical practice (Rabinovich-Ein 2011). After a doctor has a license to practice, there is a legal relationship for the implementation of medical practices that each party (patient and doctor) has autonomy (freedom, rights and obligations) in having two ways of communication and interaction. The law provides protection for both parties through a legal instrument called informed consent. According to the Minister of Health Regulation Number 290/MENKES/PER/III/2008 that medical approval is an agreement given by a patient or close family after getting a full explanation of the action of medicine or dentistry to be performed on the patient. Informed consent (or medical approval) is an agreement given by the patient or their family based on an explanation of the medical action to be performed on the patient. The object in legal relations is health services to patients (Iswandari 2006). In contrast to the legal relationship in general, the legal relationship between patients and doctors (and dentists) is a maximum effort for the recovery of patients who are carried out carefully (meeting with a doctor), so that the legal relationship is called a business or raises business engagement.

In the concept of civil law, compensation can be submitted because there is default or because of an unlawful act. Therefore, the form of responsibility in civil law can be classified into two, namely first, contractual responsibilities, and second, responsibility for unlawful actions. The difference between contractual responsibility and the responsibility for illegal actions is whether or not there is an agreement in legal relations. If there is agreement, responsibility is contractual responsibility (Agustina *et al.* 2012; Hernoko 2016). Whereas if there is no agreement, there are parties who harm other parties with the principle of illegal acts. Examples of unlawful actions are if a surgeon for negligence has left gauze or tools in the patient's body so that the patient has an infection which results in the patient suffering even because the complications that occur cause the patient to die (Astuti 2017).

In a contractual legal perspective, it is said that *'Contract agreement obligation is the primary means for the parties to create their legal norms that will rule the behavior of their own. Rights and obligations arising from the contract are determined by what is mutually agreed (exchanged) by the parties through their statements'* (Hernoko *et al.* 2017). The relationship between doctors and patients in the implementation of medical practice is known as legal relations. Legal relations in the context of engagement law constitute an agreement that occurs from the agreement. Therefore, the legal relationship between doctors and patients occurs from a therapeutic agreement. The agreement known in the field of health services is a therapeutic agreement (transaction). Therapeutic agreements are agreements between doctors and patients, in the form of legal relationships that cause rights and obligations for both parties. Objects in this agreement are therapeutic efforts for patient recovery (Nasution 2005). In the therapeutic agreement, both doctors and patients have the rights and obligations that must be fulfilled. The rights and obligations of doctors and patients are regulated in Articles 50 to 53 of Law Number 29 of 2004 (Nuryanto 2012). Thus, if the therapeutic agreement is not met by a doctor, the patient will claim on the legal basis that there is an omission or error.

In agreement legal theory, there are 2 (two) types of agreements, namely: 1. Business engagement, it is an agreement where each party gives maximum effort to reach the intended agreement. In this case, the priority is business, and 2. Engagement of results, it is an agreement based on agreed results, meaning that each party gives the best effort to achieve what has been agreed. In this case, the priority is results.

In such contractual relationships, there may be achievements provided by service providers that cannot be measured but there are also benefits provided by service providers that can be measured (some of which are generated by businesses). In line with Sidharta, which states that the types of services provided in the relationship between professional service providers and users of professional services can be divided into two types of services: promised services to produce something and services that are committed to striving for something (Shidarta 2009). If the two types of agreements above are linked to a therapeutic agreement, then the therapeutic agreement can be categorized in the business agreement, because the doctor will be difficult or impossible to be required to be able to cure his patients. So, what is demanded from a doctor is maximum effort and earnest in doing healing based on good medical science standards. Likewise, for patients, they are required to try to carry out recommendations and doctor's orders so that the pain can be cured. Both parties, namely doctors and patients are required to try as

much as possible to cure an illness. Although the legal relationship between the patient and the doctor is not based on the results but rather on the effort that must be made, it is implied that the effort that must be made is an effort that is in accordance with the applicable standards. Even though the legal relationship between doctors and patients is a maximum effort, it is possible for compensation claims to be based on violating the law that the doctor must account for from the aspect of civil law.

Whereas the lawsuit filed under the law violates the law based on Article 1365 BW, generally addressed to doctors who perform medical malpractice. According to Munir Fuady, as quoted by Bambang Heryanto, that malpractice has an understanding that every medical action is carried out by doctors for patients, both in terms of diagnosis, therapy and management of diseases carried out in violation of law, propriety, decency, and professional principles intentional or not intentional or misdirected which causes pain, disability, bodily injury, death and other damage that causes the doctor to be responsible for administrative, civil or criminal responsibility, generally carried out in cases of medical malpractice. Hermien Hadiati Koeswadiji quoted the opinion of John D. Blum as saying that medical malpractice is one form of professional negligence that patients can be asked to compensate for in the event of an injury or disability caused directly by the doctor in performing measurable professional actions (Heryanto 2010). In fact, it is not easy to establish the existence of malpractice that there is professional negligence carried out by the doctor at the time of the treatment and there are others who are harmed by the actions of the doctor.

The law does not impose restrictions on illegal acts, which must be interpreted by the court. Initially it was intended that anything that was against the law would be illegal. However, since 1919, a court ruling that has given an understanding that an act or negligence with one of: (1) violates the rights of others; (2) contrary to the legal obligations of the perpetrator; (3) violating morals is generally adopted from good habits; (4) not in accordance with propriety in social life. A doctor can be wrong. To determine the offender must pay compensation, there must be a close relationship between errors and losses that occur. That in order to be able to claim losses (compensation) due to negligence of the doctor, the patient must be able to prove the following four elements: (1) there is an obligation for doctors to service their patients; (2) doctors have violated the usual medical service standards; (3) plaintiffs (patients) suffer losses that can be requested for compensation from pain, disability, bodily injury, death and other damage; (4) the fact that pain, disability, bodily injury, death and other damage is caused by sub-standard actions. To prove the existence of an action below the standard of health services by the patient (plaintiff) is an effort that is not easy because the patient has no knowledge of it. The case involving Dr. Yenny Wiyarni Abbas, Spa who was sued by Ibrahim Blegur for the death of his son named Ananda Falya Rafani Blegur based on illegal acts for medical treatment. By Dr. Yenny Wiyarni Abbas, Spa was appealed with a lawsuit Number 462/Pdt/2016/PT.BDG and was decided by the Bandung High Court, that Dr. Yenny Wiyarni Abbas, Spa found no errors, because there was no substantial medical evidence.

Based on the description above, legal issues are formulated as follows:

- (1) What are the elements of liability based on faults in medical disputes?
- (2) What is the urgency to use the principle of presumption of liability principle to medical disputes?

### **1. Elements Liability Based on Fault on Medical Dispute**

Implicitly Article 66 paragraph (1) of Law No. 29 of 2004 concerning Medical Practice explains that medical disputes are disputes that occur because the interests of patients are harmed by the actions of doctors who carry out these medical practices. Medical disputes in health services provide legal consequences that require the responsibility of the doctor. The legal responsibility of a doctor arises when medical negligence occurs with a doctor. The attitude or action can be interpreted as doing something that is not supposed to be done or not doing something that should be done or not doing something that is a reasonable person based on ordinary considerations that generally regulates human events, will do, or have done something natural and heart careful it just won't do. In fact, in handling patients, there is often a different perspective between patients and doctors with lawsuits or claims to doctors who have committed medical negligence (Nasser 2011).

The aspect of civil law regarding a patient's claim to a doctor who handles it is almost a matter of compensation claims. Article 1365 BW states that every act that violates the law, which brings harm to another person, requires that the person who caused the wrongdoing to issue the loss compensates for the loss. Unlawful acts in its development have developed into 4 (four) criteria, first, violating the rights of others; or second, contrary to the legal obligations of the perpetrator; or third, violating the rules of moral conduct; or fourth, which contradicts courtesy, carefulness and caution that a person must have in relation to fellow citizens or with other people's property.

If a patient who feels aggrieved wants to file a lawsuit based on an unlawful act against the doctor, then he must prove that there has been an unlawful act with the criteria mentioned above. In addition, patients also have to

prove that there is a causal relationship between violating the law and the loss suffered. A claim that is based on an unlawful act can be directed against the perpetrator of the act itself, because he made a mistake, negligence, was not careful which caused harm to others. Claims can also be directed against people responsible for their dependents or their items under their control.

Therefore, the reason for the lawsuit is not appropriate if it is only based on Article 1365 Burgerlijk Wetboek (Indonesian Civil Code), but also based on Article 1366 Burgerlijk Wetboek. This is caused by theory or doctrine, medical malpractice by doctors, consists of three things (Wahyudi 2011). First, Intentional Professional Misconducts, who are found guilty/bad practice if the doctor practices violations of standards and is done intentionally. Doctors practice by ignoring standards and intentional. Practice doctors by ignoring standards in existing rules and there is no element of negligence. Secondly, Negligence or unintentional negligence, namely a doctor who is due to negligence resulting in a patient's disability or death. A doctor fails to do something that must be done in accordance with medical science. This category of malpractice can be prosecuted, or punished if proven in court. Third, Lack of Skill, i.e. doctors take medical action but are incompetent or less competent.

The definition of the element of error referred to in Article 1365 BW based on the concept of civil law about this error can be distinguished between the definition of errors in the broadest sense and understanding errors in the narrow sense. The meaning of error in the broadest sense is to enter intentions and neglect. The meaning of intention is that the action taken is known and desired by the perpetrator. Whereas negligent understanding is an action in which the perpetrator knows the possible consequences that harm others (Setiawan 2008).

Negligence is a form of accidental error, but it is also not something that happens by accident. In this omission, there is no malice from the perpetrator. Negligence in carrying out medical actions causes patient dissatisfaction with doctors in making treatment efforts in accordance with the medical profession. Such negligence causes loss on the part of the patient. Thus, a doctor other than being the subject of civil liability on the basis of default and violating the law can also be prosecuted on the basis of negligence, which results in a loss. The claim on the basis of this negligence is provided in Article 1366 BW, which reads as follows: 'A person is responsible, not only for damage caused by his actions but also for those caused by negligence or carelessness.'

Law Number 36 of 2009 concerning Health regulates matters relating to the issue of negligence of health personnel in Article 29 and Article 58. Article 29 of Law Number 36 of 2009 stipulates that in the case of health workers suspected of committing negligence in carrying out their profession. Such negligence must be resolved before mediation. Article 58 of Law Number 36 Year 2009 regulates the right of every person to claim compensation to someone, health worker, and/or health service provider who experiences loss due to intentional or negligent health services received. Based on this provision, it appears that prosecution is directed at a person, health worker or health provider (hospital). In the context of violating the law, the hospital can be said to be a 'participating (guilty)' party. Unlawful acts committed by two or more people because there are parties who are referred to as participating (participating) guilty. When there are parties declared guilty, then the determination of liability is based on: (1) how much each joint actor must compensate for the loss suffered by the injured party (patient); and (2) determination of the joint actors dividing the burden of losses among them. Regarding the first thing, each actor is liable for the loss for all losses, with the understanding that if one of them has paid, the other is free from the obligation to pay, while in terms of the two obligations each actor is determined by the weight of each mistake (Nieuwenhuis 1985).

Meanwhile, based on Law Number 44 of 2009 concerning Hospitals, compensation claims are only addressed to hospitals, which are caused by negligence of health workers in the hospital. If the losses incurred by intentional health workers at the hospital, compensation claims cannot be made to the hospital. The hospital will not be responsible if the loss is caused by an error in the meaning of an intentional health worker in the hospital (Wahyudi 2011). The patient will file a lawsuit to the hospital if the patient knows and feels aggrieved by the actions of the health worker in the hospital. It is not easy for patients to state that the loss is caused by the actions of health workers. It can be unfortunate to happen to patients who occur unexpectedly by health workers. Health workers have made appropriate and appropriate efforts, and permanent losses to patients, this does not include negligence of health workers. Therefore, the patient must know the medical record so that the form of action taken by the health worker can be known to him. The liability charged to the hospital for the mistakes of doctors who work in hospitals is known as the principle of vicarious liability/corporate liability. The principle of vicarious liability means that the employer is liable for the loss of another party caused by the people/employees who are under his supervision. Meanwhile, the principle of corporate liability is defined as a corporation that houses a group of workers who have responsibility for the workers employed. In determining the existence of vicarious liability/corporate liability according to Paula Giliker it is needed 'a relationship by which one may be liable for the harmful acts of others; the commission of wrongdoing by the employee or subordinate; and that liability is confined to a specific set of circumstances, be it within the course of employment (Giliker 2011).

The burden of proof when applying Article 1365 BW is given to patients or families of patients so that they will have difficulty in proving an element of error with the doctor. Thus, it is necessary to think about the use of other concepts of responsibility, meaning that they are not based on the element of error.

## 2. The Presumption of Liability Principle in Medical Disputes

The use of Article 1365 BW gives the position of 2 parties, namely the perpetrator and the victim. The system of proof of the concept of liability based on errors incriminates victims as plaintiffs. The new plaintiff will receive compensation if he succeeds in proving the defendant's wrongdoing. In addition, proof of the element of causality between the act and the loss of the victim is borne by the victim as the plaintiff. This is in accordance with the evidentiary load system regulated in BW, namely Article 1865 BW. The proof system as stipulated in Article 1865 BW is also regulated equally in the Civil Procedure Law, namely Article 163 Herzien Inlandsch Reglement (HIR) or Article 283 Rechtreglement voor de Buitengewesten (RBg).

Filing a claim using Article 1365 BW for civil cases or civil disputes faces juridical weaknesses, namely the burden of proof of the element of error and the causal relationship made by the plaintiff. In a civil case, it is very difficult for the victim when he has to explain scientifically or technically the causal relationship between the defendant's actions (which contain elements of error Article 1365 BW or negligence Article 1366 BW) and the loss of the victim.

Basically, legal protection for doctors and patients is placed in an objective and balanced position. If you use the concept of liability based on errors (Article 1365 BW) it will be very difficult for the position of the patient (victim) to be able to prove the doctor's fault when the doctor does malpractice. According to Peter Mahmud Marzuki, liability is a certain form of responsibility. The definition of liability refers to the position of a person or legal entity that is considered to have to pay compensation after a legal event or legal action. For example, a person or other legal entity for committing an illegal act so that it can endanger the person or other legal entity. The term liability lies in the scope of private law (Marzuki 2008). Therefore, in order to face difficulties in proving errors (including proof of negligence based on Article 1366 BW), then the principle of presumption by liability principle is carried out using the principle of presumption. The principle of presumption of liability principle states that the defendant is always liable, until he can prove that he is innocent. Thus, the burden of proof is with the defendant (Sidharta 2009).

The use of the presumption principle is always liable because it is difficult to prove medical errors or medical negligence to the doctor or hospital. The relationship between the doctor and the hospital is based on the implementation of the task. Thus, patients can also be protected by the burden of liability to the hospital based on the principle of vicarious liability/corporate liability. It is fair and reasonable to impose vicarious liability on employers, because employers are more likely to have the means to compensate victims than employees, a claim has been made as a result of activities carried out by employees on behalf of the employer. Employee activity tends to be part of the business activity of the employer, the employer by hiring employees to carry out activities will create illegal acts based on the risks carried out by the employee, the employee will, to a greater or lesser extent, be under the control of the employer.

The difficulty in proving the existence of malpractice requires complex and complex medical knowledge, and difficulties in obtaining the patient's medical records. The use of the principle of presumption of being always liable will not burden doctors and/or hospitals because it is possible to use the principle of reversing the burden of proof. Thus, doctors and/or hospitals can use the principle of reversing the burden of proof if the doctor and/or hospital do not feel guilty or negligent of malpractice, on the grounds that the doctor and/or hospital have done the job correctly.

The European Group on Tort Law (EGTL) publishes the Principles of European Tort Law (PETL). PETL as a starting point for the future discussion about the possibility of harmonization or even the unification of law violating the law (tort law) in Europe. The PETL text about proof load is described in the provisions set out in Part 2 of Chapter 4 PETL which reads as follows:

Article 4: 201 Reversal of the burden of proving fault in general

- (1) the burden of proving fault may be reversed in the light of the gravity of the danger presented by the activity;
- (2) the gravity of the danger is determined according to the seriousness of possible damage in such cases as well as the likelihood that such damage might actually occur.

Provisions relating to Article 4: 201 PELT are provisions concerning 'evidence' in Article 2: 105 PETL which states: 'Damage must be proved according to normal procedural standards. 'The damage is too difficult or too costly' (Giesen 2010).

Ivo Giesen (2010) states that the reason for including the principle of the burden of reverse proof in PETL is First, trying to improve the plaintiff's position due to unreasonable difficulties for the plaintiff because of the technical complexity of the defendant's activities and difficult facts to prove. Furthermore, it is said that the reversal of the burden of proof leads to tightening of responsibility and this must be able to be normatively justified. Second, that the burden of this reverse proof implies that the court was given discretionary power. In this case, the Dutch legal regulations are full of discretionary authority with the principle of fairness and justice mentioned in Article 150 of the Civil Procedure Code (Wetboek van Burgerlijke Rechtsvordering), which allows Dutch courts to use their discretionary powers, but provides little guidance on the application of provisions intended.

Ivo Giesen (2010) acknowledged that the Dutch Supreme Court was not possible to use discretion to use the principle of the burden of reversed proof, so the hope was that legislators would amend their legal regulations. Reluctance not to use the principle of burden of reverse proof is easy to understand, because the rationale for proof reversal theory is that someone is considered guilty, until the person concerned can prove otherwise. This is certainly considered to be contrary to the presumption of innocence principle. However, the principle of reverse proof that will be used by doctors and/or hospitals in medical disputes is very relevant. This is to provide legal protection between doctors and patients proportionally and balanced. Proportional and balanced legal protection creates a distribution based on the principle of proportionality. According to Hans Kelsen, if the actions of an individual have caused a harmful effect on someone else, basically he can be free from civil sanctions by proving that he does not expect or does not want the harmful consequences of his actions and has fulfilled the legal obligation to take action under normal circumstances, it can avoid these harmful consequences (Kelsen 1961). Proportional and balanced legal protection creates distributive justice. John Rawls tries to formulate two principles of distributive justice, as follows: First, the principle of greatest equality, that everyone must have equal rights to basic freedom to the greatest extent, the same width of freedom for all. This is the most basic (human rights) that everyone must have. In other words, only with the guarantee of the same freedom for all people will justice be realized (the principle of rights). The principle of greatest equality, is none other than the principle of equality of rights, is the principle that gives equality of rights and is of course inversely proportional to the burden of obligations that each person has (Taufik 2013). This is according to what John Rawls (1961) stated that 'First, each person is to have the same right to the most extensive compatible with a similar liberty for others. This is as stated by John Rawls that 'First: each person has equal right to the most extensive liberty compatible with a similar liberty for others'. Second, social inequality, the economy must be arranged in such a way. By John Rawls (1961) it is said that 'Second: social and economic inequalities are to be arranged so that they are both: (a) which is expected to be everyone's advantage; and (b) attached to positions and offices open to all'. Thus, the following two principles need to be considered, namely the principle of difference and the principle of equal and fair opportunities. Both are expected to provide the greatest benefits for the less fortunate. The principle of equal and equitable difference and principle of opportunity is the principle of objective difference, meaning that the second principle ensures the realization of proportionality of the exchange of rights and obligations of the parties, so that (objective) differences of exchange can be accepted as long as they meet the requirements of good and fair faith. Thus, the first principle and the second principle cannot be separated from the others. In accordance with the principle of proportionality, Rawls justice will be realized if both conditions are applied comprehensively. Medical disputes require respect for patient autonomy and treat patients as equal partners in managing patient health. Provide opportunities for disputing individuals to present their narratives in a non-confrontational environment (Kumaralingam 2017). Barnes (2010) stated that 'facility liability for failure to take relatively inexpensive recommended precautions is warranted'.

If the principle of the burden of reverse proof is used in medical disputes, the obligation to prove the element of medical error or medical negligence is carried out by the doctor and/or hospital as the defendant. The defendant must show proof that he is innocent or innocent. This manifests distributive justice by using the principle of difference and the principle of equal and fair opportunities, and fulfilling the requirements of good and reasonable intention.

Medical disputes are unpleasant events for doctors. Medical disputes are the occurrence of clinical risks in patients, such as adverse clinical events or medical errors. The Indonesian Medical Council has provided guidelines in the form of Medical Practice Guidelines, Doctors and Dentists in Indonesia, which prevent clinical risk by applying the precautionary principle. The principle of prudence includes: (1) trying to remain a good doctor; (2) trying to always practice good medicine; (3) coupled with implementing special programs, such as: Patient Safety, Quality Assurance, Continuous Medical Education, Development Continuing Professionals, Sustainable Clinical Risk Management, Medical/Clinical Audit, Performance Audit, Learning from one's own mistakes and those of others.

## Conclusion

The use of responsibility based on the principle of error will make it difficult for patients to prove a doctor's or hospital's fault or negligence in the event of malpractice. The use of the presumption principle is always liable for asking for civil liability for doctors and/or hospitals if malpractice occurs will provide legal protection between doctors and or hospitals with patients in proportion and balance. Doctors and/or hospitals are given the means to prove that they are innocent of malpractice with the principle of the burden of reversed proof. Indeed, the use of the principle of the burden of reversing proof will conflict with the principle of presumption of innocence. However, to protect patients due to unreasonable difficulties for patients due to the technical complexity of doctor's activities and difficult facts to prove, then the courage of judges to use the principle of the burden of reverse proof based on discretion and freedom of judges. For doctors in conducting medical practice, they must pay attention to the principle of caution by applying guidelines issued by the Indonesian Medical Council.

## Abstract

Professional mistakes made by a doctor when doing patient care and causing the patient to become injured or die, then the actions of doctors are said to have committed malpractice. The Medical Practice Law provides the right to claim a civil suit to the court. In general, compensation claims are based on civil liability using Article 1365 BW. Article 1365 BW contains liability based on errors and it is not easy to determine when professional errors occur. Article 66 paragraph (3) of the Medical Practice Law stipulates that if there is a malpractice event, there is a possibility that the patient has the right to claim a civil suit to the court. The plaintiff (patient) will get compensation if he succeeds in proving the defendant's (doctor's) mistake, which is difficult for the patient to prove the doctor's fault. To provide objective and balanced legal protection for patients and doctors, the use of the presumption principle is always liable because it is difficult to prove the errors of the doctors. The use of the principle of presumption of being always liable will not burden the doctor because it is possible to use the principle of reverse proof. Doctors can use the principle of reversed evidence if the doctor is not guilty of malpractice by arguing that the doctor has done a good and proper job working professionally, and using the prudential principle.
